Subject index

A priori price-adjustment information * Estimating disequilibrium models with limited ___. Walter J. Mayer **41** (1989) 303–320

Absolute error estimation * Least ___ in the presence of serial correlation. Andrew A. Weiss **44** (1990) 127–158

Accelerated life models * Analysis of survival data: Estimation and specification tests using asymptotic least squares. H. Jayet and A. Moreau **48** (1991) 263–285

Actuarial and regression methods * A statistical perspective on insurance rate-making. Cheng Hsiao, Changseob Kim, and Grant Taylor **44** (1990) 5–24

Adaptive empirical Bayes estimator * An ___ of the multivariate normal means under quadratic loss. G.G. Judge, R. Carter Hill, and M.E. Bock **44** (1990) 189–213

Adjusted data * Robust estimation based on grouped-___ in censored regression models. Kazumitsu Nawata **43** (1990) 337–362

Adjusted dependent variables * Robust estimation based on grouped-adjusted data in linear regression models. Kazumitsu Nawata **43** (1990) 317–336

Adjusted test statistics * Forecasting with demand systems: A comparative study. Marcus J. Chambers **44** (1990) 363–376

Adjustment-costs model * An ___ of export supply and import demand. Denis Lawrence **46** (1990) 381–398

Aggregate demand estimation * Goodness-of-fit in optimizing models. Hal R. Varian **46** (1990) 125–140

Aggregate money illusion * Income distribution movements and ___. Arthur Lewbel **43** (1990) 35–42

Aggregation

Cluster analysis for measuring welfare and quality of life across countries. Joseph G. Hirschberg, Esfandiar Maasoumi, and Daniel J. Slottje **50** (1991) 131–150

Residual risk revisited. Bruce N. Lehmann **45** (1990) 71–97

Aggregation and identification in consumer demand systems. J.M. Heineke and H.M. Shefrin **44** (1990) 377–390

Aggregation error * A dispersion-dependency diagnostic test for ___ : With applications to monetary economics and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34

Aggregation theorem * Income distribution movements and aggregate money illusion. Arthur Lewbel **43** (1990) 35–42

Aggregator functions * Generalized entropy measures of mobility for different sexes and income levels. Esfandiar Maasoumi and Sourushe Zandvakili **43** (1990) 121–133

Air pollution data * Effects of collinearity on information about regression coefficients. Ehsan S. Soofi **43** (1990) 255–274

Allocative efficiency * Production frontiers, panel data, and time-varying technical inefficiency. Subal C. Kumbhakar **46** (1990) 201–211

Almost ideal demand system * Ordinal and cardinal utility: An integration of the two dimensions of the welfare concept. Bernard M.S. van Praag **50** (1991) 69–89

Analogue model * An ___ of phase-averaging procedures. Julia Campos, Neil R. Ericsson, and David F. Hendry **43** (1990) 275–292
Analysis-of-covariance estimators * Grouped-data estimation and testing in simple labor-supply models. Joshua D. Angrist **47** (1991) 243–266
Analysis of variance model
Estimation of time-dependent parameters in linear models using cross-sections, panels, or both. Theo Nijman and Marno Verbeek **46** (1990) 333–346
The efficiency of rotating-panel designs in an ___. Theo Nijman, Marno Verbeek, and Arthur van Soest **49** (1991) 373–399
Analytical and numerical approaches * A Bayesian analysis of simultaneous equation models by combining recursive ___. Mark F.J. Steel **48** (1991) 83–117
Anderson, T.W. * Contributions to econometric methodology in honor of ___. Edited by Dennis J. Aigner. Annals 1990-2 . . . . . **44** (1990) 1–238
Approximate estimator * A note on Park and Heikes' (1983) modified ___ for the first-order moving-average process. Askar H. Choudhury and Robert D. St. Louis **46** (1990) 399–406
Approximate representation * A method for ___ of vector-valued time series and its relation to two alternatives. Masanao Aoki and Arthur Havenner **42** (1989) 181–199
Approximation(s)
ARCH models as diffusion ___. Daniel B. Nelson **45** (1990) 7–38
Testing nonnested Euler conditions with quadrature-based methods of ___. Eric Ghysels and Alastair Hall **46** (1990) 273–308
AR(1) errors * Optimal invariant tests for the autocorrelation coefficient in linear regressions with stationary or nonstationary ___. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
AR(1) model * A Bayesian analysis of the unit root in real exchange rates. Peter Schotman and Herman K. van Dijk **49** (1991) 195–238
AR(1) process * Limiting power of unit-root tests in time-series regression. Seiji Nabeya and Katsuto Tanaka **46** (1990) 247–271
Arbitrage pricing theory * A Bayesian approach to testing the ___. Robert McCulloch and Peter E. Rossi **49** (1991) 141–168
ARCH covariance structure * Asset pricing with a FACTOR-___ : Empirical estimates for Treasury bills. Robert F. Engle, Victor K. Ng, and Michael Rothschild **45** (1990) 213–237
ARCH models as diffusion approximations. Daniel B. Nelson **45** (1990) 7–38
ARIMA models * Unit-roots tests for time-series data with a linear time trend. Said E. Said **47** (1991) 285–303
ARMA processes * The implications of periodically varying coefficients for seasonal time-series processes. Denise R. Osborn **48** (1991) 373–384
ARMA(p,q) errors * Estimation of a linear regression model with stationary ___. Victoria Zinde-Walsh and John W. Galbraith **47** (1991) 333–357
Asset payoffs * Using conditional moments of ___ to infer the volatility of intertemporal marginal rates of substitution. A. Ronald Gallant, Lars Peter Hansen, and George Tauchen **45** (1990) 141–179
Asset pricing
An econometric analysis of nonsynchronous trading. Andrew W. Lo and A. Craig MacKinlay **45** (1989) 181–211
Are consumption-based intertemporal capital ___ models structural? Eric Ghysels and Alastair Hall **45** (1990) 121–139
Intertemporal ___: An empirical investigation. Jay Shanken **45** (1990) 99–120
Asset pricing with a FACTOR-ARCH covariance structure: Empirical estimates for Treasury bills. Robert F. Engle, Victor K. Ng, and Michael Rothschild **45** (1990) 213–237

Asset returns * A Bayesian approach to testing the arbitrage pricing theory. Robert McCulloch and Peter E. Rossi **49** (1991) 141–168
Assurance region concept * The role of multiplier bounds in efficiency analysis with application to Kansas farming. Russell G. Thompson, Larry N. Langemeier, Chih-Tah Lee, Euntaik Lee, and Robert M. Thrall **46** (1990) 93–108
Asymptotic analysis * The Durbin-Watson ratio under infinite-variance errors. Peter C.B. Phillips and Mico Loretan **47** (1991) 85–114
Asymptotic covariance matrices
Identification and estimation of polynomial errors-in-variables models. Jerry A. Hausman, Whitney K. Newey, Hidehiko Ichimura, and James L. Powell **50** (1991) 273–295
Least absolute error estimation in the presence of serial correlation. Andrew A. Weiss **44** (1990) 127–158
Residual risk revisited. Bruce N. Lehmann **45** (1990) 71–97
Asymptotic distribution
A note on the ___ of impulse response functions of estimated VAR models with orthogonal residuals. Helmut Lutkepohl **42** (1989) 371–376
Mallows' C(p) criterion and unbiasedness of model selection. Masahito Kobaysahi and Shinichi Sakata **45** (1990) 385–395
Asymptotic efficiency calculations of the partial likelihood estimator. Aaron K. Han **41** (1989) 237–250
Asymptotic least squares * Analysis of survival data: Estimation and specification tests using ___. H. Jayet and A. Moreau **48** (1991) 263–285
Asymptotic normality
Consistent estimation for some nonlinear errors-in-variables models. Cheng Hsiao **41** (1989) 159–185
On the ___ of Fourier flexible form estimates. A. Ronald Gallant and Geraldo Souza **50** (1991) 329–353
Robust estimation based on grouped-adjusted data in censored regression models. Kazumitsu Nawata **43** (1990) 337–362
Robust estimation based on grouped-adjusted data in linear regression models. Kazumitsu Nawata **43** (1990) 317–336
Asymptotic normality and consistency of semi-nonparametric regression estimators using an upwards F test truncation rule. Brian J. Eastwood **48** (1991) 151–181
Asymptotic optimality of generalized C(L), cross-validation, and generalized cross-validation in regression with heteroskedastic errors. Donald W.K. Andrews **47** (1991) 359–377
Asymptotic power characteristics * A unified approach to estimation and orthogonality tests in linear single-equation econometric models. M. Hashem Pesaran and Richard J. Smith **44** (1990) 41–66
Asymptotic properties * Maximum likelihood estimation of the dynamic shock-error model. Damayanti Ghosh **41** (1989) 121–143
Asymptotic relative efficiency of the classical test statistics under misspecification. Pentti Saikkonen **42** (1989) 351–369
Asymptotic relative efficiency criterion * A unified approach to estimation and orthogonality tests in linear single-equation econometric models, M. Hashem Pesaran and Richard J. Smith **44** (1990) 41–66
Asymptotic standard error * Nonparametric hazard estimation with time-varying discrete covariates. Siu Fai Leung and Wing Hung Wong **45** (1990) 309–330
Asymptotic theory
Linear latent variable models and covariance structures. T.W. Anderson **41** (1989) 91–119
On the Wald tests for globally and locally quadratic restrictions. Gordon C.R. Kemp **50** (1991) 257–272
Spectral based testing of the martingale hypothesis. Steven N. Furlauf **50** (1991) 355–376

Asymptotically equivalent tests * Testing inequality constraints in linear econometric models. Frank A. Wolak **41** (1989) 205–235
Asymptotically ideal production model * Seminonparametric Bayesian estimation of the ___. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
Asymptotics * Small-disturbance ___ and the Durbin-Watson and related tests in the dynamic regression model. Maxwell L. King and Ping X. Wu **47** (1991) 145–152
Attribute groups * Cluster analysis for measuring welfare and quality of life across countries. Joseph G. Hirschberg, Esfandiar Maasoumi, and Daniel J. Slottje **50** (1991) 131–150
Attributes * Continuously distributed ___ and measures of multivariate inequality. Esfandiar Maasoumi **42** (1989) 131–144
Autocorrelated errors
Fighting the teflon factor: Comparing classical and Bayesian estimators for ___. Peter Kennedy and Daniel Simons **48** (1991) 15–27
On estimating and testing in a linear regression model with ___. Kazuhiro Ohtani **44** (1990) 333–346
Autocorrelation
A transformation that will circumvent the problem of ___ in an error-component model. Badi H. Baltagi and Qi Li **48** (1991) 385–393
An econometric analysis of nonsynchronous trading. Andrew W. Lo and A. Craig MacKinlay **45** (1990) 181–211
Testing for fourth-order ___ in regression disturbances when first-order ___is present. Maxwell L. King **41** (1989) 285–301
Autocorrelation coefficient * Optimal invariant tests for the ___ in linear regressions with stationary or nonstationary AR(1) errors. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
Autocorrelation tests * Finite sample power of linear regression ___. Walter Kramer and Helmut Zeisel **43** (1990) 363–372
Autoregression (see also Weighted autoregression)
Autoregressions * Estimating integrated higher-order continuous time ___ with an application to money-income causality. A.C. Harvey and James H. Stock **42** (1989) 319–336
Autoregressive leading indicator model * Forecasting turning points in international output growth rates using Bayesian exponentially weighted autoregression, time-varying parameter, and pooling techniques. Arnold Zellner, Chansik Hong, and Chung-ki Min **49** (1991) 175–304
Autoregressive model * The exact multi-period mean-square forecast error for the first-order ___ with an intercept. Jan R. Magnus and Bahram Pesaran **42** (1989) 157–179
Autoregressive moving average models
Testing for unit roots in ___: An instrumental variable approach. Sastry G. Pantula and Alastair Hall **48** (1991) 325–353
Unit-roots tests for time-series data with a linear time trend. Said E. Said **47** (1991) 285–303
Autoregressive parameters * Analysis of time series subject to changes in regime. James D. Hamilton **45** (1990) 39–70

Banking
Measuring cost efficiency in ___: Econometric and linear programming evidence. Gary D. Ferrier and C.A. Knox Lovell **46** (1990) 229–245
Polyhedral cone-ratio DEA models with an illustrative application to large commercial banks. A. Charnes, W.W. Cooper, Z.M. Huang, and D.B. Sun **46** (1990) 73–91

Bayes estimator * An adaptive empirical ___ of the multivariate normal means under quadratic loss. G.G. Judge, R. Carter Hill, and M.E. Bock **44** (1990) 189–213
Bayesian analysis
A ___ of simultaneous equation models by combining recursive analytical and numerical approaches. Mark F.J. Steel **48** (1991) 83–117
A ___ of the unit root in real exchange rates. Peter Schotman and Herman K. van Dijk **49** (1991) 195–238
Bayesian and classical hypothesis testing procedures * A posterior odds analysis of the weekend effect. Robert A. Connolly **49** (1991) 51–104
Bayesian and non-Bayesian estimators * On estimating and testing in a linear regression model with autocorrelated errors. Kazuhiro Ohtani **44** (1990) 333–346
Bayesian approach
A ___ to testing the arbitrage pricing theory. Robert McCulloch and Peter E. Rossi **49** (1991) 141–168
A ___ to regression selection and estimation, with application to a price index for radio services. Brent R. Moulton **49** (1991) 169–193
Bayesian distributions * Mean squared errors of forecast for selecting nonnested linear models and comparison with other critiria. Hiroki Tsurumi and Hajime Wago **48** (1991) 215–240
Bayesian empirical studies
A posterior odds analysis of the weekend effect. Robert A. Connolly **49** (1991) 51–104
Cointegration tests in present value relationships: A Bayesian look at the bivariate properties of stock prices and dividends. Gary Koop **49** (1991) 105–139
Bayesian empirical studies in economics and finance. Edited by Dale J. Poirier. Annals 1991-2 . . . . . **49** (1991) 1–304
Bayesian estimation * Seminonparametric ___ of the asymptotically ideal production model. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
Bayesian estimators * Fighting the teflon factor: Comparing classical and ___ for autocorrelated errors. Peter Kennedy and Daniel Simons **48** (1991) 15–27
Bayesian exponentially weighted autoregression * Forecasting turning points in international output growth rates using ___ , time-varying parameter, and pooling techniques. Arnold Zellner, Chansik Hong, and Chung-ki Min **49** (1991) 275–304
Bayesian inference * A note on ___ in a regression model with elliptical errors. Jacek Osiewalski **48** (1991) 183–193
Bayesian instrumental variables techniques * Bayesian multivariate exogeneity analysis: An application to a U.K. money demand equation. Mark F.J. Steel and Jean-Francois Richard **49** (1991) 239–274
Bayesian methods * Estimation of a regression model on two or more sets of differently grouped data. Mototsugu Fukushige and Michio Hatanaka **47** (1991) 207–226
Bayesian multivariate exogeneity analysis: An application to a UK money demand equation. Mark F.J. Steel and Jean-Francois Richard **49** (1991) 239–274
Bayesian priors * Analysis of time series subject to changes in regime. James D. Hamilton **45** (1990) 39–70
Bayesian regression * Effects of collinearity on information about regression coefficients. Ehsan S. Soofi **43** (1990) 255–274
Behavioral model * Inflation, relative price variation, and inequality. Daniel T. Slesnick **43** (1990) 135–151
Behavioral pricing models * The reserve-labor hypothesis, short-run pricing theories, and the employment-output relationship. Steven Garber **42** (1989) 219–245

Best linear unbiased estimator (BLUE) * The efficiency of rotating-panel designs in an analysis-of-variance model. Theo Nijman, Marno Verbeek, and Arthur van Soest **49** (1991) 373–399
Beta distribution * Testing Slutsky symmetry in systems of linear demand equations. J. Lew Silver and Mukhtar M. Ali **41** (1989) 251–266
Between-group income differentials * Statistical properties of ___. Joseph L. Gastwirth, Tapan K. Nayak, and Jane-Ling Wang **42** (1989) 5–19
Bias
Bounds for exact moments of estimators in the errors-in-variables model and simultaneous equations. Ralph Friedmann **45** (1990) 367–384
Induced work participation and the returns to experience for welfare women: Evidence from a social experiment. Dan Steinberg **41** (1989) 321–340
Two-stage instrumental variable estimators for the nonlinear errors-in-variables model. Yasuo Amemiya **44** (1990) 311–332
Bias correction * Mallows' C(p) criterion and unbiasedness of model selection. Masahito Kobaysahi and Shinichi Sakata **45** (1990) 385–395
Binary-probit model * The small-sample performance of the information-matrix test. Chris Orme **46** (1990) 309–331
Bivariate properties * Cointegration tests in present value relationships: A Bayesian look at the ___ of stock prices and dividends. Gary Koop **49** (1991) 105–139
Block-diagonal
Linear dynamic errors-in-variables models: Some structure theory. M. Deistler and B.D.O. Anderson **41** (1989) 39–63
Parametrization of factor analysis models. Giorgio Picci **41** (1989) 17–38
Bootstrapping improved estimators for linear regression models. David Brownstone **44** (1990) 171–187
Bootstrapping in multiplicative models. M.S. Srivastava and Balvir Singh **42** (1989) 287–297
Bounded-influence estimators for the SURE model. Franco Peracchi . . . **48** (1991) 119–134
Bounded-influence estimators for the Tobit model. Franco Peracchi **44** (1990) 107–126
Bounded likelihood function * A constrained maximum-likelihood approach to estimating switching regressions. Robert E. Phillips **48** (1991) 241–262
Bounds
Grouping ___ for inequality measures under alternative informational assumptions. Frank A. Cowell **48** (1991) 1–14
The role of multiplier ___ in efficiency analysis with application to Kansas farming. Russell G. Thompson, Larry N. Langemeier, Chih-Tah Lee, Euntaik Lee, and Robert M. Thrall **46** (1990) 93–108
Bounds for exact moments of estimators in the errors-in-variables model and simultaneous equations. Ralph Friedmann **45** (1990) 367–384
Bounds analysis * Reasonable extreme-___. Clive W.J. Granger and Harald F. Uhlig **44** (1990) 159–170
Bounds on relative efficiency * The efficiency of rotating-panel designs in an analysis-of-variance model. Theo Nijman, Marno Verbeek, and Arthur van Soest **49** (1991) 373–399
Bounds, table of * Small-disturbance asymptotics and the Durbin-Watson and related tests in the dynamic regression model. Maxwell L. King and Ping X. Wu **47** (1991) 145–152
Box-Cox transformed model * A note on the application of the nonlinear two-stage least-squares estimator to a ___. J. Daniel Khazzoom **42** (1989) 377–379
Box-Cox transformations * Transformations in stochastic DEA models. Jati K.Sengupta **46** (1990) 109–123

Canadian automobile data * A statistical perspective on insurance rate-making. Cheng Hsiao, Changseob Kim, and Grant Taylor **44** (1990) 5–24

Canadian export-supply and import-demand responsiveness * An adjustment-costs model of export supply and import demand. Denis Lawrence **46** (1990) 381–398
Canonical correlation
A method for approximate representation of vector-valued time series and its relation to two alternatives. Masanao Aoki and Arthur Havenner **42** (1989) 181–199
Transformations in stochastic DEA models. Jati K. Sengupta **46** (1990) 109–123
Capacity utilization * On the measurement of economic ___ for multiproduct industries. Kathleen Segerson and Dale Squires **44** (1990) 347–361
Capital asset pricing models * Are consumption-based intertemporal ___ structural? Eric Ghysels and Alastair Hall **45** (1990) 121–139
Capital utilization * A semiparametric structural analysis of the idling of cement kilns. Sanghamitra Das **50** (1991) 235–256
Cardinal utility * Ordinal and ___: An integration of the two dimensions of the welfare concept. Bernard M.S. van Praag **50** (1991) 69–89
Causality
A dispersion-dependency diagnostic test for aggregation error: With applications to monetary economics and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34
Estimating integrated higher-order continuous time autoregressions with an application to money-income ___. A.C. Harvey and James H. Stock **42** (1989) 319–336
The impact of stochastic and deterministic trends on money-output ___: A multi-country investigation. Robert Krol and Lee E. Ohanian **45** (1990) 291–308
CCR ratio model
Polyhedral cone-ratio DEA models with an illustrative application to large commercial banks. A. Charnes, W.W. Cooper, Z.M. Huang, and D.B. Sun **46** (1990) 73–91
Recent developments in DEA: The mathematical programming approach to frontier analysis. Lawrence M. Seiford and Robert M. Thrall **46** (1990) 7–38
Censored regression model
A statistical perspective on insurance rate-making. Cheng Hsiao, Changseob Kim, and Grant Taylor **44** (1990) 5–24
Bounded-influence estimators for the Tobit model. Franco Peracchi . **44** (1990) 107–126
Censoring * An econometric analysis of nonsynchronous trading. Andrew W. Lo and A. Craig MacKinlay **45** (1990) 181–211
Characteristic functions * Estimation of regression coefficients with the help of ___. Kees van Montfort, Ab Mooijaart, and Jan de Leeuw . . **41** (1989) 267–278
Chi-square statistic * Simulation estimation of time-series models. Bong-soo Lee and Beth Fisher Ingram **47** (1991) 197–205
Choice models
Empirical models of discrete games. Timothy F. Breshnahan and Peter C. Reiss **48** (1991) 57–81
On the compatibility of nested logit models with utility maximization. Axel Borsch-Supan **43** (1990) 373–388
Class intervals * Grouping bounds for inequality measures under alternative informational assumptions. Frank A. Cowell **48** (1991) 1–14
Classical and Bayesian estimators * Fighting the teflon factor: Comparing ___ for autocorrelated errors. Peter Kennedy and Daniel Simons **48** (1991) 15–27
Classical hypothesis testing procedures * A posterior odds analysis of the weekend effect. Robert A. Connolly **49** (1991) 51–104

Classical linear regression model * On the Wald tests for globally and locally quadratic restrictions. Gordon C.R. Kemp **50** (1991) 257–272
Classical principles of testing * The ___ using instrumental variables estimates. Michael A. Magdalinos **44** (1990) 241–279
Classical test statistics * Asymptotic relative efficiency of the ___ under misspecification. Pentti Saikkonen **42** (1989) 351–369
Classical tests * A unified approach to estimation and orthogonality tests in linear single-equation econometric models. M. Hashem Pesaran and Richard J. Smith **44** (1990) 41–66
Classical tests for contemporaneously uncorrelated disturbances in the linear simultaneous equations model. Darrell A. Turkington **42** (1989) 299–317
Closure property * Using incomplete moments to measure inequality. Richard J. Butler and James B. McDonald **42** (1989) 109–119
Cluster analysis for measuring welfare and quality of life across countries. Joseph G. Hirschberg, Esfandiar Maasoumi, and Daniel J. Slottje **50** (1991) 131–150
Cobb-Douglas deterministic frontier production function * Deterministic parametric and nonparametric estimation of efficiency in service production: A comparison. Hans Bjurek, Lennart Hjalmarsson, and Finn R. Forsund **46** (1990) 213–227
Cobb-Douglas multiplicative model * Bootstrapping in multiplicative models. M.S. Srivastava and Balvir Singh **42** (1989) 287–297
Coefficient regression models * A note concerning specifications of interactive random-___. Joseph P. Gatto, Harry H. Kelejian, and Scott W. Stephan **47** (1991) 273–284
Coherency of the indirect translog demand system with binding nonnegativity constraints. Arthur van Soest and Peter Kooreman **44** (1990) 391–400
Cointegration * Seasonal integration and ___. S. Hylleberg, R.F. Engle, C.W.J. Granger, and B.S. Yoo **44** (1990) 215–238
Cointegration tests in present value relationships: A Bayesian look at the bivariate properties of stock prices and dividends. Gary Koop **49** (1991) 105–139
Collinearity * Effects of ___ on information about regression coefficients. Ehsan S. Soofi **43** (1990) 255–274
COMFAC restrictions * On the Wald tests for globally and locally quadratic restrictions. Gordon C.R. Kemp **50** (1991) 257–272
Commercial banks * Polyhedral cone-ratio DEA models with an illustrative application to large ___. A. Charnes, W.W. Cooper, Z.M. Huang, and D.B. Sun **46** (1990) 73–91
Competing-risk model * A random-effects logit model of work-welfare transitions. John Enberg, Peter Gottschalk, and Douglas Wolf **43** (1990) 63–75
Complementary factors * Seminonparametric Bayesian estimation of the asymptotically ideal production model. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
Composed error disturbance terms * Recent developments in the econometric estimation of frontiers. Paul W. Bauer **46** (1990) 39–56
Composed error model * Moment-based estimation and testing of stochastic frontier models. Raymond J. Kopp and John Mullahy ... **46** (1990) 165–183
Composite indexes * A multinomial probability model of size income distribution. Charles A. Diamond, Curtis J. Simon, and John T. Warner **43** (1990) 43–61
Composite output transformation * Transformations in stochastic DEA models. Jati K. Sengupta **46** (1990) 109–123
Conditional covariance matrix * Asset pricing with a FACTOR-ARCH covariance structure: Empirical estimates for Treasury bills. Robert F. Engle, Victor K. Ng, and Michael Rothschild **45** (1990) 213–237
Conditional demand analysis * A random coefficient approach to the estimation of residential end-use load profiles. Denzil G. Fiebig, Robert Bartels, and Dennis J. Aigner **50** (1991) 297–327

Conditional distribution
Analysis of time series subject to changes in regime. James D. Hamilton **45** (1990) 39–70
ARCH models as diffusion approximations. Daniel B. Nelson **45** (1990) 7–38
Intertemporal asset pricing: An empirical investigation. Jay Shanken **45** (1990) 99–120
Conditional heteroskedasticity * Testing for strong serial correlation and dynamic ___ in multiple regression. P.M. Robinson **47** (1991) 67–84
Conditional mean tests * An encompassing approach to ___ with applications to testing nonnested hypotheses. Jeffrey M. Wooldridge **45** (1990) 331–350
Conditional means * On the application of robust, regression-based diagnostics to models of ___ and conditional variances. Jeffrey M. Wooldridge **47** (1991) 5–46
Conditional moment tests * Specification testing and quasi-maximum-likelihood estimation. Jeffrey M. Wooldridge **48** (1991) 29–55
Conditional moments * Using ___ of asset payoffs to infer the volatility of intertemporal marginal rates of substitution. A. Ronald Gallant, Lars Peter Hansen, and George Tauchen **45** (1990) 141–179
Conditional scaling * On the relation between GARCH and stable processes. Casper G. de Vries **48** (1991) 313–324
Conditional stock volatility * Alternative models for ___. Adrian R. Pagan and G. William Schwert **45** (1990) 267–290
Conditional variances * On the application of robust, regression-based diagnostics to models of conditional means and ___. Jeffrey M. Wooldridge **47** (1991) 5–46
Cone-ratio DEA models * Polyhedral ___ with an illustrative application to large commercial banks. A. Charnes, W.W. Cooper, Z.M. Huang, and D.B. Sun **46** (1990) 73–91
Confidence interval
Asymptotic normality and consistency of semi-nonparametric regression estimators using an upwards F test truncation rule. Brian J. Eastwood **48** (1991) 151–181
Bootstrapping in multiplicative models. M.S. Srivastava and Balvir Singh **42** (1989) 287–297
Confluent hypergeometric functions * Bounds for exact moments of estimators in the errors-in-variables model and simultaneous equations. Ralph Friedmann **45** (1990) 367–384
Conjugate prior distribution, recursive extended natural * Bayesian multivariate exogeneity analysis: An application to a U.K. money demand equation. Mark F.J. Steel and Jean-Francois Richard **49** (1991) 239–274
Conjugate prior specification * A Bayesian approach to testing the arbitrage pricing theory. Robert McCulloch and Peter E. Rossi **49** (1991) 141–168
Consistency
Asymptotic normality and ___ of semi-nonparametric regression estimators using an upwards F test truncation rule. Brian J. Eastwood **48** (1991) 151–181
Mode regression. Myoung-jai Lee **42** (1989) 337–349
Robust estimation based on grouped-adjusted data in censored regression models. Kazumitsu Nawata **43** (1990) 337–362
Robust estimation based on grouped-adjusted data in linear regression models. Kazumitsu Nawata **43** (1990) 317–336
Consistent estimation for some nonlinear errors-in-variables models. Cheng Hsiao **41** (1989) 159–185
Constrained maximum-likelihood approach * A ___ to estimating switching regressions. Robert E. Phillips **48** (1991) 241–262
Constraints * Coherency of the indirect translog demand system with binding nonnegativity ___. Arthur van Soest and Peter Kooreman . . **44** (1990) 391–400

Constraints, inequality * Testing inequality constraints in linear econometric models. Frank A. Wolak **41** (1989) 205–235
Consumer behavior
On the compatibility of nested logit models with utility maximization. Axel Borsch-Supan **43** (1990) 373–388
Ordinal and cardinal utility: An integration of the two dimensions of the welfare concept. Bernard M.S. van Praag **50** (1991) 69–89
Consumer choice * Goodness-of-fit in optimizing models. Hal R. Varian **46** (1990) 125–140
Consumer demand equations * Forecasting with demand systems: A comparative study. Marcus J. Chambers **44** (1990) 363–376
Consumer demand system modeling * A dispersion-dependency diagnostic test for aggregation error: With applications to monetary economics and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34
Consumer demand systems * Aggregation and identification in ___. J.M. Heineke and H.M. Shefrin **44** (1990) 377–390
Consumption analysis * Goodness-of-fit in optimizing models. Hal R. Varian **46** (1990) 125–140
Consumption-based intertemporal capital asset pricing models * Are ___ structural? Eric Ghysels and Alastair Hall **45** (1990) 121–139
Contemporaneously uncorrelated disturbances * Classical tests for ___ in the linear simultaneous equations model. Darrell A. Turkington . . . **42** (1989) 299–317
Contingency table * Estimation of a regression model on two or more sets of differently grouped data. Mototsugu Fukushige and Michio Hatanaka **47** (1991) 207–226
Continuous time autoregressions * Estimating integrated higher-order ___ with an application to money-income causality. A.C. Harvey and James H. Stock **42** (1989) 319–336
Continuous time models * Estimating integrated higher-order continuous time autoregressions with an application to money-income causality. A.C. Harvey and James H. Stock **42** (1989) 319–336
Continuous time process * ARCH models as diffusion approximations. Daniel B. Nelson **45** (1990) 7–38
Continuously distributed attributes and measures of multivariate inequality. Esfandiar Maasoumi **42** (1989) 131–144
Convexity requirements * Recent developments in DEA: The mathematical programming approach to frontier analysis. Lawrence M. Seiford and Robert M. Thrall **46** (1990) 7–38
Correlation
Least absolute error estimation in the presence of serial ___. Andrew A. Weiss **44** (1990) 127–158
Testing for strong serial ___ and dynamic conditional heteroskedasticity in multiple regression. P.M. Robinson **47** (1991) 67–84
Correlation model * Estimation of a regression model on two or more sets of differently grouped data. Mototsugu Fukushige and Michio Hatanaka **47** (1991) 207–226
Cost efficiency * Measuring ___ in banking: Econometric and linear programming evidence. Gary D. Ferrier and C.A. Knox Lovell **46** (1990) 229–245
Cost functions
Seminonparametric Bayesian estimation of the asymptotically ideal production model. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
The measurement of productivity and scarcity rents: The case of asbestos in Canada. Pierre Lasserre and Pierre Ouellette **48** (1991) 287–312
Cost-minimization hypothesis * Production frontiers, panel data, and time-varying technical inefficiency. Subal C. Kumbhakar **46** (1990) 201–211

Cost-of-living indices
A numerical methods approach to calculating ___. Susan Porter-Hudak and Kathy Hayes **50** (1991) 91–105
Normative index numbers. Daniel T. Slesnick **50** (1991) 107–130
Cost system approaches * Recent developments in the econometric estimation of frontiers. Paul W. Bauer **46** (1990) 39–56
Costs model * An adjustment-___ of export supply and import demand. Denis Lawrence **46** (1990) 381–398
Covariance matrix
A note on the asymptotic distribution of impulse response functions of estimated VAR models with orthogonal residuals. Helmut Lutkepohl **42** (1989) 371–376
Asset pricing with a FACTOR-ARCH covariance structure: Empirical estimates for Treasury bills. Robert F. Engle, Victor K. Ng, and Michael Rothschild **45** (1990) 213–237
Least absolute error estimation in the presence of serial correlation. Andrew A. Weiss **44** (1990) 127–158
Covariance restrictions
An efficient GLS estimator of triangular models with ___. Manuel Arellano **42** (1989) 267–273
On the efficient estimation of simultaneous equations with ___. Manuel Arellano **42** (1989) 247–265
Simultaneous equations with ___. Thomas J. Rothenberg and Paul A. Ruud **44** (1990) 25–39
Covariance structure(s)
Asset pricing with a FACTOR-ARCH ___: Empirical estimates for Treasury bills. Robert F. Engle, Victor K. Ng, and Michael Rothschild **45** (1990) 213–237
Linear latent variable models and ___. T.W. Anderson **41** (1989) 91–119
Covariates * Nonparametric hazard estimation with time-varying discrete ___. Siu Fai Leung and Wing Hung Wong **45** (1990) 309–330
Cramer-Rao lower bound * Classical tests for contemporaneously uncorrelated disturbances in the linear simultaneous equations model. Darrell A. Turkington **42** (1989) 299–317
Critical regions * On multiple diagnostic procedures for the linear model. Grant H. Hillier **47** (1991) 47–66
Cross-entropy analysis * Effects of collinearity on information about regression coefficients. Ehsan S. Soofi **43** (1990) 255–274
Cross-price elasticities * Price elasticities from survey data: Extensions and Indonesian results. Angus Deaton **44** (1990) 281–309
Cross-section models * On the application of robust, regression-based diagnostics to models of conditional means and conditional variances. Jeffrey M. Wooldridge **47** (1991) 5–46
Cross-section models (see also Time-series models)
Cross-sectional and time-series variation * Production frontiers with ___ in efficiency levels. Christopher Cornwell, Peter Schmidt, and Robin C. Sickles **46** (1990) 185–200
Cross-sections * Estimation of time-dependent parameters in linear models using ___, panels, or both. Theo Nijman and Marno Verbeek **46** (1990) 333–346
Cross-validation * Asymptotic optimality of generalized C(L), ___ , and generalized ___ in regression with heteroskedastic errors. Donald W.K. Andrews **47** (1991) 359–377
Currency options * Pricing foreign ___ with stochastic volatility. Angelo Melino and Stuart M. Turnbull **45** (1990) 239–265
Cyclical components of technical change * Modeling stochastic and ___: An application of the Kalman filter. Margaret E. Slade **41** (1989) 363–383

Data-based methods * Seminonparametric Bayesian estimation of the asymptotically ideal production model. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
Data contamination * Detecting multiple outliers with an application to R & D productivity. Peter C. Reiss **43** (1990) 293–315
Data-driven procedures * Asymptotic optimality of generalized C(L), cross-validation, and generalized cross-validation in regression with heteroskedastic errors. Donald W.K. Andrews **47** (1991) 359–377
Data envelopment analysis
Deterministic parametric and nonparametric estimation of efficiency in service production: A comparison. Hans Bjurek, Lennart Hjalmarsson, and Finn R. Forsund **46** (1990) 213–227
Polyhedral cone-ratio ___ models with an illustrative application to large commercial banks. A. Charnes, W.W. Cooper, Z.M. Huang, and D.B. Sun **46** (1990) 73–91
Largest size-efficient scale and size efficiencies of decision-making units in ___. Ajay Maindiratta **46** (1990) 57–72
Recent developments in ___: The mathematical programming approach to frontier analysis. Lawrence M. Seiford and Robert M. Thrall **46** (1990) 7–38
Recent developments in the econometric estimation of frontiers. Paul W. Bauer **46** (1990) 39–56
The role of multiplier bounds in efficiency analysis with application to Kansas farming. Russell G. Thompson, Larry N. Langemeier, Chih-Tah Lee, Euntaik Lee, and Robert M. Thrall **46** (1990) 93–108
Data envelopment analysis (see also DEA)
Data-generation process
How to live with misspecification if you must. Esfandiar Maasoumi **44** (1990) 67–86
Testing nonnested Euler conditions with quadrature-based methods of approximation. Eric Ghysels and Alastair Hall **46** (1990) 273–308
Data transformation * Personal characteristics, unemployment insurance, and the duration of unemployment. Dean A. Follmann, Matthew S. Goldberg, and Laurie May **45** (1990) 351–366
DEA * Recent developments in ___: The mathematical programming approach to frontier analysis. Lawrence M. Seiford and Robert M. Thrall **46** (1990) 7–38
DEA models
Polyhedral cone-ratio ___ with an illustrative application to large commercial banks. A. Charnes, W.W. Cooper, Z.M. Huang, and D.B. Sun **46** (1990) 73–91
Transformations in stochastic ___. Jati K. Sengupta **46** (1990) 109–123
Decision-making units * Largest size-efficient scale and size efficiencies of ___ in data envelopment analysis. Ajay Maindiratta **46** (1990) 57–72
Decision rule * A semiparametric structural analysis of the idling of cement kilns. Sanghamitra Das **50** (1991) 235–256
Decomposable inequality measures
Sampling variance and ___. Frank A. Cowell **42** (1989) 27–41
The development of international inequality: 1960-1985. Henri Theil **42** (1989) 145–155
Demand analysis
A random coefficient approach to the estimation of residential end-use load profiles. Denzil G. Fiebig, Robert Bartels, and Dennis J. Aigner **50** (1991) 297–327
A numerical methods approach to calculating cost-of-living indices. Susan Porter-Hudak and Kathy Hayes **50** (1991) 91–105
Testing inequality constraints in linear econometric models. Frank A. Wolak **41** (1989) 205–235
The information content of equivalence scales. Richard Blundell and Arthur Lewbel **50** (1991) 49–68

Demand behavior * Welfare comparisons and situation comparisons. Robert A. Pollak **50** (1991) 31–48
Demand conditions, regulation, and the measurement of productivity. Elie Appelbaum and Joseph Berechman **47** (1991) 379–400
Demand equation(s)
Bayesian multivariate exogeneity analysis: An application to a UK money ___. Mark F.J. Steel and Jean-Francois Richard **49** (1991) 239–274
Price elasticities from survey data: Extensions and Indonesian results. Angus Deaton **44** (1990) 281–309
Testing Slutsky symmetry in systems of linear ___. J. Lew Silver and Mukhtar M. Ali **41** (1989) 251–266
Demand estimation * Goodness-of-fit in optimizing models. Hal R. Varian **46** (1990) 125–140
Demand models * A note on the estimation of nonsymmetric dynamic factor ___. Dilip B. Madan and Ingmar R. Prucha **42** (1989) 275–283
Demand-supply example * The simultaneous-equations model revisited: Statistical adequacy and identification. Aris Spanos **44** (1990) 87–105
Demand system(s)
Aggregation and identification in consumer ___. J.M. Heineke and H.M. Shefrin **44** (1990) 377–390
Coherency of the indirect translog ___ with binding nonnegativity constraints. Arthur van Soest and Peter Kooreman **44** (1990) 391–400
Estimation and testing when explanatory variables are endogenous: An application to a ___. C.L.F. Attfield **48** (1991) 395–408
Forecasting with ___: A comparative study. Marcus J. Chambers . . . **44** (1990) 363–376
Ordinal and cardinal utility: An integration of the two dimensions of the welfare concept. Bernard M.S. van Praag **50** (1991) 69–89
Dependency diagnostic test * A dispersion-___ for aggregation error: With applications to monetary economics and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34
Design matrices * Finite sample power of linear regression autocorrelation tests. Walter Kramer and Helmut Zeisel **43** (1990) 363–372
Deterministic parametric and nonparametric estimation of efficiency in service production: A comparison. Hans Bjurek, Lennart Hjalmarsson, and Finn R. Forsund **46** (1990) 213–227
Deterministic trends * The impact of stochastic and ___ on money-output causality: A multi-country investigation. Robert Krol and Lee E. Ohanian **45** (1990) 291–308
Diagonal or block-diagonal * Linear dynamic errors-in-variables models: Some structure theory. M. Deistler and B.D.O. Anderson **41** (1989) 39–63
Diagnostic procedures * On multiple ___ for the linear model. Grant H. Hillier **47** (1991) 47–66
Diagnostic screening * A Bayesian analysis of the unit root in real exchange rates. Peter Schotman and Herman K. van Dijk **49** (1991) 195–238
Diagnostic test * A dispersion-dependency ___ for aggregation error: With applications to monetary economics and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34
Diagnostic testing
Are consumption-based intertemporal capital asset pricing models structural? Eric Ghysels and Alastair Hall **45** (1990) 121–139
Bayesian multivariate exogeneity analysis: An application to a U.K. money demand equation. Mark F.J. Steel and Jean-Francois Richard **49** (1991) 239–274
Distributional specification tests against semi-parametric alternatives. Simon Peters and Richard J. Smith **47** (1991) 175–194
Editors' introduction. ___. Grant H. Hillier and Maxwell L. King. Annals 1991-1 . . . . . **47** (1991) 1–4

On multiple diagnostic procedures for the linear model. Grant H. Hillier **47** (1991) 47–66
On the application of robust, regression-based diagnostics to models of conditional means and conditional variances. Jeffrey M. Wooldridge **47** (1991) 5–46
Optimal invariant tests for the autocorrelation coefficient in linear regressions with stationary or nonstationary AR(1) errors. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
Testing for strong serial correlation and dynamic conditional heteroskedasticity in multiple regression. P.M. Robinson **47** (1991) 67–84
Small-disturbance asymptotics and the Durbin-Watson and related tests in the dynamic regression model. Maxwell L. King and Ping X. Wu **47** (1991) 145–152
The Durbin-Watson ratio under infinite-variance errors. Peter C.B. Phillips and Mico Loretan **47** (1991) 85–114
The finite-sample distributions of heteroskedasticity robust Wald statistics. Andrew Chesher and Gerard Austin **47** (1991) 153–173
Diagnostic testing. Edited by Grant H. Hillier and Maxwell L. King. Annals 1991-1 . . . . . **47** (1991) 1–194
Diagnostics • On the application of robust, regression-based ___ to models of conditional means and conditional variances. Jeffrey M. Wooldridge **47** (1991) 5–46
Diffusion approximations • ARCH models as ___. Daniel B. Nelson . . . **45** (1990) 7–38
Diffusion model • Pricing foreign currency options with stochastic volatility. Angelo Melino and Stuart M. Turnbull **45** (1990) 239–265
Discrete choice models • On the compatibility of nested logit models with utility maximization. Axel Borsch-Supan **43** (1990) 373–388
Discrete covariates • Nonparametric hazard estimation with time-varying ___. Siu Fai Leung and Wing Hung Wong **45** (1990) 309–330
Discrete-decision problem • A semiparametric structural analysis of the idling of cement kilns. Sanghamitra Das **50** (1991) 235–256
Discrete games • Empirical models of ___. Timothy F. Breshnahan and Peter C. Reiss **48** (1991) 57–81
Discrete parameter • Asymptotic optimality of generalized C(L), cross-validation, and generalized cross-validation in regression with heteroskedastic errors. Donald W.K. Andrews **47** (1991) 359–377
Discrete qualities of time series • Analysis of time series subject to changes in regime. James D. Hamilton **45** (1990) 39–70
Discrete time approximation • Pricing foreign currency options with stochastic volatility. Angelo Melino and Stuart M. Turnbull **45** (1990) 239–265
Discrete-time competing-risk model • A random-effects logit model of work-welfare transitions. John Enberg, Peter Gottschalk, and Douglas Wolf **43** (1990) 63–75
Discrete time processes • ARCH models as diffusion approximations. Daniel B. Nelson **45** (1990) 7–38
Disequilibrium models • Estimating ___ with limited a priori price-adjustment information. Walter J. Mayer **41** (1989) 303–320
Dispersion-dependency diagnostic test • A ___ for aggregation error: With applications to monetary economics and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34
Distance estimators • Consistent estimation for some nonlinear errors-in-variables models. Cheng Hsiao **41** (1989) 159–185
Distributed attributes • Continuously ___ and measures of multivariate inequality. Esfandiar Maasoumi **42** (1989) 131–144
Distribution (see Income distribution)
Distribution dominance criteria • Family size and social utility: Income ___. Francois Bourguignon **42** (1989) 67–80

Distribution-free approach * Elliptical multivariate analysis. Bernard M.S. van Praag and Bertram M. Wesselman **41** (1989) 189–203
Distribution functions
Regression models for positive random variables. James B. McDonald and Richard J. Butler **43** (1990) 227–251
Using incomplete moments to measure inequality. Richard J. Butler and James B. McDonald **42** (1989) 109–119
Distribution of earnings * Remembrance of things past the ___ across occupations and the kappa criterion. Joseph G. Hirschberg and D.J. Slottje **42** (1989) 121–130
Distribution of impulse response functions * A note on the asymptotic ___ of estimated VAR models with orthogonal residuals. Helmut Lutkepohl **42** (1989) 371–376
Distribution of income * Is size ___ a random walk? Kathy Hayes, Susan Porter-Hudak, Gerald Scully, and D.J. Slottje **43** (1990) 213–226
Distribution movements * Income ___ and aggregate money illusion. Arthur Lewbel **43** (1990) 35–42
Distributional assumptions * Moment-based estimation and testing of stochastic frontier models. Raymond J. Kopp and John Mullahy . . . **46** (1990) 165–183
Distributional specification tests against semi-parametric alternatives. Simon Peters and Richard J. Smith **47** (1991) 175–194
Distributions * The finite-sample ___ of heteroskedasticity robust Wald statistics. Andrew Chesher and Gerard Austin **47** (1991) 153–173
Disturbance asymptotics * Small-___ and the Durbin-Watson and related tests in the dynamic regression model. Maxwell L. King and Ping X. Wu **47** (1991) 145–152
Disturbance term assumptions * Recent developments in the econometric estimation of frontiers. Paul W. Bauer **46** (1990) 39–56
Disturbances
Classical tests for contemporaneously uncorrelated ___ in the linear simultaneous equations model. Darrell A. Turkington **42** (1989) 299–317
Pre-testing for linear restrictions in a regression model with spherically symmetric ___. Judith A. Giles **50** (1991) 377–398
Disutility functions * On the relationship between income inequality measures and social welfare functions. Camilo Dagum **43** (1990) 91–102
Divisia index * Normative index numbers. Daniel T. Slesnick **50** (1991) 107–130
Divisia index number theory * A dispersion-dependency diagnostic test for aggregation error: With applications to monetary economics and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34
Dominance criteria(on)
Family size and social utility: Income distribution ___. Francois Bourguignon **42** (1989) 67–80
The likelihood ___: A new approach to model selection. Robert A. Pollak and Terence J. Wales **47** (1991) 227–242
Dominance ordering * The likelihood dominance criterion: A new approach to model selection. Robert A. Pollak and Terence J. Wales **47** (1991) 227–242
Duality relation * Testing inequality constraints in linear econometric models. Frank A. Wolak **41** (1989) 205–235
Duration models
A random-effects logit model of work-welfare transitions. John Enberg, Peter Gottschalk, and Douglas Wolf **43** (1990) 63–75
Regression models for positive random variables. James B. McDonald and Richard J. Butler **43** (1990) 227–251
Durbin-Watson * Small-disturbance asymptotics and the ___ and related tests in the dynamic regression model. Maxwell L. King and Ping X. Wu **47** (1991) 145–152

Durbin-Watson ratio * The ___ under infinite-variance errors. Peter C.B. Phillips and Mico Loretan **47** (1991) 85–114
Dutch consumer expenditures * Estimation of time-dependent parameters in linear models using cross-sections, panels, or both. Theo Nijman and Marno Verbeek **46** (1990) 333–346
Dynamic conditional heteroskedasticity * Testing for strong serial correlation and ___ in multiple regression. P.M. Robinson **47** (1991) 67–84
Dynamic errors-in-variables models
Identification and estimation of ___. Anthony M. Bloch **41** (1989) 145–158
Linear ___: Some structure theory. M. Deistler and B.D.O. Anderson **41** (1989) 39–63
Optimal invariant tests for the autocorrelation coefficient in linear regressions with stationary or nonstationary AR(1) errors. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
Dynamic factor demand models * A note on the estimation of nonsymmetric ___. Dilip B. Madan and Ingmar R. Prucha **42** (1989) 275–283
Dynamic linear rational expectations models * Recursive solution methods for ___. Mark W. Watson **41** (1989) 65–89
Dynamic models * Multi-step estimation and forecasting in ___. Andrew A. Weiss **48** (1991) 135–149
Dynamic regression model * Small-disturbance asymptotics and the Durbin-Watson and related tests in the ___. Maxwell L. King and Ping X. Wu **47** (1991) 145–152
Dynamic shock-error model * Maximum likelihood estimation of the ___. Damayanti Ghosh **41** (1989) 121–143

Earnings across occupations * Remembrance of things past the distribution of ___ and the kappa criterion. Joseph G. Hirschberg and D.J. Slottje **42** (1989) 121–130
Econometric analysis * An ___ of nonsynchronous trading. Andrew W. Lo and A. Craig MacKinlay **45** (1990) 181–211
Econometric and linear programming evidence * Measuring cost efficiency in banking: ___. Gary D. Ferrier and C.A. Knox Lovell **46** (1990) 229–245
Econometric estimation * Recent developments in the ___ of frontiers. Paul W.B Bauer **46** (1990) 39–56
Econometric issues in analyzing inequality
A dispersion-dependency diagnostic test for aggregation error: With applications to monetary economics and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34
A general functional form for approximating the Lorenz curve. R.L. Basmann, K.J. Hayes, J.D. Johnson, and D.J. Slottje **43** (1990) 77–90
A multinomial probability model of size income distribution. Charles A. Diamond, Curtis J. Simon, and John T. Warner **43** (1990) 43–61
A random-effects logit model of work-welfare transactions. John Enberg, Peter Gottschalk, and Douglas Wolf **43** (1990) 63–75
An intervention analysis of the War on Poverty: Poverty's persistence and political-business cycle implications. Thomas B. Fomby and Kathy J. Hayes **43** (1990) 197–212
Continuously distributed attributes and measures of multivariate inequality. Esfandiar Maasoumi **42** (1989) 131–144
Editor's introduction. ___—Part I: Estimation. Daniel Slottje. Annals 1989-3 . . . . . **42** (1989) 1–3
Editor's introduction. ___—Part II: Modeling methods. Daniel Slottje. Annals 1990-1 . . . . . **43** (1990) 1–3
Family size and social utility: Income distribution dominance criteria. Francois Bourguignon **42** (1989) 67–80

Generalized entropy measures of mobility for different sexes and income levels. Esfandiar Maasoumi and Sourushe Zandvakili . . . **43** (1990) 121–133
Improving the accuracy of estimates of Gini coefficients. Robert I. Lerman and Shlomo Yitzhaki **42** (1989) 43–47
Income distribution movements and aggregate money illusion. Arthur Lewbel **43** (1990) 35–42
Income inequality measures based on sample surveys. Fredrik Nygard and Arne Sandstrom **42** (1989) 81–95
Inequality and the standard of living. Dale W. Jorgensen and Daniel T. Slesnick **43** (1990) 103–120
Inflation, relative price variation, and inequality. Daniel T. Slesnick . **43** (1990) 135–151
Interpreting the magnitude of changes in measures of income inequality. McKinley L. Blackburn **42** (1989) 21–25
Is size distribution of income a random walk? Kathy Hayes, Susan Porter-Hudak, Gerald Scully, and D.J. Slottje **43** (1990) 213–226
Measuring wealth in a simple two-period model. John Creedy **43** (1990) 167–177
Methodological issues in the estimation of the size distribution of household wealth. Edward N. Wolff **43** (1990) 179–195
On the empirical relationship between several well-known inequality measures. D.J. Slottje, R.L. Basmann, and M. Nieswiadomy **42** (1989) 49–66
On the relationship between income inequality measures and social welfare functions. Camilo Dagum **43** (1990) 91–102
Optimal grouping of income and wealth data. J.B. Davies and A.F. Shorrocks **42** (1989) 97–108
Regression models for positive random variables. James B. McDonald and Richard J. Butler **43** (1990) 227–251
Remembrance of things past the distribution of earnings across occupations and the kappa criterion. Joseph G. Hirschberg and D.J. Slottje **42** (1989) 121–130
Sampling variance and decomposable inequality measures. Frank A. Cowell **42** (1989) 27–41
Statistical properties of between-group income differentials. Joseph L. Gastwirth, Tapan K. Nayak, and Jane-Ling Wang **42** (1989) 5–19
The development of international inequality: 1960–1985. Henri Theil **42** (1989) 145–155
The poverty concept when prices are income-dependent. Bernard M.S. van Praag and Michael R. Baye **43** (1990) 153–166
Using incomplete moments to measure inequality. Richard J. Butler and James B. McDonald **42** (1989) 109–119

Econometric issues in analyzing inequality —Part I: Estimation. Edited by Daniel Slottje. Annals 1989-3 . . . . . **42** (1989) 1–155

Econometric issues in analyzing inequality —Part II: Modeling methods. Edited by Daniel Slottje. Annals 1990-1 . . . . . **43** (1990) 1–251

Econometric methodology

A statistical perspective on insurance rate-making. Cheng Hsiao, Changseob Kim, and Grant Taylor **44** (1990) 5–24
A unified approach to estimation and orthogonality tests in linear single-equation econometric models. M. Hashem Pesaran and Richard J. Smith **44** (1990) 41–66
An adaptive empirical Bayes estimator of the multivariate normal means under quadratic loss. G.G. Judge, R. Carter Hill, and M.E. Bock **44** (1990) 189–213
Bootstrapping improved estimators for linear regression models. David Brownstone **44** (1990) 171–187
Bounded-influence estimators for the Tobit model. Franco Peracchi **44** (1990) 107–126

Contributions to ___ in honor of T.W. Anderson. Edited by Dennis J. Aigner. Annals 1990-2 . . . . . **44** (1990) 1–238
Editor's introduction. Contributions to ___ in honor of T.W. Anderson. Dennis J. Aigner. Annals 1990-2 . . . . . **44** (1990) 1–4
How to live with misspecification if you must. Esfandiar Maasoumi **44** (1990) 67–86
Least absolute error estimation in the presence of serial correlation. Andrew A. Weiss **44** (1990) 127–158
Reasonable extreme-bounds analysis. Clive W.J. Granger and Harald F. Uhlig **44** (1990) 159–170
Seasonal integration and cointegration. S. Hylleberg, R.F. Engle, C.W.J. Granger, and B.S. Yoo **44** (1990) 215–238
Simultaneous equations with covariance restrictions. Thomas J. Rothenberg and Paul A. Ruud **44** (1990) 25–39
The simultaneous-equations model revisited: Statistical adequacy and identification. Aris Spanos **44** (1990) 87–105
Econometric methods
Alternative models for conditional stock volatility. Adrian R. Pagan and G. William Schwert **45** (1990) 267–290
An econometric analysis of nonsynchronous trading. Andrew W. Lo and A. Craig MacKinlay **45** (1990) 181–211
Analysis of time series subject to changes in regime. James D. Hamilton **45** (1990) 39–70
ARCH models as diffusion approximations. Daniel B. Nelson **45** (1990) 7–38
Are consumption-based intertemporal capital asset pricing models structural? Eric Ghysels and Alastair Hall **45** (1990) 121–139
Asset pricing with a FACTOR-ARCH covariance structure: Empirical estimates for Treasury bills. Robert F. Engle, Victor K. Ng, and Michael Rothschild **45** (1990) 213–237
Editors' introduction. ___ and financial time series. John Y. Campbell and Angelo Melino. Annals 1990-3 . . . . . **45** (1990) 1–5
Intertemporal asset pricing: An empirical investigation. Jay Shanken **45** (1990) 99–120
Pricing foreign currency options with stochastic volatility. Angelo Melino and Stuart M. Turnbull **45** (1990) 239–265
Residual risk revisited. Bruce N. Lehmann **45** (1990) 71–97
Using conditional moments of asset payoffs to infer the volatility of intertemporal marginal rates of substitution. A. Ronald Gallant, Lars Peter Hansen, and George Tauchen **45** (1990) 141–179
Econometric methods and financial time series. Edited by John Y. Campbell and Angelo Melino. Annals 1990-3 . . . . . **45** (1990) 1–290
Econometric models
A unified approach to estimation and orthogonality tests in linear single-equation ___. M. Hashem Pesaran and Richard J. Smith **44** (1990) 41–66
Forecasting with demand systems: A comparative study. Marcus J. Chambers **44** (1990) 363–376
Risk and reactor safety systems adoption. Jeffrey A. Dubin and Geoffrey S. Rothwell **42** (1989) 201–218
Testing inequality constraints in linear ___. Frank A. Wolak **41** (1989) 205–235
Econometric systems * How to live with misspecification if you must. Esfandiar Maasoumi **44** (1990) 67–86
Economic capacity utilization * On the measurement of ___ for multiproduct industries. Kathleen Segerson and Dale Squires **44** (1990) 347–361
Economic development * The development of international inequality: 1960–1985. Henri Theil **42** (1989) 145–155
Economic growth * Inequality and the standard of living. Dale W. Jorgenson and Daniel T. Slesnick **43** (1990) 103–120

Economic Opportunity Act of 1964 * An intervention analysis of the War on Poverty: Poverty's persistence and political-business cycle implications. Thomas B. Fomby and Kathy J. Hayes **43** (1990) 197–212
Economic time-series * An analogue model of phase-averaging procedures. Julia Campos, Neil R. Ericsson, and David F. Hendry **43** (1990) 275–292
Economics, monetary * A dispersion-dependency diagnostic test for aggregation error: With applications to monetary economics and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34
Efficient market model * Cointegration tests in present value relationships: A Bayesian look at the bivariate properties of stock prices and dividends. Gary Koop **49** (1991) 105–139
Efficient Wald estimator * Grouped-data estimation and testing in simple labor-supply models. Joshua D. Angrist **47** (1991) 243–266
Efficiency
Asymptotic relative ___ of the classical test statistics under misspecification. Pentti Saikkonen **42** (1989) 351–369
Deterministic parametric and nonparametric estimation of ___ in service production: A comparison. Hans Bjurek, Lennart Hjalmarsson, and Finn R. Forsund **46** (1990) 213–227
Measuring cost ___ in banking: Econometric and linear programming evidence. Gary D. Ferrier and C.A. Knox Lovell **46** (1990) 229–245
The ___ of rotating-panel designs in an analysis-of-variance model. Theo Nijman, Marno Verbeek, and Arthur van Soest **49** (1991) 373–399
Efficiency analysis * The role of multiplier bounds in ___ with application to Kansas farming. Russell G. Thompson, Larry N. Langemeier, Chih-Tah Lee, Euntaik Lee, and Robert M. Thrall **46** (1990) 93–108
Efficiency calculations * Asymptotic ___ of the partial likelihood estimator. Aaron K. Han **41** (1989) 237–250
Efficiency criterion, asymptotic relative * A unified approach to estimation and orthogonality tests in linear single-equation econometric models. M. Hashem Pesaran and Richard J. Smith **44** (1990) 41–66
Efficiency indices * Goodness-of-fit in optimizing models. Hal R. Varian **46** (1990) 125–140
Efficiency levels * Production frontiers with cross-sectional and time-series variation in ___. Christopher Cornwell, Peter Schmidt, and Robin C. Sickles **46** (1990) 185–200
Efficiency measurement * Recent developments in DEA: The mathematical programming approach to frontier analysis. Lawrence M. Seiford and Robert M. Thrall **46** (1990) 7–38
Efficient scale * Largest size-___ and size efficiencies of decision-making units in data envelopment analysis. Ajay Maindiratta **46** (1990) 57–72
Elasticities, price * Price elasticities from survey data: Extensions and Indonesian results. Angus Deaton **44** (1990) 281–309
Elasticity estimation * On the asymptotic normality of Fourier flexible form estimates. A. Ronald Gallant and Geraldo Souza **50** (1991) 329–353
Electric utility behavior * Moment-based estimation and testing of stochastic frontier models. Raymond J. Kopp and John Mullahy . . . **46** (1990) 165–183
Electric utility industry * Risk and reactor safety systems adoption. Jeffrey A. Dubin and Geoffrey S. Rothwell **42** (1989) 201–218
Electricity data, Australian * A random coefficient approach to the estimation of residential end-use load profiles. Denzil G. Fiebig, Robert Bartels, and Dennis J. Aigner **50** (1991) 297–327
Electricity data (see also United States electricity)
Elliptical errors * A note on Bayesian inference in a regression model with ___. Jacek Osiewalski **48** (1991) 183–193
Elliptical multivariate analysis. Bernard M.S. van Praag and Bertram M. Wesselman **41** (1989) 189–203

EM algorithm
A constrained maximum-likelihood approach to estimating switching regressions. Robert E. Phillips **48** (1991) 241–262
Analysis of time series subject to changes in regime. James D. Hamilton **45** (1990) 39–70
Extensions of estimation methods using the ___. Paul A. Ruud **49** (1991) 305–341
Empirical Bayes estimator * An adaptive ___ of the multivariate normal means under quadratic loss. G.G. Judge, R. Carter Hill, and M.E. Bock **44** (1990) 189–213
Empirical characteristic functions * Estimation of regression coefficients with the help of characteristic functions. Kees van Montfort, Ab Mooijaart, and Jan de Leeuw **41** (1989) 267–278
Empirical estimates * Asset pricing with a FACTOR-ARCH covariance structure: ___ for Treasury bills. Robert F. Engle, Victor K. Ng, and Michael Rothschild **45** (1990) 213–237
Empirical investigation * Intertemporal asset pricing: An ___. Jay Shanken **45** (1990) 99–120
Empirical models of discrete games. Timothy F. Breshnahan and Peter C. Reiss **48** (1991) 57–81
Empirical relationship * On the ___ between several well-known inequality measures. D.J. Slottje, R.L. Basmann, and M. Nieswiadomy **42** (1989) 49–66
Employment-output relationship * The reserve-labor hypothesis, short-run pricing theories, and the ___. Steven Garber **42** (1989) 219–245
Encompassing approach * An ___ to conditional mean tests with applications to testing nonnested hypotheses. Jeffrey M. Wooldridge **45** (1990) 331–350
Encompassing principle * Testing nonnested Euler conditions with quadrature-based methods of approximation. Eric Ghysels and Alastair Hall **46** (1990) 273–308
Endowment characteristics * Inequality at birth: The scope for policy intervention. Mark R. Rosenzweig and Kenneth I. Wolpin **50** (1991) 205–228
Entropy analysis * Effects of collinearity on information about regression coefficients. Ehsan S. Soofi **43** (1990) 255–274
Entropy measures * Generalized ___ of mobility for different sexes and income levels. Esfandiar Maasoumi and Sourushe Zandvakili **43** (1990) 121–133
Envelopment analysis * Largest size-efficient scale and size efficiencies of decision-making units in data ___. Ajay Maindiratta **46** (1990) 57–72
Envelopment analysis (see also Data envelopment analysis and DEA)
Equivalence scales * The information content of ___. Richard Blundell and Arthur Lewbel **50** (1991) 49–68
Equivalent test statistics * Testing inequality constraints in linear econometric models. Frank A. Wolak **41** (1989) 205–235
Error-component model
A transformation that will circumvent the problem of autocorrelation in an ___. Badi H. Baltagi and Qi Li **48** (1991) 385–393
Estimation of the ___ with incomplete panels. Tom Wansbeek and Arie Kapteyn **41** (1989) 341–361
Error-correction representation * Seasonal integration and cointegration. S. Hylleberg, R.F. Engle, C.W.J. Granger, and B.S. Yoo **44** (1990) 215–238
Error covariance matrix
An efficient GLS estimator of triangular models with covariance restrictions. Manuel Arellano **42** (1989) 267–273
Estimation of a linear regression model with stationary ARMA(p,q) errors. Victoria Zinde-Walsh and John W. Galbraith **47** (1991) 333–357
Two-stage instrumental variable estimators for the nonlinear errors-in-variables model. Yasuo Amemiya **44** (1990) 311–332
Error estimation * Least absolute ___ in the presence of serial correlation. Andrew A. Weiss **44** (1990) 127–158

Error model * Maximum likelihood estimation of the dynamic shock-___. Damayanti Ghosh **41** (1989) 121–143
Error structure * Transformations in stochastic DEA models. Jati K. Sengupta **46** (1990) 109–123
Error symmetry * Moment-based estimation and testing of stochastic frontier models. Raymond J. Kopp and John Mullahy **46** (1990) 165–183
Error variance * Pre-testing for linear restrictions in a regression model with spherically symmetric disturbances. Judith A. Giles **50** (1991) 377–398
Error(s)
A dispersion-dependency diagnostic test for aggregation ___: With applications to monetary economics and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34
A note on Bayesian inference in a regression model with elliptical ___. Jacek Osiewalski **48** (1991) 183–193
Asymptotic optimality of generalized C(L), cross-validation, and generalized cross-validation in regression with heteroskedastic ___. Donald W.K. Andrews **47** (1991) 359–377
Estimation of a linear regression model with stationary ARMA(p,q) ___. Victoria Zinde-Walsh and John W. Galbraith **47** (1991) 333–357
On estimating and testing in a linear regression model with autocorrelated ___. Kazuhiro Ohtani **44** (1990) 333–346
Optimal invariant tests for the autocorrelation coefficient in linear regressions with stationary or nonstationary AR(1) ___. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
The Durbin-Watson ratio under infinite-variance ___. Peter C.B. Phillips and Mico Loretan **47** (1991) 85–114
The exact multi-period mean-square forecast ___ for the first-order autoregressive model with an intercept. Jan R. Magnus and Bahram Pesaran **42** (1989) 157–179
Errors, autocorrelated * Fighting the teflon factor: Comparing classical and Bayesian estimators for autocorrelated errors. Peter Kennedy and Daniel Simons **48** (1991) 15–27
Errors-in-variables models
Bounds for exact moments of estimators in the ___ and simultaneous equations. Ralph Friedmann **45** (1990) 367–384
Consistent estimation for some nonlinear ___. Cheng Hsiao **41** (1989) 159–185
Estimation and testing when explanatory variables are endogenous: An application to a demand system. C.L.F. Attfield **48** (1991) 395–408
Estimation of regression coefficients with the help of characteristic functions. Kees van Montfort, Ab Mooijaart, and Jan de Leeuw . **41** (1989) 267–278
Identification and estimation of dynamic ___. Anthony M. Bloch . . . **41** (1989) 145–158
Identification and estimation of polynomial ___. Jerry A. Hausman, Whitney K. Newey, Hidehiko Ichimura, and James L. Powell . . . **50** (1991) 273–295
Identification in restricted factor models and the evaluation of rank conditions. Paul A. Bekker **41** (1989) 5–16
Linear dynamic ___: Some structure theory. M. Deistler and B.D.O. Anderson **41** (1989) 39–63
Parametrization of factor analysis models. Giorgio Picci **41** (1989) 17–38
Two-stage instrumental variable estimators for the nonlinear ___. Yasuo Amemiya **44** (1990) 311–332
Errors of forecast * Mean squared ___ for selecting nonnested linear models and comparison with other criteria. Hiroki Tsurumi and Hajime Wago **48** (1991) 215–240
Euler conditions * Testing nonnested ___ with quadrature-based methods of approximation. Eric Ghysels and Alastair Hall **46** (1990) 273–308
Euler equation estimation methods * Using conditional moments of asset payoffs to infer the volatility of intertemporal marginal rates of substitution. A. Ronald Gallant, Lars Peter Hansen, and George Tauchen **45** (1990) 141–179

Euler equation models * Are consumption-based intertemporal capital asset pricing models structural? Eric Ghysels and Alastair Hall **45** (1990) 121–139
Exact moments * Bounds for ___ of estimators in the errors-in-variables model and simultaneous equations. Ralph Friedmann **45** (1990) 367–384
Exact multi-period mean-square forecast error * The ___ for the first-order autoregressive model with an intercept. Jan R. Magnus and Bahram Pesaran **42** (1989) 157–179
Exchange rates * A Bayesian analysis of the unit root in real ___. Peter Schotman and Herman K. van Dijk **49** (1991) 195–238
Exogeneity analysis * Bayesian multivariate ___: An application to a UK money demand equation. Mark F.J. Steel and Jean-Francois Richard **49** (1991) 239–274
Exogeneity test statistics * A unified approach to estimation and orthogonality tests in linear single-equation econometric models. M. Hashem Pesaran and Richard J. Smith **44** (1990) 41–66
Explanatory variables
Estimation and testing when ___ are endogenous: An application to a demand system. C.L.F. Attfield **48** (1991) 395–408
Personal characteristics, unemployment insurance, and the duration of unemployment. Dean A. Follmann, Matthew S. Goldberg, and Laurie May **45** (1990) 351–366
Reasonable extreme-bounds analysis. Clive W.J. Granger and Harald F. Uhlig **44** (1990) 159–170
Exponential weighting * Forecasting turning points in international output growth rates using Bayesian exponentially weighted autoregression, time-varying parameter, and pooling techniques. Arnold Zellner, Chansik Hong, and Chung-ki Min **49** (1991) 275–304
Exponentially weighted autoregression * Forecasting turning points in international output growth rates using Bayesian ___, time-varying parameter, and pooling techniques. Arnold Zellner, Chansik Hong, and Chung-ki Min **49** (1991) 275–304
Export supply * An adjustment-costs model of ___ and import demand. Denis Lawrence **46** (1990) 381–398
Extreme-bounds analysis * Reasonable ___. Clive W.J. Granger and Harald F. Uhlig **44** (1990) 159–170

F-test * Testing Slutsky symmetry in systems of linear demand equations. J.Lew Silver and Mukhtar M. Ali **41** (1989) 251–266
F-test of nested forms * A general functional form for approximating the Lorenz curve. R.L. Basmann, K.J. Hayes, D.J. Slottje, and J.D. Johnson **43** (1990) 77–90
F-test truncation rule * Asymptotic normality and consistency of seminonparametric regression estimators using an upwards ___. Brian J. Eastwood **48** (1991) 151–181
Factor analysis approach * Identification and estimation of the dynamic errors-in-variables models. Anthony M. Block **41** (1989) 145–158
Factor analysis models * Parametrization of ___. Giorgio Picci **41** (1989) 17–38
FACTOR-ARCH covariance structure * Asset pricing with a ___: Empirical estimates for Treasury bills. Robert F. Engle, Victor K. Ng, and Michael Rothschild **45** (1990) 213–237
Factor demand equations * Seminonparametric Bayesian estimation of the asymptotically ideal production model. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
Factor demand models * A note on the estimation of nonsymmetric dynamic ___. Dilip B. Madan and Ingmar R. Prucha **42** (1989) 275–283
Factor demand system * On the asymptotic normality of Fourier flexible form estimates. A. Ronald Gallant and Geraldo Souza **50** (1991) 329–353

Factor models * Identification in restricted ___ and the evaluation of rank conditions. Paul A. Bekker **41** (1989) 5–16
Factor portfolio returns * Intertemporal asset pricing: An empirical investigation. Jay Shanken **45** (1990) 99–120
Factor productivity growth * Detecting multiple outliers with an application to R&D productivity. Peter C. Reiss **43** (1990) 293–315
Factor risk premia * Intertemporal asset pricing: An empirical investigation. Jay Shanken **45** (1990) 99–120
Family size and social utility: Income distribution dominance criteria. Francois Bourguignon **42** (1989) 67–80
Farming * The role of multiplier bounds in efficiency analysis with application to Kansas ___. Russell G. Thompson, Larry N. Langemeier, Chih-Tah Lee, Euntaik Lee, and Robert M. Thrall . . . **46** (1990) 93–108
Federal Reserve System's functional cost analysis program * Measuring cost efficiency in banking: Econometric and linear programming evidence. Gary D. Ferrier and C.A. Knox Lovell **46** (1990) 229–245
Filtering techniques
Estimating integrated higher-order continuous time autoregressions with an application to money-income causality. A.C. Harvey and James H. Stock **42** (1989) 319–336
Maximum likelihood estimation of the dynamic shock-error model. Damayanti Ghosh **41** (1989) 121–143
Modeling stochastic and cyclical components of technical change: An application of the Kalman filter. Margaret E. Slade **41** (1989) 363–383
Recursive solution methods for dynamic linear rational expectations models. Mark W. Watson **41** (1989) 65–89
Financial data * On the relation between GARCH and stable processes. Casper G. de Vries **48** (1991) 313–324
Financial time series
Alternative models for conditional stock volatility. Adrian R. Pagan and G. William Schwert **45** (1990) 267–290
An econometric analysis of nonsynchronous trading. Andrew W. Lo and A. Craig MacKinlay **45** (1990) 181–211
Analysis of time series subject to changes in regime. James D. Hamilton **45** (1990) 39–70
ARCH models as diffusion approximations. Daniel B. Nelson **45** (1990) 7–38
Are consumption-based intertemporal capital asset pricing models structural? Eric Ghysels and Alastair Hall **45** (1990) 121–139
Asset pricing with a FACTOR-ARCH covariance structure: Empirical estimates for Treasury bills. Robert F. Engle, Victor K. Ng, and Michael Rothschild **45** (1990) 213–237
Econometric methods and ___. Edited by John Y. Campbell and Angelo Melino. Annals 1990-3 . . . . . **45** (1990) 1–290
Editors' introduction. Econometric methods and ___. John Y. Campbell and Angelo Melino. Annals 1990-3 . . . . . **45** (1990) 1–5
Intertemporal asset pricing: An empirical investigation. Jay Shanken **45** (1990) 99–120
Pricing foreign currency options with stochastic volatility. Angelo Melino and Stuart M. Turnbull **45** (1990) 239–265
Residual risk revisited. Bruce N. Lehmann **45** (1990) 71–97
Using conditional moments of asset payoffs to infer the volatility of intertemporal marginal rates of substitution. A. Ronald Gallant, Lars Peter Hansen, and George Tauchen **45** (1990) 141–179
Finite-sample behavior * The exact multi-period mean-square forecast error for the first-order autoregressive model with an intercept. Jan R. Magnus and Bahram Pesaran **42** (1989) 157–179
Finite-sample bias * Bounds for exact moments of estimators in the errors-in-variables model and simultaneous equations. Ralph Friedmann **45** (1990) 367–384

Finite-sample distributions
The Durbin-Watson ratio under infinite-variance errors. Peter C.B. Phillips and Mico Loretan **47** (1991) 85–114
The ___ of heteroskedasticity robust Wald statistics. Andrew Chesher and Gerard Austin **47** (1991) 153–173
Finite-sample moments * On a pooled estimator and its ___. William M. Mikhail and G.A. Ghazal **48** (1991) 195–214
Finite-sample power of linear regression autocorrelation tests. Walter Kramer and Helmut Zeisel **43** (1990) 363–372
Finite-sample powers * Limiting power of unit-root tests in time-series regression. Seiji Nabeya and Katsuto Tanaka **46** (1990) 247–271
Finite-sample properties
Estimation of the error-components model with incomplete panels. Tom Wansbeek and Arie Kapteyn **41** (1989) 341–361
On the Wald tests for globally and locally quadratic restrictions. Gordon C.R. Kemp **50** (1991) 257–272
Finite-sample risk functions * Pre-testing for linear restrictions in a regression model with spherically symmetric disturbances. Judith A. Giles **50** (1991) 377–398
First-order autocorrelation * Testing for fourth-order autocorrelation in regression disturbances when ___ is present. Maxwell L. King **41** (1989) 285–301
First-order autoregressive model
A Bayesian analysis of the unit root in real exchange rates. Peter Schotman and Herman K. van Dijk **49** (1991) 195–238
The exact multi-period mean-square forecast error for the ___ with an intercept. Jan R. Magnus and Bahram Pesaran **42** (1989) 157–179
First-order moving-average process * A note on Park and Heikes' (1983) modified approximate estimator for the ___. Askar H. Choudhury and Robert D. St. Louis **46** (1990) 399–406
Fishing industry * On the measurement of economic capacity utilization for multi-product industries. Kathleen Segerson and Dale Squires **44** (1990) 347–361
Fixed coordinate system * Parametrization of factor analysis models. Giorgio Picci **41** (1989) 17–38
Fixed-effects model * Estimation of the error-components model with incomplete panels. Tom Wansbeek and Arie Kapteyn **41** (1989) 341–361
Flexible form estimates * On the asymptotic normality of Fourier ___. A. Ronald Gallant and Geraldo Souza **50** (1991) 329–353
Forecast covariance / principal component method * A method for approximate representation of vector-valued time series and its relation to two alternatives. Masanao Aoki and Arthur Havenner **42** (1989) 181–199
Forecast error * The exact multi-period mean-square ___ for the first-order autoregressive model with an intercept. Jan R. Magnus and Bahram Pesaran **42** (1989) 157–179
Forecasting
How to live with misspecification if you must. Esfandiar Maasoumi **44** (1990) 67–86
Multi-step estimation and ___ in dynamic models. Andrew A. Weiss **48** (1991) 135–149
Forecasting turning points in international output growth rates using Bayesian exponentially weighted autoregression, time-varying parameter, and pooling techniques. Arnold Zellner, Chansik Hong, and Chung-ki Min **49** (1991) 275–304
Forecasting with demand systems: A comparative study. Marcus J. Chambers **44** (1990) 363–376
Foreign currency options * Pricing ___ with stochastic volatility. Angelo Melino and Stuart M. Turnbull **45** (1990) 239–265

Fourier flexible form estimates * On the asymptotic normality of ___. A. Ronald Gallant and Geraldo Souza **50** (1991) 329–353
Fourth-order autocorrelation * Testing for ___ in regression disturbances when first-order autocorrelation is present. Maxwell L. King **41** (1989) 285–301
Frontier analysis
A Gamma-distributed stochastic frontier model. William H. Greene **46** (1990) 141–163
Deterministic parametric and nonparametric estimation of efficiency in service production: A comparison. Hans Bjurek, Lennart Hjalmarsson, and Finn R. Forsund **46** (1990) 213–227
Editors' introduction. ___: Parametric and nonparametric approaches. Arie Y. Lewin and C.A. Knox Lovell. Annals 1990-4 . . **46** (1990) 3–5
Goodness-of-fit in optimizing models. Hal R. Varian **46** (1990) 125–140
Largest size-efficient scale and size efficiencies of decision-making units in data envelopment analysis. Ajay Maindiratta **46** (1990) 57–72
Measuring cost efficiency in banking: Econometric and linear programming evidence. Gary D. Ferrier and C.A. Knox Lovell **46** (1990) 229–245
Moment-based estimation and testing of stochastic frontier models. Raymond J. Kopp and John Mullahy **46** (1990) 165–183
Polyhedral cone-ratio DEA models with an illustrative application to large commercial banks. A. Charnes, W.W. Cooper, Z.M. Huang, and D.B. Sun **46** (1990) 73–91
Production frontiers, panel data, and time-varying technical inefficiency. Subal C. Kumbhakar **46** (1990) 201–211
Production frontiers with cross-sectional and time-series variation in efficiency levels. Christopher Cornwell, Peter Schmidt, and Robin C. Sickles **46** (1990) 185–200
Recent developments in DEA: The mathematical programming approach to ___. Lawrence M. Seiford and Robert M. Thrall **46** (1990) 7–38
Recent developments in the econometric estimation of frontiers. Paul W. Bauer **46** (1990) 39–56
The role of multiplier bounds in efficiency analysis with application to Kansas farming. Russell G. Thompson, Larry N. Langemeier, Chih-Tah Lee, Euntaik Lee, and Robert M. Thrall **46** (1990) 93–108
Transformations in stochastic DEA models. Jati K. Sengupta **46** (1990) 109–123
Frontier analysis: Parametric and nonparametric approaches. Edited by Arie Y. Lewin and C.A. Knox Lovell. Annals 1990-4 . . . . . **46** (1990) 1–245
Frontier construction * Recent developments in DEA: The mathematical programming approach to frontier analysis. Lawrence M. Seiford and Robert M. Thrall **46** (1990) 7–38
Frontier estimation * Transformations in stochastic DEA models. Jati K. Sengupta **46** (1990) 109–123
Frontier model(s)
A Gamma-distributed stochastic ___. William H. Greene **46** (1990) 141–163
Measuring cost efficiency in banking: Econometric and linear programming evidence. Gary D. Ferrier and C.A. Knox Lovell **46** (1990) 229–245
Moment-based estimation and testing of stochastic ___. Raymond J. Kopp and John Mullahy **46** (1990) 165–183
Frontier production function * Production frontiers with cross-sectional and time-series variation in efficiency levels. Christopher Cornwell, Peter Schmidt, and Robin C. Sickles **46** (1990) 185–200
Frontiers * Recent developments in the econometric estimation of ___. Paul W. Bauer **46** (1990) 39–56
Full-information maximum-likelihood estimators * Simultaneous equations with covariance restrictions. Thomas J. Rothenberg and Paul A. Ruud **44** (1990) 25–39

Full-information minimum-distance estimators * Simultaneous equations with covariance restrictions. Thomas J. Rothenberg and Paul A. Ruud **44** (1990) 25–39
Functional form
A general ___ for approximating the Lorenz curve. R.L. Basmann, K.J. Hayes, J.D. Johnson, and D.J. Slottje **43** (1990) 77–90
Remembrance of things past the distribution of earnings across occupations and the kappa criterion. Joseph G. Hirschberg and D.J. Slottje **42** (1989) 121–130
Fuzzy state representation * Statistical and measurement issues in assessing the welfare status of aged individuals and populations. Kenneth G. Manton, Max A. Woodbury, and Eric Stallard **50** (1991) 151–181

Game-theoretic formulation * Transformations in stochastic DEA models. Jati K. Sengupta **46** (1990) 109–123
Games * Empirical models of discrete ___. Timothy F. Breshnahan and Peter C. Reiss **48** (1991) 57–81
Gamma-distributed stochastic frontier model * A ___. William H. Greene **46** (1990) 141–163
GARCH * On the relation between ___ and stable processes. Casper G. de Vries **48** (1991) 313–324
GARCH processes * ARCH models as diffusion approximations. Daniel B. Nelson **45** (1990) 7–38
Gaussian ARMA process * Estimation of a linear regression model with stationary ARMA(p,q) errors. Victoria Zinde-Walsh and John W. Galbraith **47** (1991) 333–357
Gaussian censored-regression model * Bounded-influence estimators for the Tobit model. Franco Peracchi **44** (1990) 107–126
Gaussian likelihood function * Recursive solution methods for dynamic linear rational expectations models. Mark W. Watson **41** (1989) 65–89
Gaussian maximum likelihood estimator
Bounded-influence estimators for the SURE model. Franco Peracchi **48** (1991) 119–134
Estimating integrated higher-order continuous time autoregressions with an application to money-income causality. A.C. Harvey and James H. Stock **42** (1989) 319–336
General functional form * A ___ for approximating the Lorenz curve. R.L. Basmann, K.J. Hayes, J.D. Johnson, and D.J. Slottje **43** (1990) 77–90
Generalized C(L) * Asymptotic optimality of ___, cross-validation, and generalized cross-validation in regression with heteroskedastic errors. Donald W.K. Andrews **47** (1991) 359–377
Generalized entropy measures of mobility for different sexes and income levels. Esfandiar Maasoumi and Sourushe Zandvakili **43** (1990) 121–133
Generalized McFadden functional form * An adjustment-costs model of export supply and import demand. Denis Lawrence **46** (1990) 381–398
Generalized method of moments
Are consumption-based intertemporal capital asset pricing models structural? Eric Ghysels and Alastair Hall **45** (1990) 121–139
Grouped-data estimation and testing in simple labor-supply models. Joshua D. Angrist **47** (1991) 243–266
Moment-based estimation and testing of stochastic frontier models. Raymond J. Kopp and John Mullahy **46** (1990) 165–183
Pricing foreign currency options with stochastic volatility. Angelo Melino and Stuart M. Turnbull **45** (1990) 239–265
Residual risk revisited. Bruce N. Lehmann **45** (1990) 71–97

Testing nonnested Euler conditions with quadrature-based methods of approximation. Eric Ghysels and Alastair Hall **46** (1990) 273–308
Three-stage least squares with different instruments for different equations. Peter Schmidt **43** (1990) 389–394
Generic reduced form (GRF) model * How to live with misspecification if you must. Esfandiar Maasoumi **44** (1990) 67–86
Geometric mean measure * On the empirical relationship between several well-known inequality measures. D.J. Slottje, R.L. Basmann, and M. Nieswiadomy **42** (1989) 49–66
Gini coefficient(s)
A general functional form for approximating the Lorenz curve. R.L. Basmann, K.J. Hayes, D.J. Slottje, and J.D. Johnson **43** (1990) 77–90
Improving the accuracy of estimates of ___. Robert I. Lerman and Shlomo Yitzhaki **42** (1989) 43–47
Income inequality measures based on sample surveys. Fredrik Nygard and Arne Sandstrom **42** (1989) 81–95
Interpreting the magnitude of changes in measures of income inequality. McKinley L. Blackburn **42** (1989) 21–25
On the empirical relationship between several well-known inequality measures. D.J. Slottje, R.L. Basmann, and M. Nieswiadomy **42** (1989) 49–66
Optimal grouping of income and wealth data. J.B. Davies and A.F. Shorrocks **42** (1989) 97–108
Sampling variance and decomposable inequality measures. Frank A. Cowell **42** (1989) 27–41
Global maximizer * A constrained maximum-likelihood approach to estimating switching regressions. Robert E. Phillips **48** (1991) 241–262
Global regularity * Seminonparametric Bayesian estimation of the asymptotically ideal production model. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
Globally and locally quadratic restrictions * On the Wald tests for ___. Gordon C.R. Kemp **50** (1991) 257–272
GLS estimator(s)
An efficient ___ of triangular models with covariance restrictions. Manuel Arellano **42** (1989) 267–273
Fighting the teflon factor: Comparing classical and Bayesian estimators for autocorrelated errors. Peter Kennedy and Daniel Simons **48** (1991) 15–27
On estimating and testing in a linear regression model with autocorrelated errors. Kazuhiro Ohtani **44** (1990) 333–346
GNP function model * An adjustment-costs model of export supply and import demand. Denis Lawrence **46** (1990) 381–398
Goodman's correlation model * Estimation of a regression model on two or more sets of differently grouped data. Mototsugu Fukushige and Michio Hatanaka **47** (1991) 207–226
Goodness of fit
A general functional form for approximating the Lorenz curve. R.L. Basmann, K.J. Hayes, D.J. Slottje, and J.D. Johnson **43** (1990) 77–90
Linear latent variable models and covariance structures. T.W. Anderson **41** (1989) 91–119
Simulation estimation of time-series models. Bong-soo Lee and Beth Fisher Ingram **47** (1991) 197–205
Goodness-of-fit in optimizing models. Hal R. Varian **46** (1990) 125–140
Granger causality
A dispersion-dependency diagnostic test for aggregation error: With applications to monetary economics and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34

The impact of stochastic and deterministic trends on money-output causality: A multi-country investigation. Robert Krol and Lee E. Ohanian **45** (1990) 291–308
Grassmann manifold • Identification and estimation of the dynamic errors-in-variables models. Anthony M. Block **41** (1989) 145–158
Group-adjusted data • Robust estimation based on ___ in linear regression models. Kazumitsu Nawata **43** (1990) 317–336
Group income differentials • Statistical properties of between-___. Joseph L. Gastwirth, Tapan K. Nayak, and Jane-Ling Wang **42** (1989) 5–19
Grouped data
Estimation of a regression model on two or more sets of differently ___. Mototsugu Fukushige and Michio Hatanaka **47** (1991) 207–226
Improving the accuracy of estimates of Gini coefficients. Robert I. Lerman and Shlomo Yitzhaki **42** (1989) 43–47
Optimal grouping of income and wealth data. J.B. Davies and A.F. Shorrocks **42** (1989) 97–108
Statistical properties of measures of between-group income differentials. Joseph L. Gastwirth and Tapan K. Nayak **42** (1989) 5–19
Grouped-data estimation and testing in simple labor-supply models. Joshua D. Angrist **47** (1991) 243–266
Grouped heteroscedasticity • Power and robustness of jackknife and likelihood-ratio tests for ___. Subhash C. Sharma and Carmelo Giaccotto **49** (1991) 343–372
Grouping bounds for inequality measures under alternative informational assumptions. Frank A. Cowell **48** (1991) 1–14

Hankel matrix method • A method for approximate representation of vector-valued time series and its relation to two alternatives. Masanao Aoki and Arthur Havenner **42** (1989) 181–199
Hazard estimation • Nonparametric ___ with time-varying discrete covariates. Siu Fai Leung and Wing Hung Wong **45** (1990) 309–330
Hazard function
Black-white mortality inequalities. Jere R. Behrman, Robin Sickles, Paul Taubman, and Abdo Yazbeck **50** (1991) 183–203
Personal characteristics, unemployment insurance, and the duration of unemployment. Dean A. Follmann, Matthew S. Goldberg, and Laurie May **45** (1990) 351–366
Hazard model
Analysis of survival data: Estimation and specification tests using asymptotic least squares. H. Jayet and A. Moreau **48** (1991) 263–285
Asymptotic efficiency calculations of the partial likelihood estimator. Aaron K. Han **41** (1989) 237–250
Regression models for positive random variables. James B. McDonald and Richard J. Butler **43** (1990) 227–251
Hedonic regression techniques • A Bayesian approach to regression selection and estimation, with application to a price index for radio services. Brent R. Moulton **49** (1991) 169–193
Heterogeneity
A random-effects logit model of work-welfare transitions. John Enberg, Peter Gottschalk, and Douglas Wolf **43** (1990) 63–75
Regression models for positive random variables. James B. McDonald and Richard J. Butler **43** (1990) 227–251
Heteroskedastic errors • Asymptotic optimality of generalized C(L), cross-validation, and generalized cross-validation in regression with ___. Donald W.K. Andrews **47** (1991) 359–377

Heteroskedasticity
A random coefficient approach to the estimation of residential end-use load profiles. Denzil G. Fiebig, Robert Bartels, and Dennis J. Aigner **50** (1991) 297–327
Intertemporal asset pricing: An empirical investigation. Jay Shanken **45** (1990) 99–120
Power and robustness of jackknife and likelihood-ratio tests for grouped ___. Subhash C. Sharma and Carmelo Giaccotto **49** (1991) 343–372
Some risk results for a two-stage pre-test estimator in the case of possible ___. Ahmet Ozcam and George G. Judge **48** (1991) 355–371
Testing for strong serial correlation and dynamic conditional ___ in multiple regression. P.M. Robinson **47** (1991) 67–84
Heteroskedasticity robust Wald statistics * The finite-sample distributions of ___. Andrew Chesher and Gerard Austin **47** (1991) 153–173
Higher-order continuous time autoregressions * Estimating integrated ___ with an application to money-income causality. A.C. Harvey and James H. Stock **42** (1989) 319–336
Homogeneity restrictions * Forecasting with demand systems: A comparative study. Marcus J. Chambers **44** (1990) 363–376
Household survey data * Price elasticities from survey data: Extensions and Indonesian results. Angus Deaton **44** (1990) 281–309
Household wealth * Methodological issues in the estimation of the size distribution of ___. Edward N. Wolff **43** (1990) 179–195
Hypergeometric functions * Bounds for exact moments of estimators in the errors-in-variables model and simultaneous equations. Ralph Friedmann **45** (1990) 367–384
Hypothesis testing
A posterior odds analysis of the weekend effect. Robert A. Connolly **49** (1991) 51–104
Unit-roots tests for time-series data with a linear time trend. Said E. Said **47** (1991) 285–303

Identifiability
Linear dynamic errors-in-variables models: Some structure theory. M. Deistler and B.D.O. Anderson **41** (1989) 39–63
Linear latent variable models and covariance structures. T.W. Anderson **41** (1989) 91–119
Parametrization of factor analysis models. Giorgio Picci **41** (1989) 17–38
Recursive solution methods for dynamic linear rational expectations models. Mark W. Watson **41** (1989) 65–89
Identification
Aggregation and ___ in consumer demand systems. J.M. Heineke and H.M. Shefrin **44** (1990) 377–390
Another look at the ___ of current rational-expectations models. Janne Rayner **47** (1991) 305–331
Consistent estimation for some nonlinear errors-in-variables models. Cheng Hsiao **41** (1989) 159–185
Mode regression. Myoung-jai Lee **42** (1989) 337–349
The simultaneous-equations model revisited: Statistical adequacy and ___. Aris Spanos **44** (1990) 87–105
Identification and estimation of dynamic errors-in-variables models. Anthony M. Bloch **41** (1989) 145–158
Identification and estimation of polynomial errors-in-variables models. Jerry A. Hausman, Whitney K. Newey, Hidehiko Ichimura, and James L. Powell **50** (1991) 273–295

Identification in restricted factor models and the evaluation of rank conditions. Paul A. Bekker **41** (1989) 5–16
Imhof procedure * The finite-sample distributions of heteroskedasticity robust Wald statistics. Andrew Chesher and Gerard Austin **47** (1991) 153–173
Import demand * An adjustment-costs model of export supply and ___. Denis Lawrence **46** (1990) 381–398
Impulse response functions * A note on the asymptotic distribution of ___ of estimated VAR models with orthogonal residuals. Helmut Lutkepohl **42** (1989) 371–376
Incoherency problem * Coherency of the indirect translog demand system with binding nonnegativity constraints. Arthur van Soest and Peter Kooreman **44** (1990) 391–400
Income and wealth data * Optimal grouping of ___. J.B. Davies and A.F. Shorrocks **42** (1989) 97–108
Income causality * Estimating integrated higher-order continuous time autoregressions with an application to ___. A.C. Harvey and James H. Stock **42** (1989) 319–336
Income-dependent price schedules * The poverty concept when prices are income-dependent. Bernard M.S. van Praag and Michael R. Baye **43** (1990) 153–166
Income-dependent prices * The poverty concept when prices are income-dependent. Bernard M.S. van Praag and Michael R. Baye . . **43** (1990) 153–166
Income differentials * Statistical properties of between-group ___. Joseph L. Gastwirth, Tapan K. Nayak, and Jane-Ling Wang **42** (1989) 5–19
Income distribution
A dispersion-dependency diagnostic test for aggregation error: With applications to monetary economics and ___. William A. Barnett and Apostolos Serletis **43** (1990) 5–34
A multinomial probability model of size ___. Charles A. Diamond, Curtis J. Simon, and John T. Warner **43** (1990) 43–61
Family size and social utility: ___ dominance criteria. Francois Bourguignon **42** (1989) 67–80
Income distribution movements and aggregate money illusion. Arthur Lewbel **43** (1990) 35–42
Income evaluation approach * Ordinal and cardinal utility: An integration of the two dimensions of the welfare concept. Bernard M.S. van Praag **50** (1991) 69–89
Income inequality * Interpreting the magnitude of changes in measures of ___. McKinley L. Blackburn **42** (1989) 21–25
Income inequality measures * On the relationship between ___ and social welfare functions. Camilo Dagum **43** (1990) 91–102
Income inequality measures based on sample surveys. Fredrik Nygard and Arne Sandstrom **42** (1989) 81–95
Incomplete moments
A multinomial probability model of size income distribution. Charles A. Diamond, Curtis J. Simon, and John T. Warner **43** (1990) 43–61
Using ___ to measure inequality. Richard J. Butler and James B. McDonald **42** (1989) 109–119
Incomplete panels * Estimation of the error-components model with ___. Tom Wansbeek and Arie Kapteyn **41** (1989) 341–361
Index number theory * A dispersion-dependency diagnostic test for aggregation error: With applications to monetary economics and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34
Index numbers * Normative ___. Daniel T. Slesnick **50** (1991) 107–130
Indirect translog demand system * Coherency of the ___ with binding nonnegativity constraints. Arthur van Soest and Peter Kooreman . . . **44** (1990) 391–400

Individual preference maps * The information content of equivalence scales. Richard Blundell and Arthur Lewbel **50** (1991) 49–68
Indonesian results * Price elasticities from survey data: Extensions and ___. Angus Deaton **44** (1990) 281–309
Induced work participation and the returns to experience for welfare women: Evidence from a social experiment. Dan Steinberg **41** (1989) 321–340
Industries, multi-product * On the measurement of economic capacity utilization for multi-product industries. Kathleen Segerson and Dale Squires **44** (1990) 347–361
Inefficiency * Production frontiers, panel data, and time-varying technical ___. Subal C. Kumbhakar **46** (1990) 201–211
Inequality
Continuously distributed attributes and measures of multivariate ___. Esfandiar Maasoumi **42** (1989) 131–144
Econometric issues in analyzing ___—Part I: Estimation. Edited by Daniel Slottje. Annals 1989-3 . . . . . **42** (1989) 1–155
Editor's introduction. Econometric issues in analyzing ___—Part I: Estimation. Daniel Slottje. Annals 1989-3 . . . . . **42** (1989) 1–3
Family size and social utility: Income distribution dominance criteria. Francois Bourguignon **42** (1989) 67–80
Improving the accuracy of estimates of Gini coefficients. Robert I. Lerman and Shlomo Yitzhaki **42** (1989) 43–47
Income ___ measures based on sample surveys. Fredrik Nygard and Arne Sandstrom **42** (1989) 81–95
Inflation, relative price variation, and ___. Daniel T. Slesnick **43** (1990) 135–151
Interpreting the magnitude of changes in measures of income ___. McKinley L. Blackburn **42** (1989) 21–25
On the empirical relationship between several well-known ___ measures. D.J. Slottje, R.L. Basmann, and M. Nieswiadomy **42** (1989) 49–66
Optimal grouping of income and wealth data. J.B. Davies and A.F. Shorrocks **42** (1989) 97–108
Remembrance of things past the distribution of earnings across occupations and the kappa criterion. Joseph G. Hirschberg and D.J. Slottje **42** (1989) 121–130
Sampling variance and decomposable ___ measures. Frank A. Cowell **42** (1989) 27–41
Statistical properties of between-group income differentials. Joseph L. Gastwirth, Tapan K. Nayak, and Jane-Ling Wang **42** (1989) 5–19
The development of international ___: 1960–1985. Henri Theil **42** (1989) 145–155
Using incomplete moments to measure ___. Richard J. Butler and James B. McDonald **42** (1989) 109–119
Inequality and the standard of living. Dale W. Jorgensen and Daniel T. Slesnick **43** (1990) 103–120
Inequality analysis
A general functional form for approximating the Lorenz curve. R.L. Basmann, K.J. Hayes, D.J. Slottje, and J.D. Johnson **43** (1990) 77–90
An intervention analysis of the War on Poverty: Poverty's persistence and political-business cycle implications. Thomas B. Fomby and Kathy J. Hayes **43** (1990) 197–212
Inequality at birth: The scope for policy intervention. Mark R. Rosenzweig and Kenneth I. Wolpin **50** (1991) 205–228
Is the size distribution of income a random walk? Kathy Hayes, D.J. Slottje, Susan Porter-Hudak, and Gerald Scully **43** (1990) 213–226
Measuring wealth in a simple two-period model. John Creedy **43** (1990) 167–177
Methodological issues in the estimation of the size distribution of household wealth. Edward N. Wolff **43** (1990) 179–195

Inequality constraints * Testing ___ in linear econometric models. Frank A. Wolak **41** (1989) 205–235
Inequality indices
Improving the accuracy of estimates of Gini coefficients. Robert I. Lerman and Shlomo Yitzhaki **42** (1989) 43–47
Interpreting the magnitude of changes in measures of income inequality. McKinley L. Blackburn **42** (1989) 21–25
Optimal grouping of income and wealth data. J.B. Davies and A.F. Shorrocks **42** (1989) 97–108
Sampling variance and decomposable inequality measures. Frank A. Cowell **42** (1989) 27–41
Statistical properties of measures of between-group income differentials. Joseph L. Gastwirth and Tapan K. Nayak **42** (1989) 5–19
Inequality measures
Grouping bounds for ___ under alternative informational assumptions. Frank A. Cowell **48** (1991) 1–14
Income ___ based on sample surveys. Fredrik Nygard and Arne Sandstrom **42** (1989) 81–95
On the empirical relationship between several well-known ___. D.J. Slottje, R.L. Basmann, and M. Nieswiadomy **42** (1989) 49–66
On the relationship between income ___ and social welfare functions. Camilo Dagum **43** (1990) 91–102
Sampling variance and decomposable ___. Frank A. Cowell **42** (1989) 27–41
Inequality, racial * Black-white mortality inequalities. Jere R. Behrman, Robin Sickles, Paul Taubman, and Abdo Yazbeck **50** (1991) 183–203
Inference
A note on Bayesian ___ in a regression model with elliptical errors. Jacek Osiewalski **48** (1991) 183–193
Consistent estimation for some nonlinear errors-in-variables models. Cheng Hsiao **41** (1989) 159–185
Identification and estimation of the dynamic errors-in-variables models. Anthony M. Block **41** (1989) 145–158
Linear latent variable models and covariance structures. T.W. Anderson **41** (1989) 91–119
Maximum likelihood estimation of the dynamic shock-error model. Damayanti Ghosh **41** (1989) 121–143
Optimal invariant tests for the autocorrelation coefficient in linear regressions with stationary or nonstationary AR(1) errors. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
Infinite-variance errors * The Durbin-Watson ratio under ___. Peter C.B. Phillips and Mico Loretan **47** (1991) 85–114
Inflation, relative price variation, and inequality. Daniel T. Slesnick **43** (1990) 135–151
Influence estimators
Bounded-___ for the Tobit model. Franco Peracchi **44** (1990) 107–126
Bounded-___ for the SURE model. Franco Peracchi **48** (1991) 119–134
Influence statistics * Detecting multiple outliers with an application to R&D productivity. Peter C. Reiss **43** (1990) 293–315
Information
Effects of collinearity on ___ about regression coefficients. Ehsan S. Soofi **43** (1990) 255–274
The ___ content of equivalence scales. Richard Blundell and Arthur Lewbel **50** (1991) 49–68
Information matrix
Classical tests for contemporaneously uncorrelated disturbances in the linear simultaneous equations model. Darrell A. Turkington **42** (1989) 299–317

Maximum likelihood estimation of the dynamic shock-error model. Damayanti Ghosh **41** (1989) 121–143
Information-matrix test * The small-sample performance of the ___. Chris Orme **46** (1990) 309–331
Information-theoretic diagnostics * Effects of collinearity on information about regression coefficients. Ehsan S. Soofi **43** (1990) 255–274
Informational assumptions * Grouping bounds for inequality measures under alternative ___. Frank A. Cowell **48** (1991) 1–14
Instrument admissibility * A unified approach to estimation and orthogonality tests in linear single-equation econometric models. M. Hashem Pesaran and Richard J. Smith **44** (1990) 41–66
Instrumental variable approach * Testing for unit roots in autoregressive moving average models: An ___. Sastry G. Pantula and Alastair Hall **48** (1991) 325–353
Instrumental variable estimation
Consistent estimation for some nonlinear errors-in-variables models. Cheng Hsiao **41** (1989) 159–185
Production frontiers with cross-sectional and time-series variation in efficiency levels. Christopher Cornwell, Peter Schmidt and Robin C. Sickles **46** (1990) 185–200
Instrumental variable estimators * Two-stage ___ for the nonlinear errors-in-variables model. Yasuo Amemiya **44** (1990) 311–332
Instrumental variables
Grouped-data estimation and testing in simple labor-supply models. Joshua D. Angrist **47** (1991) 243–266
Identification and estimation of polynomial errors-in-variables models. Jerry A. Hausman, Whitney K. Newey, Hidehiko Ichimura, and James L. Powell **50** (1991) 273–295
Instrumental variables estimates * The classical principles of testing using ___. Michael A. Magdalinos **44** (1990) 241–279
Insurance * Personal characteristics, unemployment ___ , and the duration of unemployment. Dean A. Follmann, Matthew S. Goldberg, and Laurie May **45** (1990) 351–366
Insurance rate-making * A statistical perspective on ___. Cheng Hsiao, Changseob Kim, and Grant Taylor **44** (1990) 5–24
Integer problem * Grouping bounds for inequality measures under alternative informational assumptions. Frank A. Cowell **48** (1991) 1–14
Integer program * Largest size-efficient scale and size efficiencies of decision-making units in data envelopment analysis. Ajay Maindiratta **46** (1990) 57–72
Integrated higher-order continuous time autoregressions * Estimating ___ with an application to money-income causality. A.C. Harvey and James H. Stock **42** (1989) 319–336
Integration
A Bayesian analysis of simultaneous equation models by combining recursive analytical and numerical approaches. Mark F.J. Steel **48** (1991) 83–117
Seasonal ___ and cointegration. S. Hylleberg, R.F. Engle, C.W.J. Granger, and B.S. Yoo **44** (1990) 215–238
The impact of stochastic and deterministic trends on money-output causality: A multi-country investigation. Robert Krol and Lee E. Ohanian **45** (1990) 291–308
Interactive random-coefficient regression models * A note concerning specifications of ___. Joseph P. Gatto, Harry H. Kelejian, and Scott W. Stephan **47** (1991) 273–284
Intercept * The exact multi-period mean-square forecast error for the first-order autoregressive model with an ___. Jan R. Magnus and Bahram Pesaran **42** (1989) 157–179

Interdistributional income inequality * Statistical properties of measures of between-group income differentials. Joseph L. Gastwirth and Tapan K. Nayak **42** (1989) 5–19
International inequality * The development of ___: 1960–1985. Henri Theil **42** (1989) 145–155
International output growth rates * Forecasting turning points in ___ using Bayesian exponentially weighted autoregression, time-varying parameter, and pooling techniques. Arnold Zellner, Chansik Hong, and Chung-ki Min **49** (1991) 275–304
Intertemporal asset pricing: An empirical investigation. Jay Shanken **45** (1990) 99–120
Intertemporal capital asset pricing models * Are consumption-based ___structural? Eric Ghysels and Alastair Hall **45** (1990) 121–139
Intertemporal marginal rates of substitution * Using conditional moments of asset payoffs to infer the volatility of ___. A. Ronald Gallant, Lars Peter Hansen, and George Tauchen **45** (1990) 141–179
Interval boundaries * Grouping bounds for inequality measures under alternative informational assumptions. Frank A. Cowell **48** (1991) 1–14
Interval calculations * A numerical methods approach to calculating cost-of-living indices. Susan Porter-Hudak and Kathy Hayes **50** (1991) 91–105
Interval coverage * Asymptotic normality and consistency of semi-nonparametric regression estimators using an upwards F test truncation rule. Brian J. Eastwood **48** (1991) 151–181
Intervention analysis * An ___ of the War on Poverty: Poverty's persistence and political-business cycle implications. Thomas B. Fomby and Kathy J. Hayes **43** (1990) 197–212
Invariant tests * Optimal ___ for the autocorrelation coefficient in linear regressions with stationary or nonstationary AR(1) errors. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
Iso-elastic utility function * Measuring wealth in a simple two-period model. John Creedy **43** (1990) 167–177
Ito processes * ARCH models as diffusion approximations. Daniel B. Nelson **45** (1990) 7–38

Jackknife and likelihood-ratio tests * Power and robustness of ___ for grouped heteroscedasticity. Subhash C. Sharma and Carmelo Giaccotto **49** (1991) 343–372
Jackknife estimators * The finite-sample distributions of heteroskedasticity robust Wald statistics. Andrew Chesher and Gerard Austin . . . **47** (1991) 153–173
Jacobian matrices
Identification and estimation of polynomial errors-in-variables models. Jerry A. Hausman, Whitney K. Newey, Hidehiko Ichimura, and James L. Powell **50** (1991) 273–295
Identification in restricted factor models and the evaluation of rank conditions. Paul A. Bekker **41** (1989) 5–16
On the Wald tests for globally and locally quadratic restrictions. Gordon C.R. Kemp **50** (1991) 257–272
Joint distribution * Continuously distributed attributes and measures of multivariate inequality. Esfandiar Maasoumi **42** (1989) 131–144
Joint integration * The impact of stochastic and deterministic trends on money-output causality: A multi-country investigation. Robert Krol and Lee E. Ohanian **45** (1990) 291–308

k-class estimators
A note on the existence of moments of ___ when k is negative. Terrence Kinal **48** (1991) 409–410
A unified approach to estimation and orthogonality tests in linear single-equation econometric models. M. Hashem Pesaran and Richard J. Smith **44** (1990) 41–66

k-class instrumental variables estimation * The classical principles of testing using instrumental variables estimates. Michael A. Magdalinos **44** (1990) 241–279
Kalman filter
Estimating integrated higher-order continuous time autoregressions with an application to money-income causality. A.C. Harvey and James H. Stock **42** (1989) 319–336
Maximum likelihood estimation of the dynamic shock-error model. Damayanti Ghosh **41** (1989) 121–143
Modeling stochastic and cyclical components of technical change: An application of the ___. Margaret E. Slade **41** (1989) 363–383
Recursive solution methods for dynamic linear rational expectations models. Mark W. Watson **41** (1989) 65–89
Kansas farming * The role of multiplier bounds in efficiency analysis with application to ___. Russell G. Thompson, Larry N. Langemeier, Chih-Tah Lee, Euntaik Lee, and Robert M. Thrall **46** (1990) 93–108
Kappa criterion * Remembrance of things past the distribution of earnings across occupations and the ___. Joseph G. Hirschberg and D.J. Slottje **42** (1989) 121–130
Klein's model I * A Bayesian analysis of simultaneous equation models by combining recursive analytical and numerical approaches. Mark F.J. Steel **48** (1991) 83–117

Labor hypothesis * The reserve-___ , short-run pricing theories, and the employment-output relationship. Steven Garber **42** (1989) 219–245
Labor-supply models * Grouped-data estimation and testing in simple ___. Joshua D. Angrist **47** (1991) 243–266
Lagrange multiplier tests
An encompassing approach to conditional mean tests with applications to testing nonnested hypotheses. Jeffrey M. Wooldrige **45** (1990) 331–350
Asymptotic relative efficiency of the classical test statistics under misspecification. Pentti Saikkonen **42** (1989) 351–369
Classical tests for contemporaneously uncorrelated disturbances in the linear simultaneous equations model. Darrell A. Turkington **42** (1989) 299–317
Testing for strong serial correlation and dynamic conditional heteroskedasticity in multiple regression. P.M. Robinson **47** (1991) 67–84
The classical principles of testing using instrumental variables estimates. Michael A. Magdalinos **44** (1990) 241–279
Large-sample properties * Statistical properties of measures of between-group income differentials. Joseph L. Gastwirth and Tapan K. Nayak **42** (1989) 5–19
Large-sample results * Income inequality measures based on sample surveys. Fredrik Nygard and Arne Sandstrom **42** (1989) 81–95
Largest size-efficient scale and size efficiencies of decision-making units in data envelopment analysis. Ajay Maindiratta **46** (1990) 57–72
Laspeyres index * Normative index numbers. Daniel T. Slesnick **50** (1991) 107–130
Latent variable framework * The reserve-labor hypothesis, short-run pricing theories, and the employment-output relationship. Steven Garber **42** (1989) 219–245
Latent variable method * Inequality at birth: The scope for policy intervention. Mark R. Rosenzweig and Kenneth I. Wolpin **50** (1991) 205–228
Latent variables models
Consistent estimation for some nonlinear errors-in-variables models. Cheng Hsiao **41** (1989) 159–185
Editors' introduction. ___. Dennis J. Aigner and Manfred Deistler. Annals 1989-2 . . . . . **41** (1989) 1–3

Identification and estimation of dynamic errors-in-variables models. Anthony M. Bloch **41** (1989) 145–158
Identification in restricted factor models and the evaluation of rank conditions. Paul A. Bekker **41** (1989) 5–16
Linear dynamic errors-in-variables models: Some structure theory. M. Deistler and B.D.O. Anderson **41** (1989) 39–63
Linear ___ and covariance structures. T.W. Anderson **41** (1989) 91–119
Maximum likelihood estimation of the dynamic shock-error model. Damayanti Ghosh **41** (1989) 121–143
Parametrization of factor analysis models. Giorgio Picci **41** (1989) 17–38
Recursive solution methods for dynamic linear rational expectations models. Mark W. Watson **41** (1989) 65–89
Latent variables models. Edited by Dennis J. Aigner and Manfred Deistler. Annals 1989-2 . . . . . **41** (1989) 1–185
Latent variables models (see also Errors-in-variables or Factor analysis models)
Least absolute error estimation in the presence of serial correlation. Andrew A. Weiss **44** (1990) 127–158
Least squares * Three-stage ___ with different instruments for different equations. Peter Schmidt **43** (1990) 389–394
Least squares estimator
A note on the application of the non-linear two-stage ___ to a Box-Cox transformed model. J. Daniel Khazzoom **42** (1989) 377–379
Bounds for exact moments of estimators in the errors-in-variables model and simultaneous equations. Ralph Friedmann **45** (1990) 367–384
Estimating disequilibrium models with limited a priori price-adjustment information. Walter J. Mayer **41** (1989) 303–320
Least squares forecasts * The exact multi-period mean-square forecast error for the first-order autoregressive model with an intercept. Jan R. Magnus and Bahram Pesaran **42** (1989) 157–179
Least squares model * Identification and estimation of the dynamic errors-in-variables models. Anthony M. Bloch **41** (1989) 145–158
Leverage measures
Detecting multiple outliers with an application to R&D productivity. Peter C. Reiss **43** (1990) 293–315
The finite-sample distributions of heteroskedasticity robust Wald statistics. Andrew Chesher and Gerard Austin **47** (1991) 153–173
Likelihood dominance criterion * The ___: A new approach to model selection. Robert A. Pollak and Terence J. Wales **47** (1991) 227–242
Likelihood estimation * Maximum ___ of the dynamic shock-error model. Damayanti Ghosh **41** (1989) 121–143
Likelihood estimator * Asymptotic efficiency calculations of the partial ___. Aaron K. Han **41** (1989) 237–250
Likelihood ratio tests
An intervention analysis of the War on Poverty: Poverty's persistence and political-business cycle implications. Thomas B. Fomby and Kathy J. Hayes **43** (1990) 197–212
Asymptotic relative efficiency of the classical test statistics under misspecification. Pentti Saikkonen **42** (1989) 351–369
Pooling states in the multinomial logit model. J.S. Cramer and G. Ridder **47** (1991) 267–272
Power and robustness of jackknife and ___ for grouped heteroscedasticity. Subhash C. Sharma and Carmelo Giaccotto **49** (1991) 343–372
The classical principles of testing using instrumental variables estimates. Michael A. Magdalinos **44** (1990) 241–279
Limit theorems * Linear latent variable models and covariance structures. T.W. Anderson **41** (1989) 91–119

Limited a priori price-adjustment information * Estimating disequilibrium models with ___. Walter J. Mayer **41** (1989) 303–320
Limiting distributions
Testing for unit roots in autoregressive moving average models: An instrumental variable approach. Sastry G. Pantula and Alastair Hall **48** (1991) 325–353
Unit-roots tests for time-series data with a linear time trend. Said E. Said **47** (1991) 285–303
Limiting power * Finite sample power of linear regression autocorrelation tests. Walter Kramer and Helmut Zeisel **43** (1990) 363–372
Limiting power of unit-root tests in time-series regression. Seiji Nabeya and Katsuto Tanaka **46** (1990) 247–271
Linear demand equations * Testing Slutsky symmetry in systems of ___. J. Lew Silver and Mukhtar M. Ali **41** (1989) 251–266
Linear dynamic errors-in-variables models: Some structure theory. M. Deistler and B.D.O. Anderson **41** (1989) 39–63
Linear econometric models * Testing inequality constraints in ___. Frank A. Wolak **41** (1989) 205–235
Linear exponential family * Specification testing and quasi-maximum-likelihood estimation. Jeffrey M. Wooldridge **48** (1991) 29–55
Linear factor models * Identification in restricted factor models and the evaluation of rank conditions. Paul A. Bekker **41** (1989) 5–16
Linear hypotheses * The classical principles of testing using instrumental variables estimates. Michael A. Magdalinos **44** (1990) 241–279
Linear latent variable models and covariance structures. T.W. Anderson **41** (1989) 91–119
Linear model(s)
Estimation of time-dependent parameters in ___ using cross-sections, panels, or both. Theo Nijman and Marno Verbeek **46** (1990) 333–346
Mean squared errors of forecast for selecting nonnested ___ and comparison with other critiria. Hiroki Tsurumi and Hajime Wago **48** (1991) 215–240
On multiple diagnostic procedures for the ___. Grant H. Hillier . . . **47** (1991) 47–66
Linear production possibility set * The role of multiplier bounds in efficiency analysis with application to Kansas farming. Russell G. Thompson, Larry N. Langemeier, Chih-Tah Lee, Euntaik Lee, and Robert M. Thrall **46** (1990) 93–108
Linear programming evidence * Measuring cost efficiency in banking: Econometric and ___. Gary D. Ferrier and C.A. Knox Lovell **46** (1990) 229–245
Linear rational expectations models * Recursive solution methods for dynamic ___. Mark W. Watson **41** (1989) 65–89
Linear regression
On the Wald tests for globally and locally quadratic restrictions. Gordon C.R. Kemp **50** (1991) 257–272
Power and robustness of jackknife and likelihood-ratio tests for grouped heteroscedasticity. Subhash C. Sharma and Carmelo Giaccotto **49** (1991) 343–372
The classical principles of testing using instrumental variables estimates. Michael A. Magdalinos **44** (1990) 241–279
Linear regression autocorrelation tests * Finite sample power of ___. Walter Kramer and Helmut Zeisel **43** (1990) 363–372
Linear regression model(s)
Bootstrapping improved estimators for ___. David Brownstone **44** (1990) 171–187
Estimation of a ___ with stationary ARMA(p,q) errors. Victoria Zinde-Walsh and John W. Galbraith **47** (1991) 333–357
On estimating and testing in a ___ with autocorrelated errors. Kazuhiro Ohtani **44** (1990) 333–346

Robust estimation based on grouped-adjusted data in ___. Kazumitsu Nawata **43** (1990) 317–336
Linear regressions * Optimal invariant tests for the autocorrelation coefficient in ___ with stationary or nonstationary AR(1) errors. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
Linear restrictions * Pre-testing for ___ in a regression model with spherically symmetric disturbances. Judith A. Giles **50** (1991) 377–398
Linear simultaneous equations model * Classical tests for contemporaneously uncorrelated disturbances in the ___. Darrell A. Turkington **42** (1989) 299–317
Linear single-equation econometric models * A unified approach to estimation and orthogonality tests in ___. M. Hashem Pesaran and Richard J. Smith **44** (1990) 41–66
Linear time series * Seasonal integration and cointegration. S. Hylleberg, R.F. Engle, C.W.J. Granger, and B.S. Yoo **44** (1990) 215–238
Linear time trend * Unit-root test for time-series data with a ___. Said E. Said **47** (1991) 285–303
Loan market, U.S. commercial * Estimating disequilibrium models with limited a priori price-adjustment information. Walter J. Mayer **41** (1989) 303–320
Local alternatives * Testing nonnested Euler conditions with quadrature-based methods of approximation. Eric Ghysels and Alastair Hall **46** (1990) 273–308
Locally best tests * Optimal invariant tests for the autocorrelation coefficient in linear regressions with stationary or nonstationary AR(1) errors. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
Locally quadratic restrictions * On the Wald tests for globally and ___. Gordon C.R. Kemp **50** (1991) 257–272
Log-differenced data * The impact of stochastic and deterministic trends on money-output causality: A multi-country investigation. Robert Krol and Lee E. Ohanian **45** (1990) 291–308
Log-likelihood * Multiple roots of the Tobit ___. William Greene **46** (1990) 365–380
Log-likelihood function * Analysis of time series subject to changes in regime. James D. Hamilton **45** (1990) 39–70
Log-linear demand system * A numerical methods approach to calculating cost-of-living indices. Susan Porter-Hudak and Kathy Hayes **50** (1991) 91–105
Log-linear regression model * Regression models for positive random variables. James B. McDonald and Richard J. Butler **43** (1990) 227–251
Log-survival function * Analysis of survival data: Estimation and specification tests using asymptotic least squares. H. Jayet and A. Moreau **48** (1991) 263–285
Logit maximum-likelihood * A semiparametric structural analysis of the idling of cement kilns. Sanghamitra Das **50** (1991) 235–256
Logit model(s)
A random-effects ___ of work-welfare transactions. John Enberg, Peter Gottschalk, and Douglas Wolf **43** (1990) 63–75
On the compatibility of nested ___ with utility maximization. Axel Borsch-Supan **43** (1990) 373–388
Pooling states in the multinominal ___. J.S. Cramer and G. Ridder **47** (1991) 267–272
Long memory process * Testing for strong serial correlation and dynamic conditional heteroskedasticity in multiple regression. P.M. Robinson **47** (1991) 67–84
Lorenz curve
A general functional form for approximating the ___. R.L. Basmann, K.J. Hayes, J.D. Johnson, and D.J. Slottje **43** (1990) 77–90
On the empirical relationship between several well-known inequality measures. D.J. Slottje, R.L. Basmann, and M. Nieswiadomy **42** (1989) 49–66

Lorenz-type graphical procedure * The development of international inequality: 1960–1985. Henri Theil **42** (1989) 145–155
Loss * An adaptive empirical Bayes estimator of the multivariate normal means under quadratic ___. G.G. Judge, R. Carter Hill, and M.E. Bock **44** (1990) 189–213
Loss function * Mode regression. Myoung-jai Lee **42** (1989) 337–349

M-estimators * Bounded-influence estimators for the SURE model. Franco Peracchi **48** (1991) 119–134
Mallows' C(p) criterion and unbiasedness of model selection. Masahito Kobayashi and Shinichi Sakata **45** (1990) 385–395
Manufacturing data * Seminonparametric Bayesian estimation of the asymptotically ideal production model. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
Marginal rates of substitution * Using conditional moments of asset payoffs to infer the volatility of intertemporal ___. A. Ronald Gallant, Lars Peter Hansen, and George Tauchen **45** (1990) 141–179
Market equilibrium model * Demand conditions, regulation, and the measurement of productivity. Elie Appelbaum and Joseph Berechman **47** (1991) 379–400
Market model parameter estimates * Residual risk revisited. Bruce N. Lehmann **45** (1990) 71–97
Markovian model construction * A method for approximate representation of vector-valued time series and its relation to two alternatives. Masanao Aoki and Arthur Havenner **42** (1989) 181–199
Martingale hypothesis * Spectral based testing of the ___. Steven N. Durlauf **50** (1991) 355–376
Mathematical programming approach * Recent developments in DEA: The ___ to frontier analysis. Lawrence M. Seiford and Robert M. Thrall **46** (1990) 7–38
Matrix test * The small-sample performance of the information-___. Chris Orme **46** (1990) 309–331
Maximization * On the compatibility of nested logit models with utility ___. Axel Borsch-Supan **43** (1990) 373–388
Maximum-likelihood approach * A constrained ___ to estimating switching regressions. Robert E. Phillips **48** (1991) 241–262
Maximum-likelihood estimation
A gamma-distributed stochastic frontier model. William H. Greene **46** (1990) 141–163
A transformation that will circumvent the problem of autocorrelation in an error-component model. Badi H. Baltagi and Qi Li **48** (1991) 385–393
A unified approach to estimation and orthogonality tests in linear single-equation econometric models. M. Hashem Pesaran and Richard J. Smith **44** (1990) 41–66
Identification and estimation of the dynamic errors-in-variables models. Anthony M. Bloch **41** (1989) 145–158
Production frontiers, panel data, and time-varying technical inefficiency. Subal C. Kumbhakar **46** (1990) 201–211
Seminonparametric Bayesian estimation of the asymptotically ideal production model. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
Specification testing and quasi-___. Jeffrey M. Wooldridge **48** (1991) 29–55
Maximum-likelihood estimation of the dynamic shock-error model. Damayanti Ghosh **41** (1989) 121–143

Maximum-likelihood estimator
Estimating integrated higher-order continuous time autoregressions with an application to money-income causality. A.C. Harvey and James H. Stock **42** (1989) 319–336
Estimation of the error-components model with incomplete panels. Tom Wansbeek and Arie Kapteyn **41** (1989) 341–361
Induced work participation and the returns to experience for welfare women: Evidence from a social experiment. Dan Steinberg **41** (1989) 321–340
Simultaneous equations with covariance restrictions. Thomas J. Rothenberg and Paul A. Ruud **44** (1990) 25–39
Maximum-score estimation * A semiparametric structural analysis of the idling of cement kilns. Sanghamitra Das **50** (1991) 235–256
McFadden functional form * An adjustment-costs model of export supply and import demand. Denis Lawrence **46** (1990) 381–398
Mean scaling * Income distribution movements and aggregate money illusion. Arthur Lewbel **43** (1990) 35–42
Mean-square errors
Bounds for exact moments of estimators in the errors-in-variables model and simultaneous equations. Ralph Friedmann **45** (1990) 367–384
Fighting the teflon factor: Comparing classical and Bayesian estimators for autocorrelated errors. Peter Kennedy and Daniel Simons **48** (1991) 15–27
Mean-square forecast error * The exact multi-period ___ for the first-order autoregressive model with an intercept. Jan R. Magnus and Bahram Pesaran **42** (1989) 157–179
Mean-squared errors of forecast for selecting nonnested linear models and comparison with other criteria. Hiroki Tsurumi and Hajime Wago **48** (1991) 215–240
Mean-standard deviation frontiers * Using conditional moments of asset payoffs to infer the volatility of intertemporal marginal rates of substitution. A. Ronald Gallant, Lars Peter Hansen, and George Tauchen **45** (1990) 141–179
Mean tests * An encompassing approach to conditional ___ with applications to testing nonnested hypotheses. Jeffrey M. Wooldridge **45** (1990) 331–350
Mean-variance equality * Regression-based tests for overdispersion in the Poisson model. A. Colin Cameron and Pravin K. Trivedi **46** (1990) 347–364
Means
An adaptive empirical Bayes estimator of the multivariate normal ___ under quadratic loss. G.G. Judge, R. Carter Hill, and M.E. Bock **44** (1990) 189–213
On the application of robust, regression-based diagnostics to models of conditional ___ and conditional variances. Jeffrey M. Wooldridge **47** (1991) 5–46
Measurement * The ___ of productivity and scarcity rents: The case of asbestos in Canada. Pierre Lasserre and Pierre Ouellette **48** (1991) 287–312
Measurement error
Grouped-data estimation and testing in simple labor-supply models. Joshua D. Angrist **47** (1991) 243–266
Identification and estimation of polynomial errors-in-variables models. Jerry A. Hausman, Whitney K. Newey, Hidehiko Ichimura, and James L. Powell **50** (1991) 273–295
Inequality at birth: The scope for policy intervention. Mark R. Rosenzweig and Kenneth I. Wolpin **50** (1991) 205–228
The reserve-labor hypothesis, short-run pricing theories, and the employment-output relationship. Steven Garber **42** (1989) 219–245
Measurement error correction procedures * Residual risk revisited. Bruce N. Lehmann **45** (1990) 71–97

Measurement issues * Statistical and ___ in assessing the welfare status of aged individuals and populations. Kenneth G. Manton, Max A. Woodbury, and Eric Stallard **50** (1991) 151–181
Measurement of economic capacity utilization * On the ___ for multiproduct industries. Kathleen Segerson and Dale Squires **44** (1990) 347–361
Measurement of productivity * Demand conditions, regulation, and the ___. Elie Appelbaum and Joseph Berechman **47** (1991) 379–400
Measurement of welfare * On the ___. Jan Tinbergen **50** (1991) 7–13
Measures of income inequality * Interpreting the magnitude of changes in ___. McKinley L. Blackburn **42** (1989) 21–25
Measures of multivariate inequality * Continuously distributed attributes and measures of multivariate inequality. Esfandiar Maasoumi **42** (1989) 131–144
Measuring cost efficiency in banking: Econometric and linear programming evidence. Gary D. Ferrier and C.A. Knox Lovell **46** (1990) 229–245
Method of moments
A gamma-distributed stochastic frontier model. William H. Greene **46** (1990) 141–163
Grouped-data estimation and testing in simple labor-supply models. Joshua D. Angrist **47** (1991) 243–266
Residual risk revisited. Bruce N. Lehmann **45** (1990) 71–97
Testing nonnested Euler conditions with quadrature-based methods of approximation. Eric Ghysels and Alastair Hall **46** (1990) 273–308
Method of moments estimation
Moment-based estimation and testing of stochastic frontier models. Raymond J. Kopp and John Mullahy **46** (1990) 165–183
Three-stage least squares with different instruments for different equations. Peter Schmidt **43** (1990) 389–394
Methodological issues in the estimation of the size distribution of household wealth. Edward N. Wolff **43** (1990) 179–195
Methods of approximation * Testing nonnested Euler conditions with quadrature-based ___. Eric Ghysels and Alastair Hall **46** (1990) 273–308
Michigan panel data on income dynamics * Generalized entropy measures of mobility for different sexes and income levels. Esfandiar Maasoumi and Sourushe Zandvakili **43** (1990) 121–133
Micro-data
Optimal grouping of income and wealth data. J.B. Davies and A.F. Shorrocks **42** (1989) 97–108
Sampling variance and decomposable inequality measures. Frank A. Cowell **42** (1989) 27–41
Statistical properties of measures of between-group income differentials. Joseph L. Gastwirth and Tapan K. Nayak **42** (1989) 5–19
The information content of equivalence scales. Richard Blundell and Arthur Lewbel **50** (1991) 49–68
Minimum distance estimators
Consistent estimation for some nonlinear errors-in-variables models. Cheng Hsiao **41** (1989) 159–185
On the efficient estimation of simultaneous equations with covariance restrictions. Manuel Arellano **42** (1989) 247–265
Simultaneous equations with covariance restrictions. Thomas J. Rothenberg and Paul A. Ruud **44** (1990) 25–39
Minimum distance risk premium estimators * Residual risk revisited. Bruce N. Lehmann **45** (1990) 71–97
Minnesota Work Equity Project * Induced work participation and the returns to experience for welfare women: Evidence from a social experiment. Dan Steinberg **41** (1989) 321–340
Missing-data problems * Extensions of estimation methods using the EM algorithm. Paul A. Ruud **49** (1991) 305–341

Misspecification
An encompassing approach to conditional mean tests with applications to testing nonnested hypotheses. Jeffrey M. Wooldrige **45** (1990) 331–350
Asymptotic relative efficiency of the classical test statistics under ___. Pentti Saikkonen **42** (1989) 351–369
How to live with ___ if you must. Esfandiar Maasoumi **44** (1990) 67–86
Multi-step estimation and forecasting in dynamic models. Andrew A. Weiss **48** (1991) 135–149
The implications of periodically varying coefficients for seasonal time-series processes. Denise R. Osborn **48** (1991) 373–384
Specification testing and quasi-maximum-likelihood estimation. Jeffrey M. Wooldridge **48** (1991) 29–55
Mixed integer linear program * Largest size-efficient scale and size efficiencies of decision-making units in data envelopment analysis. Ajay Maindiratta **46** (1990) 57–72
Mobility * Generalized entropy measures of ___ for different sexes and income levels. Esfandiar Maasoumi and Sourushe Zandvakili **43** (1990) 121–133
Mode regression. Myoung-jae Lee **42** (1989) 337–349
Model construction * A method for approximate representation of vector-valued time series and its relation to two alternatives. Masanao Aoki and Arthur Havenner **42** (1989) 181–199
Model orientation * Recent developments in DEA: The mathematical programming approach to frontier analysis. Lawrence M. Seiford and Robert M. Thrall **46** (1990) 7–38
Model probability * A Bayesian approach to regression selection and estimation, with application to a price index for radio services. Brent R. Moulton **49** (1991) 169–193
Model selection
Asymptotic optimality of generalized C(L), cross-validation, and generalized cross-validation in regression with heteroskedastic errors. Donald W.K. Andrews **47** (1991) 359–377
Mallows' C(p) criterion and unbiasedness of ___. Masahito Kobayashi and Shinichi Sakata **45** (1990) 385–395
Mean squared errors of forecast for selecting nonnested linear models and comparison with other criteria. Hiroki Tsurumi and Hajime Wago **48** (1991) 215–240
Parametrization of factor analysis models. Giorgio Picci **41** (1989) 17–38
The likelihood dominance criterion: A new approach to ___. Robert A. Pollak and Terence J. Wales **47** (1991) 227–242
Modeling financial data * On the relation between GARCH and stable processes. Casper G. de Vries **48** (1991) 313–324
Modeling poverty * The poverty concept when prices are income-dependent. Bernard M.S. van Praag and Michael R. Baye **43** (1990) 153–166
Models of conditional means * On the application of robust, regression-based diagnostics to ___ and conditional variances. Jeffrey M. Wooldridge **47** (1991) 5–46
Modified approximate estimator * A note on Park and Heikes' (1983) ___ for the first-order moving-average process. Askar H. Choudhury and Robert D. St. Louis **46** (1990) 399–406
Moment-based estimation and testing of stochastic frontier models. Raymond J. Kopp and John Mullahy **46** (1990) 165–183
Moment-based specification tests * Regression-based tests for overdispersion in the Poisson model. A. Colin Cameron and Pravin K. Trivedi **46** (1990) 347–364
Moment functions * On a pooled estimator and its finite-sample moments. William M. Mikhail and G.A. Ghazal **48** (1991) 195–214

Moments
A note on the existence of ___ of k-class estimators when k is negative. Terrence Kinal **48** (1991) 409–410
Bounds for exact ___ of estimators in the errors-in-variables model and simultaneous equations. Ralph Friedmann **45** (1990) 367–384
Using incomplete ___ to measure inequality. Richard J. Butler and James B. McDonald **42** (1989) 109–119
Moments of measurement error * Identification and estimation of polynomial errors-in-variables models. Jerry A. Hausman, Whitney K. Newey, Hidehiko Ichimura, and James L. Powell **50** (1991) 273–295
Monetary economics * A dispersion-dependency diagnostic test for aggregation error: With applications to ___ and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34
Money demand equation * Bayesian multivariate exogeneity analysis: An application to a UK ___. Mark F.J. Steel and Jean-Francois Richard **49** (1991) 239–274
Money illusion * Income distribution movements and aggregate ___. Arthur Lewbel **43** (1990) 35–42
Money-income causality * Estimating integrated higher-order continuous time autoregressions with an application to ___. A.C. Harvey and James H. Stock **42** (1989) 319–336
Money-output causality * The impact of stochastic and deterministic trends on ___: A multi-country investigation. Robert Krol and Lee E. Ohanian **45** (1990) 291–308
Monte Carlo comparison * Estimation of a linear regression model with stationary ARMA(p, q) errors. Victoria Zinde-Walsh and John W. Galbraith **47** (1991) 333–357
Monte Carlo experiment(s)
An adaptive empirical Bayes estimator of the multivariate normal mean under quadratic loss. G.G. Judge, R. Carter Hill, and M.E. Bock **44** (1990) 189–213
Bounded-influence estimators for the SURE model. Franco Peracchi **48** (1991) 119–134
Least absolute error estimation in the presence of serial correlation. Andrew A. Weiss **44** (1990) 127–158
Mallows' C(p) criterion and unbiasedness of model selection. Masahito Kobaysahi and Shinichi Sakata **45** (1990) 385–395
Multi-step estimation and forecasting in dynamic models. Andrew A. Weiss **48** (1991) 135–149
Nonparametric hazard estimation with time-varying discrete covariates. Siu Fai Leung and Wing Hung Wong **45** (1990) 309–330
On estimating and testing in a linear regression model with autocorrelated errors. Kazuhiro Ohtani **44** (1990) 333–346
Price elasticities from survey data: Extensions and Indonesian results. Angus Deaton **44** (1990) 281–309
Seasonal integration and cointegration. S. Hylleberg, R.F. Engle, C.W.J. Granger, and B.S. Yoo **44** (1990) 215–238
The small-sample performance of the information-matrix test. Chris Orme **46** (1990) 309–331
Two-stage instrumental variable estimators for the nonlinear errors-in-variables model. Yasuo Amemiya **44** (1990) 311–332
Monte Carlo integration
A Bayesian analysis of simultaneous equation models by combining recursive analytical and numerical approaches. Mark F.J. Steel **48** (1991) 83–117
Cointegration tests in present value relationships: A Bayesian look at the bivariate properties of stock prices and dividends. Gary Koop **49** (1991) 105–139

Seminonparametric Bayesian estimation of the asymptotically ideal production model. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
Monte Carlo investigation * Regression-based tests for overdispersion in the Poisson model. A. Colin Cameron and Pravin K. Trivedi **46** (1990) 347–364
Monte Carlo simulations * How to live with misspecification if you must. Esfandiar Maasoumi **44** (1990) 67–86
Monte Carlo study
Asymptotic normality and consistency of semi-nonparametric regression estimators using an upwards F test truncation rule. Brian J. Eastwood **48** (1991) 151–181
Bootstrapping improved estimators for linear regression models. David Brownstone **44** (1990) 171–187
Fighting the teflon factor: Comparing classical and Bayesian estimators for autocorrelated errors. Peter Kennedy and Daniel Simons **48** (1991) 15–27
Mode regression. Myoung-jai Lee **42** (1989) 337–349
Robust estimation based on grouped-adjusted data in linear regression models. Kazumitsu Nawata **43** (1990) 317–336
Testing for unit roots in autoregressive moving average models: An instrumental variable approach. Sastry G. Pantula and Alastair Hall **48** (1991) 325–353
The Durbin-Watson ratio under infinite-variance errors. Peter C.B. Phillips and Mico Loretan **47** (1991) 85–114
Mortality inequalities * Black-white ___. Jere R. Behrman, Robin Sickles, Paul Taubman, and Abdo Yazbeck **50** (1991) 183–203
Moving average models
Testing for unit roots in autoregressive ___: An instrumental variable approach. Sastry G. Pantula and Alastair Hall **48** (1991) 325–353
Unit-roots tests for time-series data with a linear time trend. Said E. Said **47** (1991) 285–303
Moving average process * A note on Park and Heikes' (1983) modified approximate estimator for the first-order ___. Askar H. Choudhury and Robert D. St. Louis **46** (1990) 399–406
Moving average representation * A note on the asymptotic distribution of impulse response functions of estimated VAR models with orthogonal residuals. Helmut Lutkepohl **42** (1989) 371–376
Multiattribute welfare measures
Cluster analysis for measuring welfare and quality of life across countries. Joseph G. Hirschberg, Esfandiar Maasoumi, and Daniel J. Slottje **50** (1991) 131–150
Statistical and measurement issues in assessing the welfare status of aged individuals and populations. Kenneth G. Manton, Max A. Woodbury, and Eric Stallard **50** (1991) 151–181
Multicategory data * A note concerning specifications of interactive random-coefficient regression models. Joseph P. Gatto, Harry H. Kelejian, and Scott W. Stephan **47** (1991) 273–284
Multicollinearity * Residual risk revisited. Bruce N. Lehmann **45** (1990) 71–97
Multicountry investigation * The impact of stochastic and deterministic trends on money-output causality: A ___. Robert Krol and Lee E. Ohanian **45** (1990) 291–308
Multidimensional analysis
Generalized entropy measures of mobility for different sexes and income levels. Esfandiar Maasoumi and Sourushe Zandvakili . . . **43** (1990) 121–133
Inequality and the standard of living. Dale W. Jorgenson and Daniel T. Slesnick **43** (1990) 103–120
On the relationship between income inequality measures and social welfare functions. Camilo Dagum **43** (1990) 91–102

Multidimensional Monte Carlo integration * Cointegration tests in present value relationships: A Bayesian look at the bivariate properties of stock prices and dividends. Gary Koop **49** (1991) 105–139
Multifactor productivity * The measurement of productivity and scarcity rents: The case of asbestos in Canada. Pierre Lasserre and Pierre Ouellette **48** (1991) 287–312
Multinomial logit model
On the compatibility of nested logit models with utility maximization. Axel Borsch-Supan **43** (1990) 373–388
Pooling states in the ___. J.S. Cramer and G. Ridder **47** (1991) 267–272
Multinomial probability model * A ___ of size income distribution. Charles A. Diamond, Curtis J. Simon, and John T. Warner **43** (1990) 43–61
Multiperiod mean-square forecast error * The exact ___ for the first-order autoregressive model with an intercept. Jan R. Magnus and Bahram Pesaran **42** (1989) 157–179
Multiple diagnostic procedures * On ___ for the linear model. Grant H. Hillier **47** (1991) 47–66
Multiple diagnostic testing * On the application of robust, regression-based diagnostics to models of conditional means and conditional variances. Jeffrey M. Wooldridge **47** (1991) 5–46
Multiple outliers * Detecting ___ with an application to R&D productivity. Peter C. Reiss **43** (1990) 293–315
Multiple regression * Testing for strong serial correlation and dynamic conditional heteroskedasticity in ___. P.M. Robinson **47** (1991) 67–84
Multiple roots of the Tobit log-likelihood. William Greene **46** (1990) 365–380
Multiplicative models * Bootstrapping in ___. M.S. Srivastava and Balvir Singh **42** (1989) 287–297
Multiplier bounds * The role of ___ in efficiency analysis with application to Kansas farming. Russell G. Thompson, Larry N. Langemeier, Chih-Tah Lee, Euntaik Lee, and Robert M. Thrall **46** (1990) 93–108
Multiplier tests
Classical tests for contemporaneously uncorrelated disturbances in the linear simultaneous equations model. Darrell A. Turkington **42** (1989) 299–317
Testing for strong serial correlation and dynamic conditional heteroskedasticity in multiple regression. P.M. Robinson **47** (1991) 67–84
Multiproduct industries * On the measurement of economic capacity utilization for ___. Kathleen Segerson and Dale Squires **44** (1990) 347–361
Multistep estimation and forecasting in dynamic models. Andrew A. Weiss **48** (1991) 135–149
Multivariate analysis * Elliptical ___. Bernard M.S. van Praag and Bertram M. Wesselman **41** (1989) 189–203
Multivariate exogeneity analysis * Bayesian ___: An application to a UK money demand equation. Mark F.J. Steel and Jean-Francois Richard **49** (1991) 239–274
Multivariate inequality * Continuously distributed attributes and measures of ___. Esfandiar Maasoumi **42** (1989) 131–144
Multivariate inequality constraint test * Testing inequality constraints in inear econometric models. Frank A. Wolak **41** (1989) 205–235
Multivariate log-normal distribution * Continuously distributed attributes and measures of multivariate inequality. Esfandiar Maasoumi **42** (1989) 131–144
Multivariate methods * Estimation and testing when explanatory variables are endogenous: An application to a demand system. C.L.F. Attfield **48** (1991) 395–408
Multivariate models * Estimating integrated higher-order continuous time autoregressions with an application to money-income causality. A.C. Harvey and James H. Stock **42** (1989) 319–336

Multivariate normal distributions * A note on Bayesian inference in a regression model with elliptical errors. Jacek Osiewalski **48** (1991) 183–193
Multivariate normal means * An adaptive empirical Bayes estimator of the ___ under quadratic loss. G.G. Judge, R. Carter Hill, and M.E. Bock **44** (1990) 189–213
Multivariate regression * On the efficient estimation of simultaneous equations with covariance restrictions. Manuel Arellano **42** (1989) 247–265
Multivariate regression framework * A Bayesian approach to testing the arbitrage pricing theory. Robert McCulloch and Peter E. Rossi **49** (1991) 141–168
Multivariate Student-t regression disturbances * Pre-testing for linear restrictions in a regression model with spherically symmetric disturbances. Judith A. Giles **50** (1991) 377–398
Multivariate time series * A method for approximate representation of vector-valued time series and its relation to two alternatives. Masanao Aoki and Arthur Havenner **42** (1989) 181–199

Neoclassical and behavioral pricing model * The reserve-labor hypothesis, short-run pricing theories, and the employment-output relationship. Steven Garber **42** (1989) 219–245
Nested logit models * On the compatibility of ___ with utility maximization. Axel Borsch-Supan **43** (1990) 373–388
New England fishing industry * On the measurement of economic capacity utilization for multi-product industries. Kathleen Segerson and Dale Squires **44** (1990) 347–361
Noise components * Linear dynamic errors-in-variables models: Some structure theory. M. Deistler and B.D.O. Anderson **41** (1989) 39–63
Noise covariances * Parametrization of factor analysis models. Giorgio Picci **41** (1989) 17–38
Noise spectral density * Linear dynamic errors-in-variables models: Some structure theory. M. Deistler and B.D.O. Anderson **41** (1989) 39–63
Nonconstant returns to scale * Seminonparametric Bayesian estimation of the asymptotically ideal production model. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
Nonlinear errors-in-variables models
Consistent estimation for some ___. Cheng Hsiao **41** (1989) 159–185
Two-stage instrumental variable estimators for the ___. Yasuo Amemiya **44** (1990) 311–332
Nonlinear least-squares estimators * An encompassing approach to conditional mean tests with applications to testing nonnested hypotheses. Jeffrey M. Wooldridge **45** (1990) 331–350
Nonlinear two-stage least-squares estimator * A note on the application of the ___ to a Box-Cox transformed model. J. Daniel Khazzoom . . **42** (1989) 377–379
Nonnegativity constraints * Coherency of the indirect translog demand system with binding ___. Arthur van Soest and Peter Kooreman . . . **44** (1990) 391–400
Nonnested Euler conditions * Testing ___ with quadrature-based methods of approximation. Eric Ghysels and Alastair Hall **46** (1990) 273–308
Nonnested hypotheses
An encompassing approach to conditional mean tests with applications to testing ___. Jeffrey M. Wooldridge **45** (1990) 331–350
The likelihood dominance criterion: A new approach to model selection. Robert A. Pollak and Terence J. Wales **47** (1991) 227–242
Nonnested linear models * Mean squared errors of forecast for selecting ___ and comparison with other criteria. Hiroki Tsurumi and Hajime Wago **48** (1991) 215–240
Nonorthogonality * Effects of collinearity on information about regression coefficients. Ehsan S. Soofi **43** (1990) 255–274

Nonparametric approaches * Frontier analysis: Parametric and ___. Edited by Arie Y. Lewin and C.A. Knox Lovell. Annals 1990-4 .... **46** (1990) 1–245
Nonparametric baseline hazard function * Personal characteristics, unemployment insurance, and the duration of unemployment. Dean A. Follmann, Matthew S. Goldberg, and Laurie May **45** (1990) 351–366
Nonparametric estimation * Deterministic parametric and ___ of efficiency in service production: A comparison. Hans Bjurek, Lennart Hjalmarsson, and Finn R. Forsund **46** (1990) 213–227
Nonparametric hazard estimation with time-varying discrete covariates. Siu Fai Leung and Wing Hung Wong **45** (1990) 309–330
Nonparametric tests * Goodness-of-fit in optimizing models. Hal R. Varian **46** (1990) 125–140
Nonstationary AR(1) errors * Optimal invariant tests for the autocorrelation coefficient in linear regressions with stationary or ___. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
Nonsymmetric dynamic factor demand models * A note on the estimation of ___. Dilip B. Madan and Ingmar R. Prucha **42** (1989) 275–283
Nonsynchronous trading * An econometric analysis of ___. Andrew W. Lo and A. Craig MacKinlay **45** (1990) 181–211
Normal mean model * A posterior odds analysis of the weekend effect. Robert A. Connolly **49** (1991) 51–104
Normal means * An adaptive empirical Bayes estimator of the multivariate ___ under quadratic loss. G.G. Judge, R. Carter Hill, and M.E. Bock **44** (1990) 189–213
Normality
Asymptotic ___ and consistency of semi-nonparametric regression estimators using an upwards F test truncation rule. Brian J. Eastwood **48** (1991) 151–181
Consistent estimation for some nonlinear errors-in-variables models. Cheng Hsiao **41** (1989) 159–185
On the asymptotic ___ of Fourier flexible form estimates. A. Ronald Gallant and Geraldo Souza **50** (1991) 329–353
Normalized incomplete moments * Using incomplete moments to measure inequality. Richard J. Butler and James B. McDonald **42** (1989) 109–119
Normative index numbers. Daniel T. Slesnick **50** (1991) 107–130
Nuclear reactors * Risk and reactor safety systems adoption. Jeffrey A. Dubin and Geoffrey S. Rothwell **42** (1989) 201–218
Nuisance parameters * Forecasting turning points in international output growth rates using Bayesian exponentially weighted autoregression, time-varying parameter, and pooling techniques. Arnold Zellner, Chansik Hong, and Chung-ki Min **49** (1991) 275–304
Numerical approaches * A Bayesian analysis of simultaneous equation models by combining recursive analytical and ___. Mark F.J. Steel **48** (1991) 83–117
Numerical methods approach * A ___ to calculating cost-of-living indices. Susan Porter-Hudak and Kathy Hayes **50** (1991) 91–105

Objective function * Goodness-of-fit in optimizing models. Hal R. Varian **46** (1990) 125–140
Observed data
Consistent estimation for some nonlinear errors-in-variables models. Cheng Hsiao **41** (1989) 159–185
The simultaneous-equations model revisited: Statistical adequacy and identification. Aris Spanos **44** (1990) 87–105
Odds analysis * A posterior ___ of the weekend effect. Robert A. Connolly **49** (1991) 51–104

Odds ratio analysis * A Bayesian approach to testing the arbitrage pricing theory. Robert McCulloch and Peter E. Rossi **49** (1991) 141–168
Optimal control solution * A note on the estimation of nonsymmetric dynamic factor demand models. Dilip B. Madan and Ingmar R. Prucha **42** (1989) 275–283
Optimal grouping of income and wealth data. J.B. Davies and A.F. Shorrocks **42** (1989) 97–108
Optimal invariant tests for the autocorrelation coefficient in linear regressions with stationary or nonstationary AR(1) errors. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
Optimal minimum distance estimator
An efficient GLS estimator of triangular models with covariance restrictions. Manuel Arellano **42** (1989) 267–273
On the efficient estimation of simultaneous equations with covariance restrictions. Manuel Arellano **42** (1989) 247–265
Optimal rotation design * The efficiency of rotating-panel designs in an analysis-of-variance model. Theo Nijman, Marno Verbeek, and Arthur van Soest **49** (1991) 373–399
Optimality measures * A method for approximate representation of vector-valued time series and its relation to two alternatives. Masanao Aoki and Arthur Havenner **42** (1989) 181–199
Optimality of generalized C(L) * Asymptotic ___ , cross-validation, and generalized cross-validation in regression with heteroskedastic errors. Donald W.K. Andrews **47** (1991) 359–377
Optimizing models * Goodness-of-fit in ___. Hal R. Varian **46** (1990) 125–140
Option pricing models * Pricing foreign currency options with stochastic volatility. Angelo Melino and Stuart M. Turnbull **45** (1990) 239–265
Ordinal and cardinal utility: An integration of the two dimensions of the welfare concept. Bernard M.S. van Praag **50** (1991) 69–89
Ordinary least squares * Reasonable extreme-bounds analysis. Clive W.J. Granger and Harald F. Uhlig **44** (1990) 159–170
Orthogonal residuals * A note on the asymptotic distribution of impulse response functions of estimated VAR models with ___. Helmut Lutkepohl **42** (1989) 371–376
Orthogonality tests * A unified approach to estimation and ___ in linear single-equation econometric models. M. Hashem Pesaran and Richard J. Smith **44** (1990) 41–66
Outliers * Detecting multiple ___ with an application to R&D productivity. Peter C. Reiss **43** (1990) 293–315
Output growth rates, international * Forecasting turning points in international output growth rates using Bayesian exponentially weighted autoregression, time-varying parameter, and pooling techniques. Arnold Zellner, Chansik Hong, and Chung-ki Min **49** (1991) 275–304
Overdispersion * Regression-based tests for ___ in the Poisson model. A. Colin Cameron and Pravin K. Trivedi **46** (1990) 347–364
Overidentification test statistic * Grouped-data estimation and testing in simple labor-supply models. Joshua D. Angrist **47** (1991) 243–266
Own- and cross-price elasticities * Price elasticities from survey data: Extensions and Indonesian results. Angus Deaton **44** (1990) 281–309

Panel data
Estimation of the error-components model with incomplete panels. Tom Wansbeek and Arie Kapteyn **41** (1989) 341–361
Production frontiers, ___ , and time-varying technical inefficiency. Subal C. Kumbhakar **46** (1990) 201–211

Production frontiers with cross-sectional and time-series variation in efficiency levels. Christopher Cornwell, Peter Schmidt, and Robin C. Sickles **46** (1990) 185–200

Panel designs * The efficiency of rotating-___ in an analysis-of-variance model. Theo Nijman, Marno Verbeek, and Arthur van Soest **49** (1991) 373–399

Panels * Estimation of time-dependent parameters in linear models using cross-sections, ___, or both. Theo Nijman and Marno Verbeek **46** (1990) 333–346

Panels, incomplete * Estimation of the error-components model with incomplete panels. Tom Wansbeek and Arie Kapteyn **41** (1989) 341–361

Panel survey of income dynamics * Grouped-data estimation and testing in simple labor-supply models. Joshua D. Angrist **47** (1991) 243–266

Parameters, time-dependent * Estimation of time-dependent parameters in linear models using cross-sections, panels, or both. Theo Nijman and Marno Verbeek **46** (1990) 333–346

Parametric and nonparametric approaches * Frontier analysis: ___. Edited by Arie Y. Lewin and C.A. Knox Lovell. Annals 1990-4 . . . . **46** (1990) 1–245

Parametric and nonparametric estimation * Deterministic ___ of efficiency in service production: A comparison. Hans Bjurek, Lennart Hjalmarsson, and Finn R. Forsund **46** (1990) 213–227

Parametric and semi-parametric estimators * Bounded-influence estimators for the Tobit model. Franco Peracchi **44** (1990) 107–126

Parametric methods * Goodness-of-fit in optimizing models. Hal R. Varian **46** (1990) 125–140

Parametric production functions * Production frontiers, panel data, and time-varying technical inefficiency. Subal C. Kumbhakar **46** (1990) 201–211

Parametric transformations * Transformations in stochastic DEA models. Jati K. Sengupta **46** (1990) 109–123

Parametrization of factor analysis models. Giorgio Picci **41** (1989) 17–38

Park and Heikes' (1983) modified approximate estimator * A note on ___ for the first-order moving-average process. Askar H. Choudhury and Robert D. St. Louis **46** (1990) 399–406

Partial likelihood estimator * Asymptotic efficiency calculations of the ___. Aaron K. Han **41** (1989) 237–250

Period processes * The implications of periodically varying coefficients for seasonal time-series processes. Denise R. Osborn **48** (1991) 373–384

Personal characteristics, unemployment insurance, and the duration of unemployment. Dean A. Follmann, Matthew S. Goldberg, and Laurie May **45** (1990) 351–366

Phase-averaging procedures * An analogue model of ___. Julia Campos, Neil R. Ericsson, and David F. Hendry **43** (1990) 275–292

Point-optimal invariant tests

Optimal invariant tests for the autocorrelation coefficient in linear regressions with stationary or nonstationary AR(1) errors. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143

Testing for fourth-order autocorrelation in regression disturbances when first-order autocorrelation is present. Maxwell L. King **41** (1989) 285–301

Poisson model * Regression-based tests for overdispersion in the ___. A. Colin Cameron and Pravin K. Trivedi **46** (1990) 347–364

Political-business cycle implications of War on Poverty * An intervention analysis of the War on Poverty: Poverty's persistence and political-business cycle implications. Thomas B. Fomby and Kathy J. Hayes **43** (1990) 197–212

Polyhedral cone-ratio DEA models with an illustrative application to large commercial banks. A. Charnes, W.W. Cooper, Z.M. Huang, and D.B. Sun **46** (1990) 73–91

Polynomial errors-in-variables models * Identification and estimation of ___. Jerry A. Hausman, Whitney K. Newey, Hidehiko Ichimura, and James L. Powell **50** (1991) 273–295
Poly-t based models * A Bayesian analysis of simultaneous equation models by combining recursive analytical and numerical approaches. Mark F.J. Steel **48** (1991) 83–117
Pooled estimator * On a ___ and its finite-sample moments. William M. Mikhail and G.A. Ghazal **48** (1991) 195–214
Pooling states in the multinominal logit model. J.S. Cramer and G. Ridder **47** (1991) 267–272
Pooling techniques * Forecasting turning points in international output growth rates using Bayesian exponentially weighted autoregression, time-varying parameter, and ___. Arnold Zellner, Chansik Hong, and Chung-ki Min **49** (1991) 275–304
Population survey, current
A multinomial probability model of size income distribution. Charles A. Diamond, Curtis J. Simon, and John T. Warner **43** (1990) 43–61
Methodological issues in the estimation of the size distribution of household wealth. Edward N. Wolff **43** (1990) 179–195
Remembrance of things past the distribution of earnings across occupations and the kappa criterion. Joseph G. Hirschberg and D.J. Slottje **42** (1989) 121–130
Statistical properties of measures of between-group income differentials. Joseph L. Gastwirth and Tapan K. Nayak **42** (1989) 5–19
Positive random variables * Regression models for ___. James B. McDonald and Richard J. Butler **43** (1990) 227–251
Posterior model probabilities * A Bayesian approach to testing the arbitrage pricing theory. Robert McCulloch and Peter E. Rossi **49** (1991) 141–168
Posterior odds
A Bayesian approach to regression selection and estimation, with application to a price index for radio services. Brent R. Moulton **49** (1991) 169–193
A Bayesian approach to testing the arbitrage pricing theory. Robert McCulloch and Peter E. Rossi **49** (1991) 141–168
A Bayesian analysis of the unit root in real exchange rates. Peter Schotman and Herman K. van Dijk **49** (1991) 195–238
Posterior odds analysis * A ___ of the weekend effect. Robert A. Connolly **49** (1991) 51–104
Poverty * The ___ concept when prices are income-dependent. Bernard M.S. van Praag and Michael R. Baye **43** (1990) 153–166
Poverty, War on * An intervention analysis of the War on Poverty: Poverty's persistence and political-business cycle implications. Thomas B. Fomby and Kathy J. Hayes **43** (1990) 197–212
Power
Finite sample ___ of linear regression autocorrelation tests. Walter Kramer and Helmut Zeisel **43** (1990) 363–372
Limiting ___ of unit-root tests in time-series regression. Seiji Nabeya and Katsuto Tanaka **46** (1990) 247–271
Power and robustness of jackknife and likelihood-ratio tests for grouped heteroscedasticity. Subhash C. Sharma and Carmelo Giaccotto **49** (1991) 343–372
Power characteristics * A unified approach to estimation and orthogonality tests in linear single-equation econometric models. M. Hashem Pesaran and Richard J. Smith **44** (1990) 41
Power
Power comparisons
Finite sample power of linear regression autocorrelation tests. Walter Kramer and Helmut Zeisel **43** (1990) 363–372

Optimal invariant tests for the autocorrelation coefficient in linear regressions with stationary or nonstationary AR(1) errors. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
Testing for fourth-order autocorrelation in regression disturbances when first-order autocorrelation is present. Maxwell L. King **41** (1989) 285–301
Power properties • Unit-roots tests for time-series data with a linear time trend. Said E. Said **47** (1991) 285–303
Predicting expected loss • A statistical perspective on insurance rate-making. Cheng Hsiao, Changseob Kim, and Grant Taylor **44** (1990) 5–24
Prediction
A note on Bayesian inference in a regression model with elliptical errors. Jacek Osiewalski **48** (1991) 183–193
Forecasting with demand systems: A comparative study. Marcus J. Chambers **44** (1990) 363–376
Pre-testing for linear restrictions in a regression model with spherically symmetric disturbances. Judith A. Giles **50** (1991) 377–398
Preference(s)
The information content of equivalence scales. Richard Blundell and Arthur Lewbel **50** (1991) 49–68
Welfare comparisons and situation comparisons. Robert A. Pollak . . **50** (1991) 31–48
Welfare, ___ and freedom. Amartya Sen **50** (1991) 15–29
Present value relationships • Cointegration tests in ___: A Bayesian look at the bivariate properties of stock prices and dividends. Gary Koop **49** (1991) 105–139
Pretest estimator
Bootstrapping improved estimators for linear regression models. David Brownstone **44** (1990) 171–187
Some risk results for a two-stage ___ in the case of possible heteroskedasticity. Ahmet Ozcam and George G. Judge **48** (1991) 355–371
Pretesting for linear restrictions in a regression model with spherically symmetric disturbances. Judith A. Giles **50** (1991) 377–398
Price-adjustment information • Estimating disequilibrium models with limited a priori ___. Walter J. Mayer **41** (1989) 303–320
Price-dependent inequality measures • Inflation, relative price variation, and inequality. Daniel T. Slesnick **43** (1990) 135–151
Price elasticities from survey data: Extensions and Indonesian results. Angus Deaton **44** (1990) 281–309
Price index for radio services • A Bayesian approach to regression selection and estimation, with application to a ___. Brent R. Moulton **49** (1991) 169–193
Price variation • Inflation, relative ___, and inequality. Daniel T. Slesnick **43** (1990) 135–151
Pricing • Intertemporal asset ___: An empirical investigation. Jay Shanken **44** (1990) 99–120
Pricing foreign currency options with stochastic volatility. Angelo Melino and Stuart M. Turnbull **45** (1990) 239–265
Pricing models • Are consumption-based intertemporal capital asset ___ structural? Eric Ghysels and Alastair Hall **45** (1990) 121–139
Pricing of Treasury bills • Asset pricing with a FACTOR-ARCH covariance structure: Empirical estimates for Treasury bills. Robert F. Engle, Victor K. Ng, and Michael Rothschild **45** (1990) 213–237
Pricing theories • The reserve-labor hypothesis, short-run ___ , and the employment-output relationship. Steven Garber **42** (1989) 219–245
Primary metals industry, U.S. • Modeling stochastic and cyclical components of technical change: An application of the Kalman filter. Margaret E. Slade **41** (1989) 363–383

Principal components pretest estimator * Bootstrapping improved estimators for linear regression models. David Brownstone **44** (1990) 171–187
Principal components technique * A Bayesian approach to testing the arbitrage pricing theory. Robert McCulloch and Peter E. Rossi **49** (1991) 141–168
Prior distribution, recursive extended natural conjugate * Bayesian multivariate exogeneity analysis: An application to a U.K. money demand equation. Mark F.J. Steel and Jean-Francois Richard **49** (1991) 239–274
Prior information
An adaptive empirical Bayes estimator of the multivariate normal mean under quadratic loss. G.G. Judge, R. Carter Hill, and M.E. Bock **44** (1990) 189–213
Cointegration tests in present value relationships: A Bayesian look at the bivariate properties of stock prices and dividends. Gary Koop **49** (1991) 105–139
Prior sensitivity analysis * A Bayesian approach to testing the arbitrage pricing theory. Robert McCulloch and Peter E. Rossi **49** (1991) 141–168
Probability model * A multinomial ___ of size income distribution. Charles A. Diamond, Curtis J. Simon, and John T. Warner **43** (1990) 43–61
Production * Deterministic parametric and nonparametric estimation of efficiency in service ___: A comparison. Hans Bjurek, Lennart Hjalmarsson, and Finn R. Forsund **46** (1990) 213–227
Production analysis * Goodness-of-fit in optimizing models. Hal R. Varian **46** (1990) 125–140
Production economies and efficiencies * Measuring cost efficiency in banking: Econometric and linear programming evidence. Gary D. Ferrier and C.A. Knox Lovell **46** (1990) 229–245
Production frontier(s)
Measuring cost efficiency in banking: Econometric and linear programming evidence. Gary D. Ferrier and C.A. Knox Lovell **46** (1990) 229–245
Transformations in stochastic DEA models. Jati K. Sengupta **46** (1990) 109–123
Largest size-efficient scale and size efficiencies of decision-making units in data envelopment analysis. Ajay Maindiratta **46** (1990) 57–72
Production frontiers, panel data, and time-varying technical inefficiency. Subal C. Kumbhakar **46** (1990) 201–211
Production frontiers with cross-sectional and time-series variation in efficiency levels. Christopher Cornwell, Peter Schmidt, and Robin C. Sickles **46** (1990) 185–200
Production model * Seminonparametric Bayesian estimation of the asymptotically ideal ___. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
Production possibility set * The role of multiplier bounds in efficiency analysis with application to Kansas farming. Russell G. Thompson, Larry N. Langemeier, Chih-Tah Lee, Euntaik Lee, and Robert M. Thrall **46** (1990) 93–108
Production technology * Recent developments in the econometric estimation of frontiers. Paul W. Bauer **46** (1990) 39–56
Productive efficiency * Deterministic parametric and nonparametric estimation of efficiency in service production: A comparison. Hans Bjurek, Lennart Hjalmarsson, and Finn R. Forsund **46** (1990) 213–227
Productivity
Demand conditions, regulation, and the measurement of ___. Elie Appelbaum and Joseph Berechman **47** (1991) 379–400
Detecting multiple outliers with an application to R&D ___. Peter C. Reiss **43** (1990) 293–315
The measurement of ___ and scarcity rents: The case of asbestos in Canada. Pierre Lasserre and Pierre Ouellette **48** (1991) 287–312

Productivity measurement
Modeling stochastic and cyclical components of technical change: An application of the Kalman filter. Margaret E. Slade **41** (1989) 363–383
Production frontiers with cross-sectional and time-series variation in efficiency levels. Christopher Cornwell, Peter Schmidt, and Robin C. Sickles **46** (1990) 185–200
Proportional hazard specification * Personal characteristics, unemployment insurance, and the duration of unemployment. Dean A. Follmann, Matthew S. Goldberg, and Laurie May **45** (1990) 351–366
Proportional hazards models
Analysis of survival data: Estimation and specification tests using asymptotic least squares. H. Jayet and A. Moreau **48** (1991) 263–285
Asymptotic efficiency calculations of the partial likelihood estimator. Aaron K. Han **41** (1989) 237–250
Black-white mortality inequalities. Jere R. Behrman, Robin Sickles, Paul Taubman, and Abdo Yazbeck **50** (1991) 183–203

Quadratic deterministic frontier production function * Deterministic parametric and nonparametric estimation of efficiency in service production: A comparison. Hans Bjurek, Lennart Hjalmarsson, and Finn R. Forsund **46** (1990) 213–227
Quadratic estimators * Estimation of the error-components model with incomplete panels. Tom Wansbeek and Arie Kapteyn **41** (1989) 341–361
Quadratic loss * An adaptive empirical Bayes estimator of the multivariate normal means under ___. G.G. Judge, R. Carter Hill, and M.E. Bock **44** (1990) 189–213
Quadratic restrictions * On the Wald tests for globally and locally ___. Gordon C.R. Kemp **50** (1991) 257–272
Quadrature-based methods of approximation * Testing nonnested Euler conditions with ___. Eric Ghysels and Alastair Hall **46** (1990) 273–308
Quality of life * Cluster analysis for measuring welfare and ___ across countries. Joseph G. Hirschberg, Esfandiar Maasoumi, and Daniel J. Slottje **50** (1991) 131–150
Quasi-fixed input * An adjustment-costs model of export supply and import demand. Denis Lawrence **46** (1990) 381–398
Quasi-maximum likelihood estimator
On the efficient estimation of simultaneous equations with covariance restrictions. Manuel Arellano **42** (1989) 247–265
Specification testing and ___. Jeffrey M. Wooldridge **48** (1991) 29–55

Racial inequality * Black-white mortality inequalities. Jere R. Behrman, Robin Sickles, Paul Taubman, and Abdo Yazbeck **50** (1991) 183–203
Radio services * A Bayesian approach to regression selection and estimation, with application to a price index for ___. Brent R. Moulton **49** (1991) 169–193
Random censoring * An econometric analysis of nonsynchronous trading. Andrew W. Lo and A. Craig MacKinlay **45** (1990) 181–211
Random coefficient approach * A ___ to the estimation of residential end-use load profiles. Denzil G. Fiebig, Robert Bartels, and Dennis J. Aigner **50** (1991) 297–327
Random-coefficient regression models * A note concerning specifications of interactive ___. Joseph P. Gatto, Harry H. Kelejian, and Scott W. Stephan **47** (1991) 273–284
Random-effects logit model * A ___ of work-welfare transactions. John Enberg, Peter Gottschalk, and Douglas Wolf **43** (1990) 63–75

Random-effects model * Estimation of the error-components model with incomplete panels. Tom Wansbeek and Arie Kapteyn **41** (1989) 341–361
Random variables * Regression models for positive ___. James B. McDonald and Richard J. Butler **43** (1990) 227–251
Random walk * Is size distribution of income a ___? Kathy Hayes, Susan Porter-Hudak, Gerald Scully, and D.J. Slottje **43** (1990) 213–226
Random walk hypothesis
An econometric analysis of nonsynchronous trading. Andrew W. Lo and A. Craig MacKinlay **45** (1990) 181–211
Optimal invariant tests for the autocorrelation coefficient in linear regressions with stationary or nonstationary AR(1) errors. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
Random walk model * A Bayesian analysis of the unit root in real exchange rates. Peter Schotman and Herman K. van Dijk **49** (1991) 195–238
Random walk theory * Spectral based testing of the martingale hypothesis. Steven N. Durlauf **50** (1991) 355–376
Rank conditions
Another look at the identification of current rational-expectations models. Janne Rayner **47** (1991) 305–331
Identification in restricted factor models and the evaluation of ___. Paul A. Bekker **41** (1989) 5–16
Rate-making * A statistical perspective on insurance ___. Cheng Hsiao, Changseob Kim, and Grant Taylor **44** (1990) 5–24
Rates of substitution * Using conditional moments of asset payoffs to infer the volatility of intertemporal marginal ___. A. Ronald Gallant, Lars Peter Hansen, and George Tauchen **45** (1990) 141–179
Ratio method * A Bayesian approach to testing the arbitrage pricing theory. Robert McCulloch and Peter E. Rossi **49** (1991) 141–168
Rational consumer behavior * On the compatibility of nested logit models with utility maximization. Axel Borsch-Supan **43** (1990) 373–388
Rational expectations models
Another look at the identification of current ___. Janne Rayner . . . **47** (1991) 305–331
Recursive solution methods for dynamic linear ___. Mark W. Watson **41** (1989) 65–89
Ray properties * Largest size-efficient scale and size efficiencies of decision-making units in data envelopment analysis. Ajay Maindiratta . . **46** (1990) 57–72
Reactor safety systems * Risk and ___ adoption. Jeffrey A. Dubin and Geoffrey S. Rothwell **42** (1989) 201–218
Real exchange rates * A Bayesian analysis of the unit root in ___. Peter Schotman and Herman K. van Dijk **49** (1991) 195–238
Recursive analytical and numerical approaches * A Bayesian analysis of simultaneous equation models by combining ___. Mark F.J. Steel . . **48** (1991) 83–117
Recursive extended natural conjugate prior distribution * Bayesian multivariate exogeneity analysis: An application to a U.K. money demand equation. Mark F.J. Steel and Jean-Francois Richard **49** (1991) 239–274
Recursive solution methods for dynamic linear rational expectations models. Mark W. Watson **41** (1989) 65–89
Redistributive policy strategies * Is the size distribution of income a random walk? Kathy Hayes, D.J. Slottje, Susan Porter-Hudak, and Gerald Scully **43** (1990) 213–226
Redistributive system * Interpreting the magnitude of changes in measures of income inequality. McKinley L. Blackburn **42** (1989) 21–25
Reduced form model
A dispersion-dependency diagnostic test for aggregation error: With applications to monetary economics and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34
How to live with misspecification if you must. Esfandiar Maasoumi **44** (1990) 67–86

Regression
Asymptotic optimality of generalized C(L), cross-validation, and generalized cross-validation in ___ with heteroskedastic errors. Donald W.K. Andrews **47** (1991) 359–377
Limiting power of unit-root tests in time-series ___. Seiji Nabeya and Katsuto Tanaka **46** (1990) 247–271
Mode ___. Myoung-jae Lee **42** (1989) 337–349
Testing for strong serial correlation and dynamic conditional heteroskedasticity in multiple ___. P.M. Robinson **47** (1991) 67–84
Regression autocorrelation tests * Finite sample power of linear ___. Walter Kramer and Helmut Zeisel **43** (1990) 363–372
Regression-based diagnostics * On the application of robust ___ to models of conditional means and conditional variances. Jeffrey M. Wooldridge **47** (1991) 5–46
Regression-based tests for overdispersion in the Poisson model. A. Colin Cameron and Pravin K. Trivedi **46** (1990) 347–364
Regression coefficients
Effects of collinearity on information about ___. Ehsan S. Soofi **43** (1990) 255–274
Estimation of ___ with the help of characteristic functions. Kees van Montfort, Ab Mooijaart, and Jan de Leeuw **41** (1989) 267–278
Identification and estimation of polynomial errors-in-variables models. Jerry A. Hausman, Whitney K. Newey, Hidehiko Ichimura, and James L. Powell **50** (1991) 273–295
On estimating and testing in a linear regression model with autocorrelated errors. Kazuhiro Ohtani **44** (1990) 333–346
Regression design * The finite-sample distributions of heteroskedasticity robust Wald statistics. Andrew Chesher and Gerard Austin **47** (1991) 153–173
Regression disturbances * Testing for fourth-order autocorrelation in ___ when first-order autocorrelation is present. Maxwell L. King . . . **41** (1989) 285–301
Regression estimators * Asymptotic normality and consistency of seminonparametric ___ using an upwards F test truncation rule. Brian J. Eastwood **48** (1991) 151–181
Regression methods
A statistical perspective on insurance rate-making. Cheng Hsiao, Changseob Kim, and Grant Taylor **44** (1990) 5–24
Intertemporal asset pricing: An empirical investigation. Jay Shanken **45** (1990) 99–120
Regression model(s)
A note concerning specifications of interactive random-coefficient ___. Joseph P. Gatto, Harry H. Kelejian, and Scott W. Stephan . **47** (1991) 273–284
A note on Bayesian inference in a ___ with elliptical errors. Jacek Osiewalski **48** (1991) 183–193
Bootstrapping improved estimators for linear ___. David Brownstone **44** (1990) 171–187
Estimation of a ___ on two or more sets of differently grouped data. Mototsugu Fukushige and Michio Hatanaka **47** (1991) 207–226
Estimation of a linear ___ with stationary ARMA(p, q) errors. Victoria Zinde-Walsh and John W. Galbraith **47** (1991) 333–357
On estimating and testing in a linear ___ with autocorrelated errors. Kazuhiro Ohtani **44** (1990) 333–346
Pre-testing for linear restrictions in a ___ with spherically symmetric disturbances. Judith A. Giles **50** (1991) 377–398
Small-disturbance asymptotics and the Durbin-Watson and related tests in the dynamic ___. Maxwell L. King and Ping X. Wu **47** (1991) 145–152
Regression models for positive random variables. James B. McDonald and Richard J. Butler **43** (1990) 227–251
Regression residuals * The Durbin-Watson ratio under infinite-variance errors. Peter C.B. Phillips and Mico Loretan **47** (1991) 85–114

Regression selection and estimation * A Bayesian approach to ___ , with application to a price index for radio services. Brent R. Moulton . . . **49** (1991) 169–193
Regularity conditions * ARCH models as diffusion approximations. Daniel B. Nelson . . . **45** (1990) 7–38
Reparametrization * A note on the estimation of nonsymmetric dynamic factor demand models. Dilip B. Madan and Ingmar R. Prucha **42** (1989) 275–283
Research and development productivity * Detecting multiple outliers with an application to ___. Peter C. Reiss . . . **43** (1990) 293–315
Reserve-labor hypothesis * The ___, short-run pricing theories, and the employment-output relationship. Steven Garber . . . **42** (1989) 219–245
Residual analysis * An intervention analysis of the War on Poverty: Poverty's persistence and political-business cycle implications. Thomas B. Fomby and Kathy J. Hayes . . . **43** (1990) 197–212
Residual-based procedures * On the application of robust, regression-based diagnostics to models of conditional means and conditional variances. Jeffrey M. Wooldridge . . . **47** (1991) 5–46
Residual risk revisited. Bruce N. Lehmann . . . **45** (1990) 71–97
Residual variances * Intertemporal asset pricing: An empirical investigation. Jay Shanken . . . **45** (1990) 99–120
Residuals * A note on the asymptotic distribution of impulse response functions of estimated VAR models with orthogonal ___. Helmut Lutkepohl . . . **42** (1989) 371–376
Response functions * A note on the asymptotic distribution of impulse ___ of estimated VAR models with orthogonal residuals. Helmut Lutkepohl . . . **42** (1989) 371–376
Restricted factor models * Identification in ___ and the evaluation of rank conditions. Paul A. Bekker . . . **41** (1989) 5–16
Restrictions
An efficient GLS estimator of triangular models with covariance ___. Manuel Arellano . . . **42** (1989) 267–273
On the efficient estimation of simultaneous equations with covariance ___. Manuel Arellano . . . **42** (1989) 247–265
Retirement history survey * Black-white mortality inequalities. Jere R. Behrman, Robin Sickles, Paul Taubman, and Abdo Yazbeck . . . **50** (1991) 183–203
Returns to scale
Recent developments in DEA: The mathematical programming approach to frontier analysis. Lawrence M. Seiford and Robert M. Thrall . . . **46** (1990) 7–38
Seminonparametric Bayesian estimation of the asymptotically ideal production model. William A. Barnett, John Geweke, and Michael Wolfe . . . **49** (1991) 5–50
Risk * Residual ___ revisited. Bruce N. Lehmann . . . **45** (1990) 71–97
Risk-adjusted return * Intertemporal asset pricing: An empirical investigation. Jay Shanken . . . **45** (1990) 99–120
Risk and reactor safety systems adoption. Jeffrey A. Dubin and Geoffrey S. Rothwell . . . **42** (1989) 201–218
Risk-effective shrinkage estimator * An adaptive empirical Bayes estimator of the multivariate normal mean under quadratic loss. G.G. Judge, R. Carter Hill, and M.E. Bock . . . **44** (1990) 189–213
Risk functions * Pre-testing for linear restrictions in a regression model with spherically symmetric disturbances. Judith A. Giles . . . **50** (1991) 377–398
Risk premia
Asset pricing with a FACTOR-ARCH covariance structure: Empirical estimates for Treasury bills. Robert F. Engle, Victor K. Ng, and Michael Rothschild . . . **45** (1990) 213–237
Intertemporal asset pricing: An empirical investigation. Jay Shanken . . . **45** (1990) 99–120

Risk results * Some ___ for a two-stage pre-test estimator in the case of possible heteroskedasticity. Ahmet Ozcam and George G. Judge . . . **48** (1991) 355–371
Robust estimation * Bounded-influence estimators for the SURE model. Franco Peracchi . . . **48** (1991) 119–134
Robust estimation based on grouped-adjusted data in linear regression models. Kazumitsu Nawata . . . **43** (1990) 317–336
Robust, regression-based diagnostics * On the application of ___ to models of conditional means and conditional variances. Jeffrey M. Wooldridge . . . **47** (1991) 5–46
Robust tests
Power and robustness of jackknife and likelihood-ratio tests for grouped heteroscedasticity. Subhash C. Sharma and Carmelo Giaccotto . . . **49** (1991) 343–372
Specification testing and quasi-maximum-likelihood estimation. Jeffrey M. Wooldridge . . . **48** (1991) 29–55
Robust Wald statistics * The finite-sample distributions of heteroskedasticity ___. Andrew Chesher and Gerard Austin . . . **47** (1991) 153–173
Roots * Multiple ___ of the Tobit log-likelihood. William Greene **46** (1990) 365–380
Rotating-panel designs * The efficiency of ___ in an analysis-of-variance model. Theo Nijman, Marno Verbeek, and Arthur van Soest **49** (1991) 373–399

Safety systems * Risk and reactor ___ adoption. Jeffrey A. Dubin and Geoffrey S. Rothwell . . . **42** (1989) 201–218
Sample distributions * The finite-___ of heteroskedasticity robust Wald statistics. Andrew Chesher and Gerard Austin . . . **47** (1991) 153–173
Sample performance * The small-___ of the information-matrix test. Chris Orme . . . **46** (1990) 309–331
Sample power * Finite ___ of linear regression autocorrelation tests. Walter Kramer and Helmut Zeisel . . . **43** (1990) 363–372
Sample selection * A statistical perspective on insurance rate-making. Cheng Hsiao, Changseob Kim, and Grant Taylor . . . **44** (1990) 5–24
Sample surveys * Income inequality measures based on ___. Fredrik Nygard and Arne Sandstrom . . . **42** (1989) 81–95
Sampling distributions * Bootstrapping improved estimators for linear regression models. David Brownstone . . . **44** (1990) 171–187
Sampling experiment(s)
An adaptive empirical Bayes estimator of the multivariate normal mean under quadratic loss. G.G. Judge, R. Carter Hill, and M.E. Bock . . . **44** (1990) 189–213
Mallows' C(p) criterion and unbiasedness of model selection. Masahito Kobaysahi and Shinichi Sakata . . . **45** (1990) 385–395
Mean squared errors of forecast for selecting nonnested linear models and comparison with other criteria. Hiroki Tsurumi and Hajime Wago . . . **48** (1991) 215–240
Power and robustness of jackknife and likelihood-ratio tests for grouped heteroscedasticity. Subhash C. Sharma and Carmelo Giaccotto . . . **49** (1991) 343–372
Sampling performance * On estimating and testing in a linear regression model with autocorrelated errors. Kazuhiro Ohtani . . . **44** (1990) 333–346
Sampling properties * Income inequality measures based on sample surveys. Fredrik Nygard and Arne Sandstrom . . . **42** (1989) 81–95
Sampling variance and decomposable inequality measures. Frank A. Cowell . . . **42** (1989) 27–41
Savage density ratio method * A Bayesian approach to testing the arbitrage pricing theory. Robert McCulloch and Peter E. Rossi **49** (1991) 141–168

Scale efficiency * Largest size-efficient scale and size efficiencies of decision-making units in data envelopment analysis. Ajay Maindiratta **46** (1990) 57–72
Scaling * On the relation between GARCH and stable processes. Casper G. de Vries **48** (1991) 313–324
Scarcity rents * The measurement of productivity and ___: The case of asbestos in Canada. Pierre Lasserre and Pierre Ouellette **48** (1991) 287–312
Score test * Regression-based tests for overdispersion in the Poisson model. A. Colin Cameron and Pravin K. Trivedi **46** (1990) 347–364
Score vector * Classical tests for contemporaneously uncorrelated disturbances in the linear simultaneous equations model. Darrell A. Turkington **42** (1989) 299–317
Scoring * Extensions of estimation methods using the EM algorithm. Paul A. Ruud **49** (1991) 305–341
Seasonal integration and cointegration. S. Hylleberg, R.F. Engle, C.W.J. Granger, and B.S. Yoo **44** (1990) 215–238
Seasonal time-series processes * The implications of periodically varying coefficients for ___. Denise R. Osborn **48** (1991) 373–384
Seasonally adjusted quarterly data * Forecasting with demand systems: A comparative study. Marcus J. Chambers **44** (1990) 363–376
Selection
Mallows' C(p) criterion and unbiasedness of model ___. Masahito Kobayashi and Shinichi Sakata **45** (1990) 385–395
The likelihood dominance criterion: A new approach to model ___. Robert A. Pollak and Terence J. Wales **47** (1991) 227–242
Selectivity bias * Induced work participation and the returns to experience for welfare women: Evidence from a social experiment. Dan Steinberg **41** (1989) 321–340
Seminonparametric Bayesian estimation of the asymptotically ideal production model. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
Seminonparametric methodology * Using conditional moments of asset payoffs to infer the volatility of intertemporal marginal rates of substitution. A. Ronald Gallant, Lars Peter Hansen, and George Tauchen **45** (1990) 141–179
Seminonparametric regression estimators * Asymptotic normality and consistency of ___ using an upwards F test truncation rule. Brian J. Eastwood **48** (1991) 151–181
Semiparametric alternatives * Distributional specification tests against ___. Simon Peters and Richard J. Smith **47** (1991) 175–194
Semiparametric structural analysis * A ___ of the idling of cement kilns. Sanghamitra Das **50** (1991) 235–256
Sensitivity analysis * A Bayesian approach to testing the arbitrage pricing theory. Robert McCulloch and Peter E. Rossi **49** (1991) 141–168
Serial correlation
A transformation that will circumvent the problem of autocorrelation in an error-component model. Badi H. Baltagi and Qi Li **48** (1991) 385–393
Least absolute error estimation in the presence of ___. Andrew A. Weiss **44** (1990) 127–158
Optimal invariant tests for the autocorrelation coefficient in linear regressions with stationary or nonstationary AR(1) errors. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
Testing for strong ___ and dynamic conditional heteroskedasticity in multiple regression. P.M. Robinson **47** (1991) 67–84
The Durbin-Watson ratio under infinite-variance errors. Peter C.B. Phillips and Mico Loretan **47** (1991) 85–114

Service production * Deterministic parametric and nonparametric estimation of efficiency in ___: A comparison. Hans Bjurek, Lennart Hjalmarsson, and Finn R. Forsund **46** (1990) 213–227
Shadow economy * Maximum likelihood estimation of the dynamic shock-error model. Damayanti Ghosh **41** (1989) 121–143
Shock-error model * Maximum likelihood estimation of the dynamic ___. Damayanti Ghosh **41** (1989) 121–143
Short-run pricing theories * The reserve-labor hypothesis, ___ , and the employment-output relationship. Steven Garber **42** (1989) 219–245
Shrinkage estimators * An adaptive empirical Bayes estimator of the multivariate normal mean under quadratic loss. G.G. Judge, R. Carter Hill, and M.E. Bock **44** (1990) 189–213
Simulation estimation of time-series models. Bong-Soo Lee and Beth Fisher Ingram **47** (1991) 197–205
Simultaneous equation system * An efficient GLS estimator of triangular models with covariance restrictions. Manuel Arellano **42** (1989) 267–273
Simultaneous equations
Bounds for exact moments of estimators in the errors-in-variables model and ___. Ralph Friedmann **45** (1990) 367–384
On the efficient estimation of ___ with covariance restrictions. Manuel Arellano **42** (1989) 247–265
Simultaneous equations with covariance restrictions. Thomas J. Rothenberg and Paul A. Ruud **44** (1990) 25–39
Simultaneous equations model
Classical tests for contemporaneously uncorrelated disturbances in the linear ___. Darrell A. Turkington **42** (1989) 299–317
The ___ revisited: Statistical adequacy and identification. Aris Spanos **44** (1990) 87–105
Simultaneous-equations modeling
A Bayesian analysis of ___ by combining recursive analytical and numerical approaches. Mark F.J. Steel **48** (1991) 83–117
A statistical perspective on insurance rate-making. Cheng Hsiao, Changseob Kim, and Grant Taylor **44** (1990) 5–24
Induced work participation and the returns to experience for welfare women: Evidence from a social experiment. Dan Steinberg **41** (1989) 321–340
Single-equation econometric models * A unified approach to estimation and orthogonality tests in linear ___. M. Hashem Pesaran and Richard J. Smith **44** (1990) 41–66
Single-input–single-output systems * Linear dynamic errors-in-variables models: Some structure theory. M. Deistler and B.D.O. Anderson . . **41** (1989) 39–63
Single-product measures * On the measurement of economic capacity utilization for multi-product industries. Kathleen Segerson and Dale Squires **44** (1990) 347–361
Situation comparisons * Welfare comparisons and ___. Robert A. Pollack **50** (1991) 31–48
Size distribution
Is ___ of income a random walk? Kathy Hayes, Susan Porter-Hudak, Gerald Scully, and D.J. Slottje **43** (1990) 213–226
Methodological issues in the estimation of the ___ of household wealth. Edward N. Wolff **43** (1990) 179–195
Remembrance of things past the distribution of earnings across occupations and the kappa criterion. Joseph G. Hirschberg and D.J. Slottje **42** (1989) 121–130
Size efficiencies * Largest size-efficient scale and ___ of decision-making units in data envelopment analysis. Ajay Maindiratta **46** (1990) 57–72
Size-efficient scale * Largest ___ and size efficiencies of decision-making units in data envelopment analysis. Ajay Maindiratta **46** (1990) 57–72

Size income distribution * A multinomial probability model of ___. Charles A. Diamond, Curtis J. Simon, and John T. Warner **43** (1990) 43–61
Slutsky symmetry * Testing ___ in systems of linear demand equations. J. Lew Silver and Mukhtar M. Ali **41** (1989) 251–266
Small-disturbance asymptotics and the Durbin-Watson and related tests in the dynamic regression model. Maxwell L. King and Ping X. Wu **47** (1991) 145–152
Small-sample adjusted test statistics * Forecasting with demand systems: A comparative study. Marcus J. Chambers **44** (1990) 363–376
Small-sample performance * The ___ of the information-matrix test. Chris Orme **46** (1990) 309–331
Small-sample power properties * Testing for fourth-order autocorrelation in regression disturbances when first-order autocorrelation is present. Maxwell L. King **41** (1989) 285–301
Small-sample properties
Least absolute error estimation in the presence of serial correlation. Andrew A. Weiss **44** (1990) 127–158
On estimating and testing in a linear regression model with autocorrelated errors. Kazuhiro Ohtani **44** (1990) 333–346
Testing Slutsky symmetry in systems of linear demand equations. J. Lew Silver and Mukhtar M. Ali **41** (1989) 251–266
Small-sample properties of OLS * Estimation of a linear regression model with stationary ARMA(p,q) errors. Victoria Zinde-Walsh and John W. Galbraith **47** (1991) 333–357
Small-sample results * Cointegration tests in present value relationships: A Bayesian look at the bivariate properties of stock prices and dividends. Gary Koop **49** (1991) 105–139
Social experiment * Induced work participation and the returns to experience for welfare women: Evidence from a ___. Dan Steinberg **41** (1989) 321–340
Social index numbers * Normative index numbers. Daniel T. Slesnick .. **50** (1991) 107–130
Social utility * Family size and ___: Income distribution dominance criteria. Francois Bourguignon **42** (1989) 67–80
Social welfare function(s)
Inequality and the standard of living. Dale W. Jorgenson and Daniel T. Slesnick **43** (1990) 103–120
On the relationship between income inequality measures and ___. Camilo Dagum **43** (1990) 91–102
Statistical and measurement issues in assessing the welfare status of aged individuals and populations. Kenneth G. Manton, Max A. Woodbury, and Eric Stallard **50** (1991) 151–181
Spatial variation * Price elasticities from survey data: Extensions and Indonesian results. Angus Deaton **44** (1990) 281–309
Specification error * A dispersion-dependency diagnostic test for aggregation error: With applications to monetary economics and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34
Specification selection * Seminonparametric Bayesian estimation of the asymptotically ideal production model. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
Specification test principle * Detecting multiple outliers with an application to R&D productivity. Peter C. Reiss **43** (1990) 293–315
Specification tests
A unified approach to estimation and orthogonality tests in linear single-equation econometric models. M. Hashem Pesaran and Richard J. Smith **44** (1990) 41–66
Analysis of survival data: Estimation and ___ using asymptotic least squares. H. Jayet and A. Moreau **48** (1991) 263–285
Distributional ___ against semi-parametric alternatives. Simon Peters and Richard J. Smith **47** (1991) 175–194

Specification testing and quasi-maximum-likelihood estimation. Jeffrey M. Wooldridge **48** (1991) 29–55
Specification uncertainty
Bayesian approach to regression selection and estimation, with application to a price index for radio services. Brent R. Moulton **49** (1991) 169–193
Bayesian multivariate exogeneity analysis: An application to a U.K. money demand equation. Mark F.J. Steel and Jean-Francois Richard **49** (1991) 239–274
Specifications * A note concerning ___ of interactive random-coefficient regression models. Joseph P. Gatto, Harry H. Kelejian, and Scott W. Stephan **47** (1991) 273–284
Spectral based testing of the martingale hypothesis. Steven N. Durlauf . . **50** (1991) 355–376
Spectral theory * The efficiency of rotating-panel designs in an analysis-of-variance model. Theo Nijman, Marno Verbeek, and Arthur van Soest **49** (1991) 373–399
Spherical disturbances * A transformation that will circumvent the problem of autocorrelation in an error-component model. Badi H. Baltagi and Qi Li **48** (1991) 385–393
Spherically symmetric disturbances * Pre-testing for linear restrictions in a regression model with ___. Judith A. Giles **50** (1991) 377–398
Squared-error loss function
Bootstrapping improved estimators for linear regression models. David Brownstone **44** (1990) 171–187
Some risk results for a two-stage pre-test estimator in the case of possible heteroskedasticity. Ahmet Ozcam and George G. Judge **48** (1991) 355–371
Stability profiles * Generalized entropy measures of mobility for different sexes and income levels. Esfandiar Maasoumi and Sourushe Zandvakili **43** (1990) 121–133
Stability tests * Are consumption-based intertemporal capital asset pricing models structural? Eric Ghysels and Alastair Hall **45** (1990) 121–139
Stable processes * On the relation between GARCH and stable processes. Casper G. de Vries **48** (1991) 313–324
Standard of living * Inequality and the ___. Dale W. Jorgensen and Daniel T. Slesnick **43** (1990) 103–120
State-space approach * Modeling stochastic and cyclical components of technical change: An application of the Kalman filter. Margaret E. Slade **41** (1989) 363–383
State-space representation
A method for approximate representation of vector-valued time series and its relation to two alternatives. Masanao Aoki and Arthur Havenner **42** (1989) 181–199
Maximum likelihood estimation of the dynamic shock-error model. Damayanti Ghosh **41** (1989) 121–143
Recursive solution methods for dynamic linear rational expectations models. Mark W. Watson **41** (1989) 65–89
Stationary ARMA(p,q) errors * Estimation of a linear regression model with ___. Victoria Zinde-Walsh and John W. Galbraith **47** (1991) 333–357
Stationary Gaussian ARMA process * Estimation of a linear regression model with stationary ARMA(p, q) errors. Victoria Zinde-Walsh and John W. Galbraith **47** (1991) 333–357
Stationary or nonstationary AR(1) errors * Optimal invariant tests for the autocorrelation coefficient in linear regressions with ___. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
Stationary time series * Identification and estimation of the dynamic errors-in-variables models. Anthony M. Bloch **41** (1989) 145–158
Statistical adequacy * The simultaneous-equations model revisited: ___ and identification. Aris Spanos **44** (1990) 87–105

Statistical and measurement issues in assessing the welfare status of aged individuals and populations. Kenneth G. Manton, Max A. Woodbury, and Eric Stallard **50** (1991) 151–181
Statistical identification * The simultaneous-equations model revisited: Statistical adequacy and identification. Aris Spanos **44** (1990) 87–105
Statistical perspective * A ___ on insurance rate-making. Cheng Hsiao, Changseob Kim, and Grant Taylor **44** (1990) 5–24
Statistical properties of between-group income differentials. Joseph L. Gastwirth, Tapan K. Nayak, and Jane-Ling Wang **42** (1989) 5–19
Statistics
Asymptotic relative efficiency of the classical test ___ under misspecification. Pentti Saikkonen **42** (1989) 351–369
The finite-sample distributions of heteroskedasticity robust Wald ___. Andrew Chesher and Gerard Austin **47** (1991) 153–173
Stein-rule estimator * Bootstrapping improved estimators for linear regression models. David Brownstone **44** (1990) 171–187
Stein-type estimators * An adaptive empirical Bayes estimator of the multivariate normal mean under quadratic loss. G.G. Judge, R. Carter Hill, and M.E. Bock **44** (1990) 189–213
Stochastic aggregation theory * A dispersion-dependency diagnostic test for aggregation error: With applications to monetary economics and income distribution. William A. Barnett and Apostolos Serletis **43** (1990) 5–34
Stochastic and cyclical components of technical change * Modeling ___: An application of the Kalman filter. Margaret E. Slade **41** (1989) 363–383
Stochastic and deterministic trends * The impact of ___ on money-output causality: A multi-country investigation. Robert Krol and Lee E. Ohanian **45** (1990) 291–308
Stochastic DEA models * Transformations in ___. Jati K. Sengupta . . . **46** (1990) 109–123
Stochastic difference and differential equations * ARCH models as diffusion approximations. Daniel B. Nelson **45** (1990) 7–38
Stochastic equilibrium model * Simulation estimation of time-series models. Bong-soo Lee and Beth Fisher Ingram **47** (1991) 197–205
Stochastic frontier model(s)
A Gamma-distributed ___. William H. Greene **46** (1990) 141–163
Moment-based estimation and testing of ___. Raymond J. Kopp and John Mullahy **46** (1990) 165–183
Stochastic frontiers * Recent developments in the econometric estimation of frontiers. Paul W. Bauer **46** (1990) 39–56
Stochastic model(s)
An econometric analysis of nonsynchronous trading. Andrew W. Lo and A. Craig MacKinlay **45** (1990) 181–211
Analysis of time series subject to changes in regime. James D. Hamilton **45** (1990) 39–70
Stochastic parametric and stochastic nonparametric frontier models * Measuring cost efficiency in banking: Econometric and linear programming evidence. Gary D. Ferrier and C.A. Knox Lovell **46** (1990) 229–245
Stochastic regressors * The classical principles of testing using instrumental variables estimates. Michael A. Magdalinos **44** (1990) 241–279
Stochastic specification * Empirical models of discrete games. Timothy F. Breshnahan and Peter C. Reiss **48** (1991) 57–81
Stochastic utility maximization * On the compatibility of nested logit models with utility maximization. Axel Borsch-Supan **43** (1990) 373–388
Stochastic volatility * Pricing foreign currency options with ___. Angelo Melino and Stuart M. Turnbull **45** (1990) 239–265
Stochastic volatility specifications * ARCH models as diffusion approximations. Daniel B. Nelson **45** (1990) 7–38

Stock market behavior * A posterior odds analysis of the weekend effect. Robert A. Connolly **49** (1991) 51–104
Stock price data * Spectral based testing of the martingale hypothesis. Steven N. Durlauf **50** (1991) 355–376
Stock prices and dividends * Cointegration tests in present value relationships: A Bayesian look at the bivariate properties of ___. Gary Koop **49** (1991) 105–139
Stock volatility * Alternative models for conditional ___. Adrian R. Pagan and G. William Schwert **45** (1990) 267–290
Structural analysis * A semiparametric ___ of the idling of cement kilns. Sanghamitra Das **50** (1991) 235–256
Structural covariance matrix * On the efficient estimation of simultaneous equations with covariance restrictions. Manuel Arellano **42** (1989) 247–265
Structural identification * The simultaneous-equations model revisited: Statistical adequacy and identification. Aris Spanos **44** (1990) 87–105
Structural invariance * Are consumption-based intertemporal capital asset pricing models structural? Eric Ghysels and Alastair Hall **45** (1990) 121–139
Structural models
Are consumption-based intertemporal capital asset pricing models structural? Eric Ghysels and Alastair Hall **45** (1990) 121–139
Identification and estimation of polynomial errors-in-variables models. Jerry A. Hausman, Whitney K. Newey, Hidehiko Ichimura, and James L. Powell **50** (1991) 273–295
Recursive solution methods for dynamic linear rational expectations models. Mark W. Watson **41** (1989) 65–89
The simultaneous-equations model revisited: Statistical adequacy and identification. Aris Spanos **44** (1990) 87–105
Structural parameters * The classical principles of testing using instrumental variables estimates. Michael A. Magdalinos **44** (1990) 241–279
Structure theory * Linear dynamic errors-in-variables models: Some ___. M. Deistler and B.D.O. Anderson **41** (1989) 39–63
Student-t regression disturbances * Pre-testing for linear restrictions in a regression model with spherically symmetric disturbances. Judith A. Giles **50** (1991) 377–398
Substitution * Using conditional moments of asset payoffs to infer the volatility of intertemporal marginal rates of ___. A. Ronald Gallant, Lars Peter Hansen, and George Tauchen **45** (1990) 141–179
Supply and demand model * An adjustment-costs model of ___ and import demand. Denis Lawrence **46** (1990) 381–398
SURE (see also Seemingly unrelated regression equations)
SURE model * Bounded-influence estimators for the ___. Franco Peracchi **48** (1991) 119–134
SUR structure * A random coefficient approach to the estimation of residential end-use load profiles. Denzil G. Fiebig, Robert Bartels, and Dennis J. Aigner **50** (1991) 297–327
Surprise variables * Another look at the identification of current rational-expectations models. Janne Rayner **47** (1991) 305–331
Survey data * Price elasticities from ___: Extensions and Indonesian results. Angus Deaton **44** (1990) 281–309
Surveys * Income inequality measures based on sample ___. Fredrik Nygard and Arne Sandstrom **42** (1989) 81–95
Survival data * Analysis of ___: Estimation and specification tests using asymptotic least squares. H. Jayet and A. Moreau **48** (1991) 263–285
Survival function * Nonparametric hazard estimation with time-varying discrete covariates. Siu Fai Leung and Wing Hung Wong **45** (1990) 309–330
Survival models * Personal characteristics, unemployment insurance, and the duration of unemployment. Dean A. Follmann, Matthew S. Goldberg, and Laurie May **45** (1990) 351–366

Swedish social insurance system * Deterministic parametric and nonparametric estimation of efficiency in service production: A comparison. Hans Bjurek, Lennart Hjalmarsson and Finn R. Forsund **46** (1990) 213–227
Symmetric disturbances * Pre-testing for linear restrictions in a regression model with spherically ___. Judith A. Giles **50** (1991) 377–398
Symmetry * Testing Slutsky ___ in systems of linear demand equations. J. Lew Silver and Mukhtar M. Ali **41** (1989) 251–266
Symmetry restrictions * Forecasting with demand systems: A comparative study. Marcus J. Chambers **44** (1990) 363–376
Systems of linear demand equations * Testing Slutsky symmetry in ___. J. Lew Silver and Mukhtar M. Ali **41** (1989) 251–266
Switching regression model * Estimating disequilibrium models with limited a priori price-adjustment information. Walter J. Mayer **41** (1989) 303–320
Switching regressions * A constrained maximum-likelihood approach to estimating ___. Robert E. Phillips **48** (1991) 241–262

Technical change * Modeling stochastic and cyclical components of ___: An application of the Kalman filter. Margaret E. Slade **41** (1989) 363–383
Technical inefficiency * Production frontiers, panel data, and time-varying ___. Subal C. Kumbhakar **46** (1990) 201–211
Technological change
The measurement of productivity and scarcity rents: The case of asbestos in Canada. Pierre Lasserre and Pierre Ouellette **48** (1991) 287–312
Seminonparametric Bayesian estimation of the asymptotically ideal production model. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
Technology adoption * Risk and reactor safety systems adoption. Jeffrey A. Dubin and Geoffrey S. Rothwell **42** (1989) 201–218
Test statistics
A unified approach to estimation and orthogonality tests in linear single-equation econometric models. M. Hashem Pesaran and Richard J. Smith **44** (1990) 41–66
Asymptotic relative efficiency of the classical ___ under misspecification. Pentti Saikkonen **42** (1989) 351–369
Forecasting with demand systems: A comparative study. Marcus J. Chambers **44** (1990) 363–376
Testing
An encompassing approach to conditional mean tests with applications to ___ nonnested hypotheses. Jeffrey M. Wooldridge **45** (1990) 331–350
Estimation and ___ when explanatory variables are endogenous: An application to a demand system. C.L.F. Attfield **48** (1991) 395–408
Grouped-data estimation and ___ in simple labor-supply models. Joshua D. Angrist **47** (1991) 243–266
Moment-based estimation and ___ of stochastic frontier models. Raymond J. Kopp and John Mullahy **46** (1990) 165–183
On estimating and ___ in a linear regression model with autocorrelated errors. Kazuhiro Ohtani **44** (1990) 333–346
Regression-based tests for overdispersion in the Poisson model. A. Colin Cameron and Pravin K. Trivedi **46** (1990) 347–364
Specification ___ and quasi-maximum-likelihood estimation. Jeffrey M. Wooldridge **48** (1991) 29–55
The classical principles of ___ using instrumental variables estimates. Michael A. Magdalinos **44** (1990) 241–279
Testing (see also Diagnostic testing)
Testing for strong serial correlation and dynamic conditional heteroskedasticity in multiple regression. P.M. Robinson **47** (1991) 67–84

Testing for unit roots in autoregressive moving average models: An instrumental variable approach. Sastry G. Pantula and Alastair Hall **48** (1991) 325–353
Testing inequality constraints in linear econometric models. Frank A. Wolak **41** (1989) 205–235
Testing nonnested Euler conditions with quadrature-based methods of approximation. Eric Ghysels and Alastair Hall **46** (1990) 273–308
Testing Slutsky symmetry in systems of linear demand equations. J. Lew Silver and Mukhtar M. Ali **41** (1989) 251–266
Theoretical and small-sample properties * Least absolute error estimation in the presence of serial correlation. Andrew A. Weiss **44** (1990) 127–158
Three-stage least squares with different instruments for different equations. Peter Schmidt **43** (1990) 389–394
Three-stage least-squares estimators * Simultaneous equations with covariance restrictions. Thomas J. Rothenberg and Paul A. Ruud **44** (1990) 25–39
Time autoregressions * Estimating integrated higher-order continuous ___ with an application to money-income causality. A.C. Harvey and James H. Stock **42** (1989) 319–336
Time-dependent parameters * Estimation of ___ in linear models using cross-sections, panels, or both. Theo Nijman and Marno Verbeek . . **46** (1990) 333–346
Time series
A method for approximate representation of vector-valued ___ and its relation to two alternatives. Masanao Aoki and Arthur Havenner **42** (1989) 181–199
An analogue model of phase-averaging procedures. Julia Campos, Neil R. Ericsson, and David F. Hendry **43** (1990) 275–292
Analysis of ___ subject to changes in regime. James D. Hamilton . . **45** (1990) 39–70
Econometric methods and financial ___. Edited by John Y. Campbell and Angelo Melino. Annals 1990-3 . . . . . **45** (1990) 1–290
Identification and estimation of the dynamic errors-in-variables models. Anthony M. Bloch **41** (1989) 145–158
Time series analysis * Spectral based testing of the martingale hypothesis. Steven N. Durlauf **50** (1991) 355–376
Time-series data * Unit-root test for ___ with a linear time trend. Said E. Said **47** (1991) 285–303
Time-series models
An encompassing approach to conditional mean tests with applications to testing nonnested hypotheses. Jeffrey M. Wooldridge . . . **45** (1990) 331–350
Is the size distribution of income a random walk? Kathy Hayes, D.J. Slottje, Susan Porter-Hudak, and Gerald Scully **43** (1990) 213–226
On the application of robust, regression-based diagnostics to models of conditional means and conditional variances. Jeffrey M. Wooldridge **47** (1991) 5–46
Reasonable extreme-bounds analysis. Clive W.J. Granger and Harald F. Uhlig **44** (1990) 159–170
Simulation estimation of ___. Bong-Soo Lee and Beth Fisher Ingram **47** (1991) 197–205
The Durbin-Watson ratio under infinite-variance errors. Peter C.B. Phillips and Mico Loretan **47** (1991) 85–114
Time series processes
Seasonal integration and cointegration. S. Hylleberg, R.F. Engle, C.W.J. Granger, and B.S. Yoo **44** (1990) 215–238
The implications of periodically varying coefficients for seasonal ___. Denise R. Osborn **48** (1991) 373–384
Time-series properties
An econometric analysis of nonsynchronous trading. Andrew W. Lo and A. Craig MacKinlay **45** (1990) 181–211

Cointegration tests in present value relationships: A Bayesian look at the bivariate properties of stock prices and dividends. Gary Koop **49** (1991) 105–139
Time-series regression * Limiting power of unit-root tests in ___. Seiji Nabeya and Katsuto Tanaka **46** (1990) 247–271
Time series techniques * Asset pricing with a FACTOR-ARCH covariance structure: Empirical estimates for Treasury bills. Robert F. Engle, Victor K. Ng, and Michael Rothschild **45** (1990) 213–237
Time-series variation * Production frontiers with cross-sectional and ___ in efficiency levels. Christopher Cornwell, Peter Schmidt, and Robin C. Sickles **46** (1990) 185–200
Time trend * Unit-root test for time-series data with a linear ___. Said E. Said **47** (1991) 285–303
Time trend data, wealth * Methodological issues in the estimation of the size distribution of household wealth. Edward N. Wolff **43** (1990) 179–195
Time-varying discrete covariates * Nonparametric hazard estimation with ___. Siu Fai Leung and Wing Hung Wong **45** (1990) 309–330
Time-varying efficiency * Production frontiers with cross-sectional and time-series variation in efficiency levels. Christopher Cornwell, Peter Schmidt, and Robin C. Sickles **46** (1990) 185–200
Time-varying parameter * Forecasting turning points in international output growth rates using Bayesian exponentially weighted autoregression, ___, and pooling techniques. Arnold Zellner, Chansik Hong, and Chung-ki Min **49** (1991) 275–304
Time-varying technical inefficiency * Production frontiers, panel data, and ___. Subal C. Kumbhakar **46** (1990) 201–211
Tobit log-likelihood * Multiple roots of the ___. William Greene **46** (1990) 365–380
Tobit model * Bounded-influence estimators for the ___. Franco Peracchi **44** (1990) 107–126
Trading * An econometric analysis of nonsynchronous ___. Andrew W. Lo and A. Craig MacKinlay **45** (1990) 181–211
Transformation * A ___ that will circumvent the problem of autocorrelation in an error-component model. Badi H. Baltagi and Qi Li **48** (1991) 385–393
Transformation (see also Data transformation)
Transformation procedure * A note on Park and Heikes' (1983) modified approximate estimator for the first-order moving-average process. Askar H. Choudhury and Robert D. St. Louis **46** (1990) 399–406
Transformations in stochastic DEA models. Jati K. Sengupta **46** (1990) 109–123
Transformed model * A note on the application of the non-linear two-stage least-squares estimator to a Box-Cox ___. J. Daniel Khazzoom **42** (1989) 377–379
Translog cost function * The measurement of productivity and scarcity rents: The case of asbestos in Canada. Pierre Lasserre and Pierre Ouellette **48** (1991) 287–312
Translog demand system
Coherency of the indirect ___ with binding nonnegativity constraints. Arthur van Soest and Peter Kooreman **44** (1990) 391–400
Ordinal and cardinal utility: An integration of the two dimensions of the welfare concept. Bernard M.S. van Praag **50** (1991) 69–89
Translog indirect utility function * A numerical methods approach to calculating cost-of-living indices. Susan Porter-Hudak and Kathy Hayes **50** (1991) 91–105
Treasury bills * Asset pricing with a FACTOR-ARCH covariance structure: Empirical estimates for ___. Robert F. Engle, Victor K. Ng, and Michael Rothschild **45** (1990) 213–237
Trend tests * The impact of stochastic and deterministic trends on money-output causality: A multi-country investigation. Robert Krol and Lee E. Ohanian **45** (1990) 291–308

Triangular models * An efficient GLS estimator of ___ with covariance restrictions. Manuel Arellano **42** (1989) 267–273
Truncated normal-regression model * The small-sample performance of the information-matrix test. Chris Orme **46** (1990) 309–331
Truncated regression model * Multiple roots of the Tobit log-likelihood. William Greene **46** (1990) 365–380
Truncation rule * Asymptotic normality and consistency of semi-nonparametric regression estimators using an upwards F test ___. Brian J. Eastwood **48** (1991) 151–181
Turning points * Forecasting ___ in international output growth rates using Bayesian exponentially weighted autoregression, time-varying parameter, and pooling techniques. Arnold Zellner, Chansik Hong, and Chung-ki Min **49** (1991) 275–304
Two-category random coefficient model * A note concerning specifications of interactive random-coefficient regression models. Joseph P. Gatto, Harry H. Kelejian, and Scott W. Stephan **47** (1991) 273–284
Two-period model * Measuring wealth in a simple ___. John Creedy . . **43** (1990) 167–177
Two-stage estimator * Estimation of a linear regression model with stationary ARMA(p, q) errors. Victoria Zinde-Walsh and John W. Galbraith **47** (1991) 333–357
Two-stage instrumental variable estimators for the nonlinear errors-in-variables model. Yasuo Amemiya **44** (1990) 311–332
Two-stage least-squares estimator * A note on the application of the non-linear ___ to a Box-Cox transformed model. J. Daniel Khazzoom **42** (1989) 377–379
Two-stage pre-test estimator * Some risk results for a ___ in the case of possible heteroskedasticity. Ahmet Ozcam and George G. Judge . . . **48** (1991) 355–371

Unbiasedness * Mallows' C(p) criterion and ___ of model selection. Masahito Kobayashi and Shinichi Sakata **45** (1990) 385–395
Uncorrelated disturbances * Classical tests for contemporaneously ___ in the linear simultaneous equations model. Darrell A. Turkington . **42** (1989) 299–317
Unemployment * Personal characteristics, ___ insurance, and the duration of ___. Dean A. Follmann, Matthew S. Goldberg, and Laurie May **45** (1990) 351–366
Uniform strong law * On the asymptotic normality of Fourier flexible form estimates. A. Ronald Gallant and Geraldo Souza **50** (1991) 329–353
Unit-elasticity error-correction model * Seasonal integration and cointegration. S. Hylleberg, R.F. Engle, C.W.J. Granger, and B.S. Yoo . . . **44** (1990) 215–238
Unit root(s)
A Bayesian analysis of the ___ in real exchange rates. Peter Schotman and Herman K. van Dijk **49** (1991) 195–238
Testing for ___ in autoregressive moving average models: An instrumental variable approach. Sastry G. Pantula and Alastair Hall . . **48** (1991) 325–353
Seasonal integration and cointegration. S. Hylleberg, R.F. Engle, C.W.J. Granger, and B.S. Yoo **44** (1990) 215–238
Unit-root hypotheses * Optimal invariant tests for the autocorrelation coefficient in linear regressions with stationary or nonstationary AR(1) errors. Jean-Marie Dufour and Maxwell L. King **47** (1991) 115–143
Unit-root test for time-series data with a linear time trend. Said E. Said **47** (1991) 285–303
Unit root tests
Cointegration tests in present value relationships: A Bayesian look at the bivariate properties of stock prices and dividends. Gary Koop **49** (1991) 105–139
Limiting power of ___ in time-series regression. Seiji Nabeya and Katsuto Tanaka **46** (1990) 247–271

United Kingdom money demand equation * Bayesian multivariate exogeneity analysis: An application to a ___. Mark F.J. Steel and Jean-Francois Richard **49** (1991) 239–274
United States airline industry * Production frontiers with cross-sectional and time-series variation in efficiency levels. Christopher Cornwell, Peter Schmidt, and Robin C. Sickles **46** (1990) 185–200
United States banking * Measuring cost efficiency in banking: Econometric and linear programming evidence. Gary D. Ferrier and C.A. Knox Lovell **46** (1990) 229–245
United States cement industry * A semiparametric structural analysis of the idling of cement kilns. Sanghamitra Das **50** (1991) 235–256
United States commercial banks * Polyhedral cone-ratio DEA models with an illustrative application to large commercial banks. A. Charnes, W.W. Cooper, Z.M. Huang, and D.B. Sun **46** (1990) 73–91
United States commercial loan market * Estimating disequilibrium models with limited a priori price-adjustment information. Walter J. Mayer **41** (1989) 303–320
United States electric utility data * Moment-based estimation and testing of stochastic frontier models. Raymond J. Kopp and John Mullahy . . **46** (1990) 165–183
United States manufacturing data
Seminonparametric Bayesian estimation of the asymptotically ideal production model. William A. Barnett, John Geweke, and Michael Wolfe **49** (1991) 5–50
The reserve-labor hypothesis, short-run pricing theories, and the employment-output relationship. Steven Garber **42** (1989) 219–245
United States primary metals industry * Modeling stochastic and cyclical components of technical change: An application of the Kalman filter. Margaret E. Slade **41** (1989) 363–383
United States stock market data * An econometric analysis of nonsynchronous trading. Andrew W. Lo and A. Craig MacKinlay **45** (1990) 181–211
United States stock return data * Alternative models for conditional stock volatility. Adrian R. Pagan and G. William Schwert **45** (1990) 267–290
Univariate Ito process approximations * ARCH models as diffusion approximations. Daniel B. Nelson **45** (1990) 7–38
Univariate trend tests * The impact of stochastic and deterministic trends on money-output causality: A multi-country investigation. Robert Krol and Lee E. Ohanian **45** (1990) 291–308
University of Michigan panel study of income dynamics * Personal characteristics, unemployment insurance, and the duration of unemployment. Dean A. Follmann, Matthew S. Goldberg, and Laurie May **45** (1990) 351–366
Upwards F test truncation rule * Asymptotic normality and consistency of semi-nonparametric regression estimators using an ___. Brian J. Eastwood **48** (1991) 151–181
Utility * Family size and social ___: Income distribution dominance criteria. Francois Bourguignon **42** (1989) 67–80
Utility-equivalent wealth * Measuring wealth in a simple two-period model. John Creedy **43** (1990) 167–177
Utility function(s)
Continuously distributed attributes and measures of multivariate inequality. Esfandiar Maasoumi **42** (1989) 131–144
Family size and social utility: Income distribution dominance criteria. Francois Bourguignon **42** (1989) 67–80
Measuring wealth in a simple two-period model. John Creedy **43** (1990) 167–177
On the relationship between income inequality measures and social welfare functions. Camilo Dagum **43** (1990) 91–102

Utility maximization * On the compatibility of nested logit models with ___. Axel Borsch-Supan **43** (1990) 373–388
Utility-maximizing consumers * Aggregation and identification in consumer demand systems. J.M. Heineke and H.M. Shefrin **44** (1990) 377–390
Utilization * On the measurement of economic capacity ___ for multiproduct industries. Kathleen Segerson and Dale Squires **44** (1990) 347–361

Value-weighted returns * Are consumption-based intertemporal capital asset pricing models structural? Eric Ghysels and Alastair Hall **45** (1990) 121–139
VAR models * A note on the asymptotic distribution of impulse response functions of estimated ___ with orthogonal residuals. Helmut Lutkepohl **42** (1989) 371–376
Variable estimators * Two-stage instrumental ___ for the nonlinear errors-in-variables model. Yasuo Amemiya **44** (1990) 311–332
Variables estimates * The classical principles of testing using instrumental ___. Michael A. Magdalinos **44** (1990) 241–279
Variance * Sampling ___ and decomposable inequality measures. Frank A. Cowell **42** (1989) 27–41
Variance decomposition * The impact of stochastic and deterministic trends on money-output causality: A multi-country investigation. Robert Krol and Lee E. Ohanian **45** (1990) 291–308
Variance errors * The Durbin-Watson ratio under infinite-___. Peter C.B. Phillips and Mico Loretan **47** (1991) 85–114
Variance estimation
A random coefficient approach to the estimation of residential end-use load profiles. Denzil G. Fiebig, Robert Bartels, and Dennis J. Aigner **50** (1991) 297–327
Income inequality measures based on sample surveys. Fredrik Nygard and Arne Sandstrom **42** (1989) 81–95
Variances * On the application of robust, regression-based diagnostics to models of conditional means and conditional ___. Jeffrey M. Wooldridge **47** (1991) 5–46
Variation * Production frontiers with cross-sectional and time-series ___ in efficiency levels. Christopher Cornwell, Peter Schmidt, and Robin C. Sickles **46** (1990) 185–200
Varying coefficients * The implications of periodically ___ for seasonal time-series processes. Denise R. Osborn **48** (1991) 373–384
Vector autoregressive models * A note on the asymptotic distribution of impulse response functions of estimated ___ with orthogonal residuals. Helmut Lutkepohl **42** (1989) 371–376
Vector-input–vector-output systems * Linear dynamic errors-in-variables models: Some structure theory. M. Deistler and B.D.O. Anderson . . **41** (1989) 39–63
Vector-valued time series * A method for approximate representation of ___ and its relation to two alternatives. Masanao Aoki and Arthur Havenner **42** (1989) 181–199
Vector variables * Linear latent variable models and covariance structures. T.W. Anderson **41** (1989) 91–119
Velocity, modelling of * Reasonable extreme-bounds analysis. Clive W.J. Granger and Harald F. Uhlig **44** (1990) 159–170
Volatility
Alternative models for conditional stock ___. Adrian R. Pagan and G. William Schwert **45** (1990) 267–290
Asset pricing with a FACTOR-ARCH covariance structure: Empirical estimates for Treasury bills. Robert F. Engle, Victor K. Ng, and Michael Rothschild **45** (1990) 213–237

Intertemporal asset pricing: An empirical investigation. Jay Shanken **45** (1990) 99–120
On the relation between GARCH and stable processes. Casper G. de Vries **48** (1991) 313–324
Pricing foreign currency options with stochastic ___. Angelo Melino and Stuart M. Turnbull **45** (1990) 239–265
Using conditional moments of asset payoffs to infer the ___ of intertemporal marginal rates of substitution. A. Ronald Gallant, Lars Peter Hansen, and George Tauchen **45** (1990) 141–179
von Neumann ratio * The Durbin-Watson ratio under infinite-variance errors. Peter C.B. Phillips and Mico Loretan **47** (1991) 85–114

Wald multiplier test * The classical principles of testing using instrumental variables estimates. Michael A. Magdalinos **44** (1990) 241–279
Wald statistics
Asymptotic relative efficiency of the classical test statistics under misspecification. Pentti Saikkonen **42** (1989) 351–369
The finite-sample distributions of heteroskedasticity robust ___. Andrew Chesher and Gerard Austin **47** (1991) 153–173
Wald test statistic * Classical tests for contemporaneously uncorrelated disturbances in the linear simultaneous equations model. Darrell A. Turkington **42** (1989) 299–317
Wald tests * On the ___ for globally and locally quadratic restrictions. Gordon C.R. Kemp **50** (1991) 257–272
War on Poverty * An intervention analysis of the ___: Poverty's persistence and political-business cycle implications. Thomas B. Fomby and Kathy J. Hayes **43** (1990) 197–212
Weak exogeneity * Bayesian multivariate exogeneity analysis: An application to a U.K. money demand equation. Mark F.J. Steel and Jean-Francois Richard **49** (1991) 239–274
Wealth data * Optimal grouping of income and ___. J.B. Davies and A.F. Shorrocks **42** (1989) 97–108
Wealth, household * Methodological issues in the estimation of the size distribution of household wealth. Edward N. Wolff **43** (1990) 179–195
Wealth measurement * Measuring wealth in a simple two-period model. John Creedy **43** (1990) 167–177
Weighted autoregression * Forecasting turning points in international output growth rates using Bayesian exponentially ___ , time-varying parameter, and pooling techniques. Arnold Zellner, Chansik Hong, and Chung-ki Min **49** (1991) 275–304
Weighted geometric mean measure * On the empirical relationship between several well-known inequality measures. D.J. Slottje, R.L. Basmann, and M. Nieswiadomy **42** (1989) 49–66
Weighted least squares * Robust estimation based on grouped-adjusted data in linear regression models. Kazumitsu Nawata **43** (1990) 317–336
Weighted nonlinear least-squares estimation * An encompassing approach to conditional mean tests with applications to testing nonnested hypotheses. Jeffrey M. Wooldridge **45** (1990) 331–350
Weighted samples * Improving the accuracy of estimates of Gini coefficients. Robert I. Lerman and Shlomo Yitzhaki **42** (1989) 43–47
Welfare attributes * Continuously distributed attributes and measures of multivariate inequality. Esfandiar Maasoumi **42** (1989) 131–144
Welfare comparisons * The information content of equivalence scales. Richard Blundell and Arthur Lewbel **50** (1991) 49–68
Welfare duration * Regression models for positive random variables. James B. McDonald and Richard J. Butler **43** (1990) 227–251

Welfare-economic analysis * Welfare, preference and freedom. Amartya Sen **50** (1991) 15–29
Welfare functions * On the relationship between income inequality measures and social ___. Camilo Dagum **43** (1990) 91–102
Welfare measurement
A numerical methods approach to calculating cost-of-living indices. Susan Porter-Hudak and Kathy Hayes **50** (1991) 91–105
Black-white mortality inequalities. Jere R. Behrman, Robin Sickles, Paul Taubman, and Abdo Yazbeck **50** (1991) 183–203
Cluster analysis for measuring welfare and quality of life across countries. Joseph G. Hirschberg, Esfandiar Maasoumi, and Daniel J. Slottje **50** (1991) 131–150
Inequality at birth: The scope for policy intervention. Mark R. Rosenzweig and Kenneth I. Wolpin **50** (1991) 205–228
Normative index numbers. Daniel T. Slesnick **50** (1991) 107–130
On the measurement of welfare. Jan Tinbergen **50** (1991) 7–13
Ordinal and cardinal utility: An integration of the two dimensions of the welfare concept. Bernard M.S. van Praag **50** (1991) 69–89
Statistical and measurement issues in assessing the welfare status of aged individuals and populations. Kenneth G. Manton, Max A. Woodbury, and Eric Stallard **50** (1991) 151–181
The information content of equivalence scales. Richard Blundell and Arthur Lewbel **50** (1991) 49–68
Welfare comparisons and situation comparisons. Robert A. Pollack **50** (1991) 31–48
Welfare, preference and freedom. Amartya Sen **50** (1991) 15–29
Welfare transactions * A random-effects logit model of work-___. John Enberg, Peter Gottschalk, and Douglas Wolf **43** (1990) 63–75
Welfare women * Induced work participation and the returns to experience for ___: Evidence from a social experiment. Dan Steinberg **41** (1989) 321–340
White-Eicker estimators * The finite-sample distributions of heteroskedasticity robust Wald statistics. Andrew Chesher and Gerard Austin **47** (1991) 153–173
Work equity project, Minnesota * Induced work participation and the returns to experience for welfare women: Evidence from a social experiment. Dan Steinberg **41** (1989) 321–340
Work participation * Induced ___ and the returns to experience for welfare women: Evidence from a social experiment. Dan Steinberg . **41** (1989) 321–340
Work-welfare transactions * A random-effects logit model of ___. John Enberg, Peter Gottschalk, and Douglas Wolf **43** (1990) 63–75

Zero-intercept restrictions * A Bayesian approach to testing the arbitrage pricing theory. Robert McCulloch and Peter E. Rossi **49** (1991) 141–168

Aigner, Dennis J.
A random coefficient approach to the estimation of residential end-use load profiles (with Denzil G. Fiebig and Robert Bartels) **50** (1991) 297–327
Contributions to econometric methodology in honor of T.W. Anderson. Editor. Annals 1990-2 **44** (1990) 1–238
Editor's introduction. Contributions to econometric methodology in honor of T.W. Anderson. Annals 1990-2 **44** (1990) 1–4
Editors' introduction. Latent variables models (with Manfred Deistler). Annals 1989-2 **41** (1989) 1–3
Latent variables models (edited with Manfred Deistler). Annals 1989-2 **41** (1989) 1–185
Ali, Mukhtar M.
Testing Slutsky symmetry in systems of linear demand equations (with J. Lew Silver) **41** (1989) 251–266
Amemiya, Yasuo
Two-stage instrumental variable estimators for the nonlinear errors-in-variables model **44** (1990) 311–332
Anderson, B.D.O.
Linear dynamic errors-in-variables models: Some structure theory (with M. Deistler) **41** (1989) 39–63
Anderson, T.W.
Linear latent variable models and covariance structures **41** (1989) 91–119
Andrews, Donald W.K.
Asymptotic optimality of generalized C(L), cross-validation, and generalized cross-validation in regression with heteroskedastic errors **47** (1991) 359–377
Angrist, Joshua D.
Grouped-data estimation and testing in simple labor-supply models **47** (1991) 243–266
Aoki, Masanao
A method for approximate representation of vector-valued time series and its relation to two alternatives (with Arthur Havenner) **42** (1989) 181–199
Appelbaum, Elie
Demand conditions, regulation, and the measurement of productivity (with Joseph Berechman) **47** (1991) 379–400
Arellano, Manuel
An efficient GLS estimator of triangular models with covariance restrictions **42** (1989) 267–273
On the efficient estimation of simultaneous equations with covariance restrictions **42** (1989) 247–265
Attfield, C.L.F.
Estimation and testing when explanatory variables are endogenous: An application to a demand system **48** (1991) 395–408
Austin, Gerard
The finite-sample distributions of heteroskedasticity robust Wald statistics (with Andrew Chesher) **47** (1991) 153–173

Baltagi, Badi H.
A transformation that will circumvent the problem of autocorrelation in an error-component model (with Qi Li) **48** (1991) 385–393
Barnett, William A.
A dispersion-dependency diagnostic test for aggregation error: With applications to monetary economics and income distribution (with Apostolos Serletis) **43** (1990) 5–34
Seminonparametric Bayesian estimation of the asymptotically ideal production models (with John Geweke and Michael Wolfe) **49** (1991) 5–50

Bartels, Robert
A random coefficient approach to the estimation of residential end-use load profiles (with Denzil G. Fiebig and Dennis J. Aigner) **50** (1991) 297–327
Basmann, R.L.
A general functional form for approximating the Lorenz curve (with K.J. Hayes, J.D. Johnson, and D.J. Slottje) **43** (1990) 77–90
On the empirical relationship between several well-known inequality measures (with D.J. Slottje and M. Nieswiadomy) **42** (1989) 49–66
Bauer, Paul W.
Recent developments in the econometric estimation of frontiers . . . **46** (1990) 39–56
Baye, Michael R.
The poverty concept when prices are income-dependent (with Bernard M.S. van Praag) **43** (1990) 153–166
Behrman, Jere R.
Black-white mortality inequalities (with Robin Sickles, Paul Taubman, and Abdo Yazbeck) **50** (1991) 183–203
Bekker, Paul A.
Identification in restricted factor models and the evaluation of rank conditions **41** (1989) 5–16
Berechman, Joseph
Demand conditions, regulation, and the measurement of productivity (with Elie Appelbaum) **47** (1991) 379–400
Bjurek, Hans
Deterministic parametric and nonparametric estimation of efficiency in service production: A comparison (with Lennart Hjalmarsson and Finn R. Forsund) **46** (1990) 213–227
Blackburn, McKinley L.
Interpreting the magnitude of changes in measures of income inequality **42** (1989) 21–25
Bloch, Anthony M.
Identification and estimation of dynamic errors-in-variables models **41** (1989) 145–158
Blundell, Richard
The information content of equivalence scales (with Arthur Lewbel) **50** (1991) 49–68
Bock, M.E.
An adaptive empirical Bayes estimator of the multivariate normal means under quadratic loss (with G.G. Judge and R. Carter Hill) **44** (1990) 189–213
Borsch-Supan, Axel
On the compatibility of nested logit models with utility maximization **43** (1990) 373–388
Bourguignon, Francois
Family size and social utility: Income distribution dominance criteria **42** (1989) 67–80
Bresnahan, Timothy F.
Empirical models of discrete games (with Peter C. Reiss) **48** (1991) 57–81
Brownstone, David
Bootstrapping improved estimators for linear regression models **44** (1990) 171–187
Butler, Richard J.
Regression models for positive random variables (with James B. McDonald) **43** (1990) 227–251
Using incomplete moments to measure inequality (with James B. McDonald) **42** (1989) 109–119

Cameron, A. Colin
Regression-based tests for overdispersion in the Poisson model (with Pravin K. Trivedi) **46** (1990) 347–364
Campbell, John Y.
Econometric methods and financial time series (edited with Angelo Melino). Annals 1990-3 . . . . . **45** (1990) 1–290
Editors' introduction. Econometric methods and financial time series (with Angelo Melino). Annals 1990-3 . . . . . **45** (1990) 1–5
Campos, Julia
An analogue model of phase-averaging procedures (with Neil R. Ericsson and David F. Hendry) **43** (1990) 275–292
Chambers, Marcus J.
Forecasting with demand systems: A comparative study **44** (1990) 363–376
Charnes, A.
Polyhedral cone-ratio DEA models with an illustrative application to large commercial banks (with W.W. Cooper, Z.M. Huang, and D.B. Sun) **46** (1990) 73–91
Chesher, Andrew
The finite-sample distributions of heteroskedasticity robust Wald statistics (with Gerard Austin) **47** (1991) 153–173
Choudhury, Askar H.
A note on Park and Heikes' (1983) modified approximate estimator for the first-order moving-average process (with Robert D. St. Louis) **46** (1990) 399–406
Connolly, Robert A.
A posterior odds analysis of the weekend effect **49** (1991) 51–104
Cooper, W.W.
Polyhedral cone-ratio DEA models with an illustrative application to large commercial banks (with A. Charnes, Z.M. Huang, and D.B. Sun) **46** (1990) 73–91
Cornwell, Christopher
Production frontiers with cross-sectional and time-series variation in efficiency levels (with Peter Schmidt and Robin C. Sickles) **46** (1990) 185–200
Cowell, Frank A.
Sampling variance and decomposable inequality measures **42** (1989) 27–41
Grouping bounds for inequality measures under alternative informational assumptions **48** (1991) 1–14
Cramer, J.S.
Pooling states in the multinominal logit model (with G. Ridder) **47** (1991) 267–272
Creedy, John
Measuring wealth in a simple two-period model **43** (1990) 167–177

Dagum, Camilo
On the relationship between income inequality measures and social welfare functions **43** (1990) 91–102
Das, Sanghamitra
A semiparametric structural analysis of the idling of cement kilns . . **50** (1991) 235–256
Davies, J.B.
Optimal grouping of income and wealth data (with A.F. Shorrocks) **42** (1989) 97–108
de Leeuw, Jan
Estimation of regression coefficients with the help of characteristic functions (with Kees van Montfort and Ab Mooijaart) **41** (1989) 267–278
de Vries, Casper G.
On the relation between GARCH and stable processes **48** (1991) 313–324

Deaton, Angus
Price elasticities from survey data: Extensions and Indonesian results **44** (1990) 281–309
Deistler, Manfred
Editors' introduction. Latent variables models (with Dennis J. Aigner). Annals 1989-2 . . . . . **41** (1989) 1–3
Latent variables models (edited with Dennis J. Aigner). Annals 1989-2 . . . . . **41** (1989) 1–185
Linear dynamic errors-in-variables models: Some structure theory (with B.D.O. Anderson) **41** (1989) 39–63
Diamond, Charles A.
A multinomial probability model of size income distribution (with Curtis J. Simon and John T. Warner) **43** (1990) 43–61
Dubin, Jeffrey A.
Risk and reactor safety systems adoption (with Geoffrey S. Rothwell) **42** (1989) 201–218
Dufour, Jean-Marie
Optimal invariant tests for the autocorrelation coefficient in linear regressions with stationary or nonstationary AR(1) errors (with Maxwell L. King) **47** (1991) 115–143
Durlauf, Steven M.
Spectral based testing of the martingale hypothesis **50** (1991) 355–376

Eastwood, Brian J.
Asymptotic normality and consistency of semi-nonparametric regression estimators using an upwards F test truncation rule **48** (1991) 151–181
Enberg, John
A random-effects logit model of work-welfare transactions (with Peter Gottschalk and Douglas Wolf) **43** (1990) 63–75
Engle, Robert F.
Asset pricing with a FACTOR-ARCH covariance structure: Empirical estimates for Treasury bills (with Victor K. Ng and Michael Rothschild) **45** (1990) 213–237
Seasonal integration and cointegration (with S. Hylleberg, C.W.J. Granger, and B.S. Yoo) **44** (1990) 215–238
Ericsson, Neil R.
An analogue model of phase-averaging procedures (with Julia Campos and David F. Hendry) **43** (1990) 275–292

Ferrier, Gary D.
Measuring cost efficiency in banking: Econometric and linear programming evidence (with C.A. Knox Lovell) **46** (1990) 229–245
Fiebig, Denzil G.
A random coefficient approach to the estimation of residential end-use load profiles (with Robert Bartels and Dennis J. Aigner) **50** (1991) 297–327
Follmann, Dean A.
Personal characteristics, unemployment insurance, and the duration of unemployment (with Matthew S. Goldberg and Laurie May) . . **45** (1990) 351–366
Fomby, Thomas B.
An intervention analysis of the War on Poverty: Poverty's persistence and political-business cycle implications (with Kathy J. Hayes) . . **43** (1990) 197–212
Forsund, Finn R.
Deterministic parametric and nonparametric estimation of efficiency in service production: A comparison (with Hans Bjurek and Lennart Hjalmarsson) **46** (1990) 213–227

Friedmann, Ralph
Bounds for exact moments of estimators in the errors-in-variables model and simultaneous equations **45** (1990) 367–384
Fukushige, Mototsugu
Estimation of a regression model on two or more sets of differently grouped data (with Michio Hatanaka) **47** (1991) 207–226

Galbraith, John W.
Estimation of a linear regression model with stationary ARMA(p, q) errors (with Victoria Zinde-Walsh) **47** (1991) 333–357
Gallant, A. Ronald
On the asymptotic normality of Fourier flexible form estimates (with Geraldo Souza) **50** (1991) 329–353
Using conditional moments of asset payoffs to infer the volatility of intertemporal marginal rates of substitution (with Lars Peter Hansen and George Tauchen) **45** (1990) 141–179
Garber, Steven
The reserve-labor hypothesis, short-run pricing theories, and the employment-output relationship **42** (1989) 219–245
Gastwirth, Joseph L.
Statistical properties of between-group income differentials (with Tapan K. Nayak and Jane-Ling Wang) **42** (1989) 5–19
Gatto, Joseph P.
A note concerning specifications of interactive random-coefficient regression models (with Harry H. Kelejian and Scott W. Stephan) **47** (1991) 273–284
Geweke, John
Seminonparametric Bayesian estimation of the asymptotically ideal production models (with William A. Barnett and Michael Wolfe) **49** (1991) 5–50
Ghazal, G.A.
On a pooled estimator and its finite-sample moments (with William M. Mikhail) **48** (1991) 195–214
Ghosh, Damayanti
Maximum likelihood estimation of the dynamic shock-error model . . **41** (1989) 121–143
Ghysels, Eric
Are consumption-based intertemporal capital asset pricing models structural? (with Alastair Hall) **45** (1990) 121–139
Testing nonnested Euler conditions with quadrature-based methods of approximation (with Alastair Hall) **46** (1990) 273–308
Giaccotto, Carmelo
Power and robustness of jackknife and likelihood-ratio tests for grouped heteroscedasticity (with Subhash C. Sharma) **49** (1991) 343–372
Giles, Judith A.
Pre-testing for linear restrictions in a regression model with spherically symmetric disturbances **50** (1991) 377–398
Goldberg, Matthew S.
Personal characteristics, unemployment insurance, and the duration of unemployment (with Dean A. Follmann and Laurie May) **45** (1990) 351–366
Gottschalk, Peter
A random-effects logit model of work-welfare transactions (with John Enberg and Douglas Wolf) **43** (1990) 63–75
Granger, Clive W.J.
Reasonable extreme-bounds analysis (with Harald F. Uhlig) **44** (1990) 159–170
Seasonal integration and cointegration (with S. Hylleberg, R.F. Engle, and B.S. Yoo) **44** (1990) 215–238

Greene, William H.
A Gamma-distributed stochastic frontier model **46** (1990) 141–163
Multiple roots of the Tobit log-likelihood **46** (1990) 365–380

Hall, Alastair
Are consumption-based intertemporal capital asset pricing models structural? (with Eric Ghysels) **45** (1990) 121–139
Testing for unit roots in autoregressive moving average models: An instrumental variable approach (with Sastry G. Pantula) **48** (1991) 325–353
Testing nonnested Euler conditions with quadrature-based methods of approximation (with Eric Ghysels) **46** (1990) 273–308
Hamilton, James D.
Analysis of time series subject to changes in regime **45** (1990) 39–70
Han, Aaron K.
Asymptotic efficiency calculations of the partial likelihood estimator **41** (1989) 237–250
Hansen, Lars Peter
Using conditional moments of asset payoffs to infer the volatility of intertemporal marginal rates of substitution (with A. Ronald Gallant and George Tauchen) **45** (1990) 141–179
Harvey, A.C.
Estimating integrated higher-order continuous time autoregressions with an application to money-income causality (with James H. Stock) **42** (1989) 319–336
Hatanaka, Michio
Estimation of a regression model on two or more sets of differently grouped data (with Mototsugu Fukushige) **47** (1991) 207–226
Hausman, Jerry A.
Identification and estimation of polynomial errors-in-variables models (with Whitney K. Newey, Hidehiko Ichimura, and James L. Powell) **50** (1991) 273–295
Havenner, Arthur
A method for approximate representation of vector-valued time series and its relation to two alternatives (with Masanao Aoki) . . **42** (1989) 181–199
Hayes, Kathy J.
A general functional form for approximating the Lorenz curve (with R.L. Basmann, J.D. Johnson, and D.J. Slottje) **43** (1990) 77–90
A numerical methods approach to calculating cost-of-living indices (with Susan Porter-Hudak) **50** (1991) 91–105
An intervention analysis of the War on Poverty: Poverty's persistence and political-business cycle implications (with Thomas B. Fomby) **43** (1990) 197–212
Is size distribution of income a random walk? (with Susan Porter-Hudak, Gerald Scully, and D.J. Slottje) **43** (1990) 213–226
Heineke, J.M.
Aggregation and identification in consumer demand systems (with H.M. Shefrin) **44** (1990) 377–390
Hendry, David F.
An analogue model of phase-averaging procedures (with Julia Campos and Neil R. Ericsson) **43** (1990) 275–292
Hill, R. Carter
An adaptive empirical Bayes estimator of the multivariate normal means under quadratic loss (with G.G. Judge and M.E. Bock) . . . **44** (1990) 189–213
Hillier, Grant H.
Diagnostic testing (edited with Maxwell L. King). Annals 1991-1 . . . **47** (1991) 1–194
Editors' introduction. Diagnostic testing (with Maxwell L. King). Annals 1991-1 . . . . . **47** (1991) 1–4
On multiple diagnostic procedures for the linear model **47** (1991) 47–66

Hirschberg, Joseph G.
Cluster analysis for measuring welfare and quality of life across countries (with Esfandiar Maasoumi and Daniel J. Slottje) **50** (1991) 131–150
Remembrance of things past the distribution of earnings across occupations and the kappa criterion (with D.J. Slottje) **42** (1989) 121–130
Hjalmarsson, Lennart
Deterministic parametric and nonparametric estimation of efficiency in service production: A comparison (with Hans Bjurek and Finn R. Forsund) **46** (1990) 213–227
Hong, Chansik
Forecasting turning points in international output growth rates using Bayesian exponentially weighted autoregression, time-varying parameter, and pooling techniques (with Arnold Zellner and Chung-ki Min) **49** (1991) 275–304
Hsiao, Cheng
A statistical perspective on insurance rate-making (with Changseob Kim and Grant Taylor) **44** (1990) 5–24
Consistent estimation for some nonlinear errors-in-variables models **41** (1989) 159–185
Huang, Z.M.
Polyhedral cone-ratio DEA models with an illustrative application to large commercial banks (with A. Charnes, W.W. Cooper, and D.B. Sun) **46** (1990) 73–91
Hylleberg, S.
Seasonal integration and cointegration (with R.F. Engle, C.W.J. Granger, and B.S. Yoo) **44** (1990) 215–238

Ichimura, Hidehiko
Identification and estimation of polynomial errors-in-variables models (with Jerry A. Hausman, Whitney K. Newey, and James L. Powell) **50** (1991) 273–295
Ingram, Beth Fisher
Simulation estimation of time-series models (with Bong-Soo Lee) . . **47** (1991) 197–205

Jayet, H.
Analysis of survival data: Estimation and specification tests using asymptotic least squares (with A. Moreau) **48** (1991) 263–285
Johnson, J.D.
A general functional form for approximating the Lorenz curve (with R.L. Basmann, K.J. Hayes, and D.J. Slottje) **43** (1990) 77–90
Jorgensen, Dale W.
Inequality and the standard of living (with Daniel T. Slesnick) **43** (1990) 103–120
Judge, George G.
An adaptive empirical Bayes estimator of the multivariate normal means under quadratic loss (with R. Carter Hill and M.E. Bock) . **44** (1990) 189–213
Some risk results for a two-stage pre-test estimator in the case of possible heteroskedasticity (with Ahmet Ozcam) **48** (1991) 355–371

Kapteyn, Arie
Estimation of the error-components model with incomplete panels (with Tom Wansbeek) **41** (1989) 341–361
Kelejian, Harry H.
A note concerning specifications of interactive random-coefficient regression models (with Joseph P. Gatto and Scott W. Stephan) **47** (1991) 273–284

Kemp, Gordon C.R.
On Wald tests for globally and locally quadratic restrictions **50** (1991) 257–272
Kennedy, Peter
Fighting the teflon factor: Comparing classical and Bayesian estimators for autocorrelated errors (with Daniel Simons) **48** (1991) 15–27
Khazzoom, J. Daniel
A note on the application of the non-linear two-stage least-squares estimator to a Box-Cox transformed model **42** (1989) 377–379
Kim, Changseob
A statistical perspective on insurance rate-making (with Cheng Hsiao and Grant Taylor) **44** (1990) 5–24
Kinal, Terrence
A note on the existence of moments of k-class estimators when k is negative **48** (1991) 409–410
King, Maxwell L.
Diagnostic testing (edited with Grant H. Hillier). Annals 1991-1 . . . . **47** (1991) 1–194
Editors' introduction. Diagnostic testing (with Grant H. Hillier). Annals 1991-1 . . . . . **47** (1991) 1–4
Optimal invariant tests for the autocorrelation coefficient in linear regressions with stationary or nonstationary AR(1) errors (with Jean-Marie Dufour) **47** (1991) 115–143
Small-disturbance asymptotics and the Durbin-Watson and related tests in the dynamic regression model (with Ping X. Wu) **47** (1991) 145–152
Testing for fourth-order autocorrelation in regression disturbances when first-order autocorrelation is present **41** (1989) 285–301
Kobayashi, Masahito
Mallows' C(p) criterion and unbiasedness of model selection (with Shinichi Sakata) **45** (1990) 385–395
Koop, Gary
Cointegration tests in present value relationships: A Bayesian look at the bivariate properties of stock prices and dividends **49** (1991) 105–139
Kooreman, Peter
Coherency of the indirect translog demand system with binding nonnegativity constraints (with Arthur van Soest) **44** (1990) 391–400
Kopp, Raymond J.
Moment-based estimation and testing of stochastic frontier models (with John Mullahy) **46** (1990) 165–183
Kramer, Walter
Finite sample power of linear regression autocorrelation tests (with Helmut Zeisel) **43** (1990) 363–372
Krol, Robert
The impact of stochastic and deterministic trends on money-output causality: A multi-country investigation (with Lee E. Ohanian) . . **45** (1990) 291–308
Kumbhakar, Subal C.
Production frontiers, panel data, and time-varying technical inefficiency **46** (1990) 201–211

Langemeier, Larry N.
The role of multiplier bounds in efficiency analysis with application to Kansas farming (with Russell G. Thompson, Chih-Tah Lee, Euntaik Lee, and Robert M. Thrall) **46** (1990) 93–108
Lassere, Pierre
The measurement of productivity and scarcity rents: The case of asbestos in Canada (with Pierre Ouellette) **48** (1991) 287–312
Lawrence, Denis
An adjustment-costs model of export supply and import demand . . . **46** (1990) 381–398

Lee, Bong-Soo
Simulation estimation of time-series models (with Beth Fisher Ingram) **47** (1991) 197–205
Lee, Chih-Tah
The role of multiplier bounds in efficiency analysis with application to Kansas farming (with Russell G. Thompson, Larry N. Langemeier, Euntaik Lee, and Robert M. Thrall) **46** (1990) 93–108
Lee, Euntaik
The role of multiplier bounds in efficiency analysis with application to Kansas farming (with Russell G. Thompson, Larry N. Langemeier, Chih-Tah Lee, and Robert M. Thrall) **46** (1990) 93–108
Lee, Myoung-jae
Mode regression **42** (1989) 337–349
Lehmann, Bruce N.
Residual risk revisited **45** (1990) 71–97
Lerman, Robert I.
Improving the accuracy of estimates of Gini coefficients (with Shlomo Yitzhaki) **42** (1989) 43–47
Leung, Siu Fai
Nonparametric hazard estimation with time-varying discrete covariates (with Wing Hung Wong) **45** (1990) 309–330
Lewbel, Arthur
Income distribution movements and aggregate money illusion **43** (1990) 35–42
The information content of equivalence scales (with Richard Blundell) **50** (1991) 49–68
Lewin, Arie Y.
Editors' introduction. Frontier analysis: Parametric and nonparametric approaches (with C.A. Knox Lovell). Annals 1990-4 . . . . . **46** (1990) 3–5
Frontier analysis: Parametric and nonparametric approaches (edited with C.A. Knox Lovell). Annals 1990-4 . . . . . **46** (1990) 1–245
Li, Qi
A transformation that will circumvent the problem of autocorrelation in an error-component model (with Badi H. Baltagi) **48** (1991) 385–393
Lo, Andrew W.
An econometric analysis of nonsynchronous trading (with A. Craig MacKinlay) **45** (1990) 181–211
Loretan, Mico
The Durbin-Watson ratio under infinite-variance errors (with Peter C.B. Phillips) **47** (1991) 85–114
Lovell, C.A. Knox
Editors' introduction. Frontier analysis: Parametric and nonparametric approaches (with Arie Y. Lewin). Annals 1990-4 . . . . . **46** (1990) 3–5
Frontier analysis: Parametric and nonparametric approaches (edited with Arie Y. Lewin). Annals 1990-4 . . . . . **46** (1990) 1–245
Measuring cost efficiency in banking: Econometric and linear programming evidence (with Gary D. Ferrier) **46** (1990) 229–245
Lutkepohl, Helmut
A note on the asymptotic distribution of impulse response functions of estimated VAR models with orthogonal residuals **42** (1989) 371–376

Maasoumi, Esfandiar
Cluster analysis for measuring welfare and quality of life across countries (with Joseph G. Hirschberg and Daniel J. Slottje) **50** (1991) 131–150
Continuously distributed attributes and measures of multivariate inequality **42** (1989) 131–144
Editor's introduction. The measurement and analysis of welfare. Annals 1991-3 . . . . . **50** (1991) 1–5

Generalized entropy measures of mobility for different sexes and income levels (with Sourushe Zandvakili) **43** (1990) 121–133
How to live with misspecification if you must **44** (1990) 67–86
The measurement and analysis of welfare. Editor. Annals 1991-3 . . . **50** (1991) 1–228
MacKinlay, A. Craig
An econometric analysis of nonsynchronous trading (with Andrew W. Lo) **45** (1990) 181–211
Madan, Dilip B.
A note on the estimation of nonsymmetric dynamic factor demand models (with Ingmar R. Prucha) **42** (1989) 275–283
Magdalinos, Michael A.
The classical principles of testing using instrumental variables estimates **44** (1990) 241–279
Magnus, Jan R.
The exact multi-period mean-square forecast error for the first-order autoregressive model with an intercept (with Bahram Pesaran) . . **42** (1989) 157–179
Maindiratta, Ajay
Largest size-efficient scale and size efficiencies of decision-making units in data envelopment analysis **46** (1990) 57–72
Manton, Kenneth G.
Statistical and measurement issues in assessing the welfare status of aged individuals and populations (with Max A. Woodbury and Eric Stallard) **50** (1991) 151–181
May, Laurie
Personal characteristics, unemployment insurance, and the duration of unemployment (with Dean A. Follmann and Matthew S. Goldberg) **45** (1990) 351–366
Mayer, Walter J.
Estimating disequilibrium models with limited a priori price-adjustment information **41** (1989) 303–320
McCulloch, Robert
A Bayesian approach to testing the arbitrage pricing theory (with Peter E. Rossi) **49** (1991) 141–168
McDonald, James B.
Regression models for positive random variables (with Richard J. Butler) **43** (1990) 227–251
Using incomplete moments to measure inequality (with Richard J. Butler) **42** (1989) 109–119
Melino, Angelo
Econometric methods and financial time series (edited with John Y. Campbell). Annals 1990-3 . . . . . **45** (1990) 1–290
Editors' introduction. Econometric methods and financial time series (with John Y. Campbell). Annals 1990-3 . . . . . **45** (1990) 1–5
Pricing foreign currency options with stochastic volatility (with Stuart M. Turnbull) **45** (1990) 239–265
Mikhail, William M.
On a pooled estimator and its finite-sample moments (with G.A. Ghazal) **48** (1991) 195–214
Min, Chung-ki
Forecasting turning points in international output growth rates using Bayesian exponentially weighted autoregression, time-varying parameter, and pooling techniques (with Arnold Zellner and Chansik Hong) **49** (1991) 275–304
Mooijaart, Ab
Estimation of regression coefficients with the help of characteristic functions (with Kees van Montfort and Jan de Leeuw) **41** (1989) 267–278
Moreau, A.
Analysis of survival data: Estimation and specification tests using asymptotic least squares (with H. Jayet) **48** (1991) 263–285

Moulton, Brent R.
A Bayesian approach to regression selection and estimation, with application to a price index for radio services **49** (1991) 169–193
Mullahy, John
Moment-based estimation and testing of stochastic frontier models (with Raymond J. Kopp) **46** (1990) 165–183

Nabeya, Seiji
Limiting power of unit-root tests in time-series regression (with Katsuto Tanaka) **46** (1990) 247–271
Nawata, Kazumitsu
Robust estimation based on grouped-adjusted data in censored regression models **43** (1990) 337–362
Robust estimation based on grouped-adjusted data in linear regression models **43** (1990) 317–336
Nayak, Tapan K.
Statistical properties of between-group income differentials (with Joseph L. Gastwirth and Jane-Ling Wang) **42** (1989) 5–19
Nelson, Daniel B.
ARCH models as diffusion approximations **45** (1990) 7–38
Newey, Whitney K.
Identification and estimation of polynomial errors-in-variables models (with Jerry A. Hausman, Hidehiko Ichimura, and James L. Powell) **50** (1991) 273–295
Ng, Victor K.
Asset pricing with a FACTOR-ARCH covariance structure: Empirical estimates for Treasury bills (with Robert F. Engle and Michael Rothschild) **45** (1990) 213–237
Nieswiadomy, M.
On the empirical relationship between several well-known inequality measures (with D.J. Slottje and R.L. Basmann) **42** (1989) 49–66
Nijman, Theo
Estimation of time-dependent parameters in linear models using cross-sections, panels, or both (with Marno Verbeek) **46** (1990) 333–346
The efficiency of rotating-panel designs in an analysis-of-variance model (with Marno Verbeek and Arthur van Soest) **49** (1991) 373–399
Nygard, Fredrik
Income inequality measures based on sample surveys (with Arne Sandstrom) **42** (1989) 81–95

Ohanian, Lee E.
The impact of stochastic and deterministic trends on money-output causality: A multi-country investigation (with Robert Krol) **45** (1990) 291–308
Ohtani, Kazuhiro
On estimating and testing in a linear regression model with autocorrelated errors **44** (1990) 333–346
Orme, Chris
The small-sample performance of the information-matrix test **46** (1990) 309–331
Osborn, Denise R.
The implications of periodically varying coefficients for seasonal time-series processes **48** (1991) 373–384
Osiewalski, Jacek
A note on Bayesian inference in a regression model with elliptical errors **48** (1991) 183–193
Ouellette, Pierre
The measurement of productivity and scarcity rents: The case of asbestos in Canada (with Pierre Lassere) **48** (1991) 287–312

Ozcam, Ahmet
Some risk results for a two-stage pre-test estimator in the case of possible heteroskedasticity (with George G. Judge) **48** (1991) 355–371

Pagan, Adrian R.
Alternative models for conditional stock volatility (with G. William Schwert) **45** (1990) 267–290
Pantula, Sastry G.
Testing for unit roots in autoregressive moving average models: An instrumental variable approach (with Alastair Hall) **48** (1991) 325–353
Peracchi, Franco
Bounded-influence estimators for the SURE model **48** (1991) 119–134
Bounded-influence estimators for the Tobit model **44** (1990) 107–126
Pesaran, Bahram
The exact multi-period mean-square forecast error for the first-order autoregressive model with an intercept (with Jan R. Magnus) ... **42** (1989) 157–179
Pesaran, M. Hashem
A unified approach to estimation and orthogonality tests in linear single-equation econometric models (with Richard J. Smith) **44** (1990) 41–66
Peters, Simon
Distributional specification tests against semi-parametric alternatives (with Richard J. Smith) **47** (1991) 175–194
Phillips, Peter C.B.
The Durbin-Watson ratio under infinite-variance errors (with Mico Loretan) **47** (1991) 85–114
Phillips, Robert F.
A constrained maximum-likelihood approach to estimating switching regressions **48** (1991) 241–262
Picci, Giorgio
Parametrization of factor analysis models **41** (1989) 17–38
Poirier, Dale J.
Bayesian empirical studies in economics and finance. Editor. Annals 1991-2 ..... **49** (1991) 1–304
Editor's introduction. Bayesian empirical studies in economics and finance. Annals 1991-2 ..... **49** (1991) 1–4
Pollak, Robert A.
The likelihood dominance criterion: A new approach to model selection (with Terence J. Wales) **47** (1991) 227–242
Welfare comparisons and situation comparisons **50** (1991) 31–48
Porter-Hudak, Susan
A numerical methods approach to calculating cost-of-living indices (with Kathy Hayes) **50** (1991) 91–105
Is size distribution of income a random walk? (with Kathy Hayes, Gerald Scully, and D.J. Slottje) **43** (1990) 213–226
Powell, James L.
Identification and estimation of polynomial errors-in-variables models (with Jerry A. Hausman, Whitney K. Newey, and Hidehiko Ichimura) **50** (1991) 273–295
Prucha, Ingmar R.
A note on the estimation of nonsymmetric dynamic factor demand models (with Dilip B. Madan) **42** (1989) 275–283

Rayner, Janne
Another look at the identification of current rational-expectations models **47** (1991) 305–331

Reiss, Peter C.
Detecting multiple outliers with an application to R&D productivity **43** (1990) 293–315
Empirical models of discrete games (with Timothy F. Bresnahan) . . . **48** (1991) 57–81
Richard, Jean-Francois
Bayesian multivariate exogeneity analysis: An application to a UK money demand equation (with Mark F.J. Steel) **49** (1991) 239–274
Ridder, G.
Pooling states in the multinominal logit model (with J.S. Cramer) . . . **47** (1991) 267–272
Robinson, P.M.
Testing for strong serial correlation and dynamic conditional heteroskedasticity in multiple regression **47** (1991) 67–84
Rosenzweig, Mark R.
Inequality at birth: The scope for policy intervention (with Kenneth I. Wolpin) **50** (1991) 205–228
Rossi, Peter E.
A Bayesian approach to testing the arbitrage pricing theory (with Robert McCulloch) **49** (1991) 141–168
Rothenberg, Thomas J.
Simultaneous equations with covariance restrictions (with Paul A. Ruud) **44** (1990) 25–39
Rothschild, Michael
Asset pricing with a FACTOR-ARCH covariance structure: Empirical estimates for Treasury bills (with Robert F. Engle and Victor K. Ng) **45** (1990) 213–237
Rothwell, Geoffrey S.
Risk and reactor safety systems adoption (with Jeffrey A. Dubin) . . . **42** (1989) 201–218
Ruud, Paul A.
Extensions of estimation methods using the EM algorithm **49** (1991) 305–341
Simultaneous equations with covariance restrictions (with Thomas J. Rothenberg) **44** (1990) 25–39

Sakata, Shinichi
Mallows' C(p) criterion and unbiasedness of model selection (with Masahito Kobayashi) **45** (1990) 385–395
Said, Said E.
Unit-root test for time-series data with a linear time trend **47** (1991) 285–303
Saikkonen, Pentti
Asymptotic relative efficiency of the classical test statistics under misspecification **42** (1989) 351–369
Sandstrom, Arne
Income inequality measures based on sample surveys (with Fredrik Nygard) **42** (1989) 81–95
Schmidt, Peter
Production frontiers with cross-sectional and time-series variation in efficiency levels (with Christopher Cornwell and Robin C. Sickles) **46** (1990) 185–200
Three-stage least squares with different instruments for different equations **43** (1990) 389–394
Schotman, Peter
A Bayesian analysis of the unit root in real exchange rates (with Herman K. van Dijk) **49** (1991) 195–238
Schwert, G. William
Alternative models for conditional stock volatility (with Adrian R. Pagan) **45** (1990) 267–290

Scully, Gerald
Is size distribution of income a random walk? (with Kathy Hayes, Susan Porter-Hudak, and D.J. Slottje) **43** (1990) 213–226
Segerson, Kathleen
On the measurement of economic capacity utilization for multi-product industries (with Dale Squires) **44** (1990) 347–361
Seiford, Lawrence M.
Recent developments in DEA: The mathematical programming approach to frontier analysis (with Robert M. Thrall) **46** (1990) 7–38
Sen, Amartya
Welfare, preference and freedom **50** (1991) 15–29
Sengupta, Jati K.
Transformations in stochastic DEA models **46** (1990) 109–123
Serletis, Apostolos
A dispersion-dependency diagnostic test for aggregation error: With applications to monetary economics and income distribution (with William A. Barnett) **43** (1990) 5–34
Shanken, Jay
Intertemporal asset pricing: An empirical investigation **45** (1990) 99–120
Sharma, Subhash C.
Power and robustness of jackknife and likelihood-ratio tests for grouped heteroscedasticity (with Carmelo Giaccotto) **49** (1991) 343–372
Shefrin, H.M.
Aggregation and identification in consumer demand systems (with J.M. Heineke) **44** (1990) 377–390
Shorrocks, A.F.
Optimal grouping of income and wealth data (with J.B. Davies) **42** (1989) 97–108
Sickles, Robin C.
Black-white mortality inequalities (with Jere R. Behrman, Paul Taubman, and Abdo Yazbeck) **50** (1991) 183–203
Production frontiers with cross-sectional and time-series variation in efficiency levels (with Christopher Cornwell and Peter Schmidt) **46** (1990) 185–200
Silver, J. Lew
Testing Slutsky symmetry in systems of linear demand equations (with Mukhtar M. Ali) **41** (1989) 251–266
Simon, Curtis J.
A multinomial probability model of size income distribution (with Charles A. Diamond and John T. Warner) **43** (1990) 43–61
Simons, Daniel
Fighting the teflon factor: Comparing classical and Bayesian estimators for autocorrelated errors (with Peter Kennedy) **48** (1991) 15–27
Singh, Balvir
Bootstrapping in multiplicative models (with M.S. Srivastava) **42** (1989) 287–297
Slade, Margaret E.
Modeling stochastic and cyclical components of technical change: An application of the Kalman filter **41** (1989) 363–383
Slesnick, Daniel T.
Inequality and the standard of living (with Dale W. Jorgensen) **43** (1990) 103–120
Inflation, relative price variation, and inequality **43** (1990) 135–151
Normative index numbers **50** (1991) 107–130
Slottje, Daniel
A general functional form for approximating the Lorenz curve (with R.L. Basmann, K.J. Hayes, and J.D. Johnson) **43** (1990) 77–90
Cluster analysis for measuring welfare and quality of life across countries (with Joseph G. Hirschberg and Esfandiar Maasoumi) . **50** (1991) 131–150

Econometric issues in analyzing inequality—Part I: Estimation. Editor. Annals 1989-3 . . . . . **42** (1989) 1–155
Econometric issues in analyzing inequality—Part II: Modeling methods. Editor. Annals 1990-1 . . . . . **43** (1990) 1–251
Editor's introduction. Econometric issues in analyzing inequality—Part I: Estimation. Annals 1989-3 . . . . . **42** (1989) 1–3
Editor's introduction: Econometric issues in analyzing inequality—Part II: Modeling methods. Annals 1990-1 . . . . . **43** (1990) 1–3
Is size distribution of income a random walk? (with Kathy Hayes, Susan Porter-Hudak, and Gerald Scully) **43** (1990) 213–226
On the empirical relationship between several well-known inequality measures (with R.L. Basmann and M. Nieswiadomy) **42** (1989) 49–66
Remembrance of things past the distribution of earnings across occupations and the kappa criterion (with Joseph G. Hirschberg) **42** (1989) 121–130

Smith, Richard J.
A unified approach to estimation and orthogonality tests in linear single-equation econometric models (with M. Hashem Pesaran) . **44** (1990) 41–66
Distributional specification tests against semi-parametric alternatives (with Simon Peters) **47** (1991) 175–194

Soofi, Ehsan S.
Effects of collinearity on information about regression coefficients . . **43** (1990) 255–274

Souza, Geraldo
On the asymptotic normality of Fourier flexible form estimates (with A. Ronald Gallant) **50** (1991) 329–353

Spanos, Aris
The simultaneous-equations model revisited: Statistical adequacy and identification **44** (1990) 87–105

Squires, Dale
On the measurement of economic capacity utilization for multi-product industries (with Kathleen Segerson) **44** (1990) 347–361

Srivastava, M.S.
Bootstrapping in multiplicative models (with Balvir Singh) **42** (1989) 287–297

St. Louis, Robert D.
A note on Park and Heikes' (1983) modified approximate estimator for the first-order moving-average process (with Askar H. Choudhury) **46** (1990) 399–406

Stallard, Eric
Statistical and measurement issues in assessing the welfare status of aged individuals and populations (with Kenneth G. Manton and Max A. Woodbury) **50** (1991) 151–181

Steel, Mark F.J.
A Bayesian analysis of simultaneous equation models by combining recursive analytical and numerical approaches **48** (1991) 83–117
Bayesian multivariate exogeneity analysis: An application to a UK money demand equation (with Jean-Francois Richard) **49** (1991) 239–274

Steinberg, Dan
Induced work participation and the returns to experience for welfare women: Evidence from a social experiment **41** (1989) 321–340

Stephan, Scott W.
A note concerning specifications of interactive random-coefficient regression models (with Joseph P. Gatto and Harry H. Kelejian) **47** (1991) 273–284

Stock, James H.
Estimating integrated higher-order continuous time autoregressions with an application to money-income causality (with A.C. Harvey) **42** (1989) 319–336

Sun, D.B.
Polyhedral cone-ratio DEA models with an illustrative application to large commercial banks (with A. Charnes, W.W. Cooper, and Z.M. Huang) **46** (1990) 73–91

Tanaka, Katsuto
Limiting power of unit-root tests in time-series regression (with Seiji Nabeya) **46** (1990) 247–271
Taubman, Paul
Black-white mortality inequalities (with Jere R. Behrman, Robin Sickles, and Abdo Yazbeck) **50** (1991) 183–203
Tauchen, George
Using conditional moments of asset payoffs to infer the violatility of intertemporal marginal rates of substitution (with A. Ronald Gallant and Lars Peter Hansen) **45** (1990) 141–179
Taylor, Grant
A statistical perspective on insurance rate-making (with Cheng Hsiao and Changseob Kim) **44** (1990) 5–24
Theil, Henri
The development of international inequality: 1960–1985 . . . . . **42** (1989) 145–155
Thompson, Russell G.
The role of multiplier bounds in efficiency analysis with application to Kansas farming (with Larry N. Langemeier, Chih-Tah Lee, Euntaik Lee, and Robert M. Thrall) **46** (1990) 93–108
Thrall, Robert M.
Recent developments in DEA: The mathematical programming approach to frontier analysis (with Lawrence M. Seiford) **46** (1990) 7–38
The role of multiplier bounds in efficiency analysis with application to Kansas farming (with Russell G. Thompson, Larry N. Langemeier, Chih-Tah Lee, and Euntaik Lee) **46** (1990) 93–108
Tinbergen, Jan
On the measurement of welfare **50** (1991) 7–13
Trivedi, Pravin K.
Regression-based tests for overdispersion in the Poisson model (with A. Colin Cameron) **46** (1990) 347–364
Tsurumi, Hiroki
Mean squared errors of forecast for selecting nonnested linear models and comparison with other criteria (with Hajime Wago) **48** (1991) 215–240
Turkington, Darrell A.
Classical tests for contemporaneously uncorrelated disturbances in the linear simultaneous equations model **42** (1989) 299–317
Turnbull, Stuart M.
Pricing foreign currency options with stochastic volatility (with Angelo Melino) **45** (1990) 239–265

Uhlig, Harald F.
Reasonable extreme-bounds analysis (with Clive W.J. Granger) **44** (1990) 159–170

van Dijk, Herman K.
A Bayesian analysis of the unit root in real exchange rates (with Peter Schotman) **49** (1991) 195–238
van Montfort, Kees
Estimation of regression coefficients with the help of characteristic functions (with Ab Mooijaart and Jan de Leeuw) **41** (1989) 267–278
van Praag, Bernard M.S.
Elliptical multivariate analysis (with Bertram M. Wesselman) **41** (1989) 189–203
Ordinal and cardinal utility: An integration of the two dimensions of the welfare concept **50** (1991) 69–89
The poverty concept when prices are income-dependent (with Michael R. Baye) **43** (1990) 153–166

van Soest, Arthur
Coherency of the indirect translog demand system with binding nonnegativity constraints (with Peter Kooreman) **44** (1990) 391–400
The efficiency of rotating-panel designs in an analysis-of-variance model (with Theo Nijman and Marno Verbeek) **49** (1991) 373–399
Varian, Hal R.
Goodness-of-fit in optimizing models **46** (1990) 125–140
Verbeek, Marno
Estimation of time-dependent parameters in linear models using cross-sections, panels, or both (with Theo Nijman) **46** (1990) 333–346
The efficiency of rotating-panel designs in an analysis-of-variance model (with Theo Nijman and Arthur van Soest) **49** (1991) 373–399

Wago, Hajime
Mean squared errors of forecast for selecting nonnested linear models and comparison with other criteria (with Hiroki Tsurumi) **48** (1991) 215–240
Wales, Terence J.
The likelihood dominance criterion: A new approach to model selection (with Robert A. Pollak) **47** (1991) 227–242
Wang, Jane-Ling
Statistical properties of between-group income differentials (with Joseph L. Gastwirth and Tapan K. Nayak) **42** (1989) 5–19
Wansbeek, Tom
Estimation of the error-components model with incomplete panels (with Ari Kapteyn) **41** (1989) 341–361
Warner, John T.
A multinomial probability model of size income distribution (with Charles A. Diamond and Curtis J. Simon) **43** (1990) 43–61
Watson, Mark W.
Recursive solution methods for dynamic linear rational expectations models **41** (1989) 65–89
Weiss, Andrew A.
Least absolute error estimation in the presence of serial correlation . **44** (1990) 127–158
Multi-step estimation and forecasting in dynamic models **48** (1991) 135–149
Wesselman, Bertram M.
Elliptical multivariate analysis (with Bernard M.S. van Praag) **41** (1989) 189–203
Wolak, Frank A.
Testing inequality constraints in linear econometric models **41** (1989) 205–235
Wolf, Douglas
A random-effects logit model of work-welfare transactions (with John Enberg and Peter Gottschalk) **43** (1990) 63–75
Wolfe, Michael
Seminonparametric Bayesian estimation of the asymptotically ideal production models (with William A. Barnett and John Geweke) . **49** (1991) 5–50
Wolff, Edward N.
Methodological issues in the estimation of the size distribution of household wealth **43** (1990) 179–195
Wolpin, Kenneth I.
Inequality at birth: The scope for policy intervention (with Mark R. Rosenzweig) **50** (1991) 205–228
Wong, Wing Hung
Nonparametric hazard estimation with time-varying discrete covariates (with Siu Fai Leung) **45** (1990) 309–330

Woodbury, Max A.
Statistical and measurement issues in assessing the welfare status of aged individuals and populations (with Kenneth G. Manton and Eric Stallard) **50** (1991) 151–181
Wooldridge, Jeffrey M.
An encompassing approach to conditional mean tests with applications to testing nonnested hypotheses **45** (1990) 331–350
On the application of robust, regression-based diagnostics to models of conditional means and conditional variances **47** (1991) 5–46
Specification testing and quasi-maximum-likelihood estimation **48** (1991) 29–55
Wu, Ping X.
Small-disturbance asymptotics and the Durbin-Watson and related tests in the dynamic regression model (with Maxwell L. King) . . . **47** (1991) 145–152

Yazbeck, Abdo
Black-white mortality inequalities (with Jere R. Behrman, Robin Sickles, and Paul Taubman) **50** (1991) 183–203
Yitzhaki, Shlomo
Improving the accuracy of estimates of Gini coefficients (with Robert I. Lerman) **42** (1989) 43–47
Yoo, B.S.
Seasonal integration and cointegration (with S. Hylleberg, R.F. Engle, and C.W.J. Granger) **44** (1990) 215–238

Zandvakili, Sourushe
Generalized entropy measures of mobility for different sexes and income levels (with Esfandiar Maasoumi) **43** (1990) 121–133
Zeisel, Helmut
Finite sample power of linear regression autocorrelation tests (with Walter Kramer) **43** (1990) 363–372
Zellner, Arnold
Forecasting turning points in international output growth rates using Bayesian exponentially weighted autoregression, time-varying parameter, and pooling techniques (with Chansik Hong and Chung-ki Min) **49** (1991) 275–304
Zinde-Walsh, Victoria
Estimation of a linear regression model with stationary ARMA(p, q) errors (with John W. Galbraith) **47** (1991) 333–357
